I am looking for a Hallicrafters speaker for a SX-71 radio. Maybe somebody can tell me if such a speaker was made for this radio or if you just had to find one on your own.

Actually, in all probability, the correct answer is "e"-- none of the above.

I, too have found much better prices on the same items. And, yes, I have
bought them there.
He did make some valid points.

Eimac is out of the 3-500z business, and if you can find a set of Amperex graphites, grab them if you can stand the cost at all. There's none better-including Eimacs.

> cabinets, chassis etc.
> Thanks for any help!
> Chassis: Safest is plain water, or gentle soap and water. Dry thoroughly and DO NOT let it get to tube sockets or transformers of any kind. If you really want to cut the crub, use something like Tilex or scrubbing bubbles cleaners. It really brings a shine to old cad plate. HOWEVER, this is a HIGHLY IONIC cleaner and can result in disaster if it gets on paper or phenolic--it does not go away when it dries and can result in shorts. There have been lots of sad stories about folks spraying this into transformers, resulting in lots of smoke.

Case: Wrinkle: GoJo hand cleaner and a toothbrush, followed by thorough rinse and Tannery spray.
Smooth: GoJo or Tilex or dishwashing soap, rinse. Polish with car polish, I use Blue Coral, works great.

Plastic surfaces: Try the Blue coral swirl remover and glaze. Works great.

Jake,

I actually had two of these things. They did drift but I know there were some mods published about how to correct it. All things considered though, they were the Yugo of the Amateur Radio world. Cheap, worked after a fashion, and throw away when you could afford something better.

Any commodity is worth different amounts to different people. If the tubes sold at the asking prices, then the buyer must have thought the price was fair. I agree that you can look and probably find a better price on almost everything advertised in the NG (the 75A-4 comes to mind) but I know that if I find a piece of equipment at a price I am comfortable with based on what I know about the market, I will inquire about making a deal. If I know the price to be out of line, I just won't respond. There are some postings here for equipment that is, by most standards, way overpriced. The recent posts for the "Drake Museum" equipment comes to mind. But I am willing to bet that somebody bought something at listed prices as a result of those posts. Just market forces at work...

Hi Bob,
I hope you sold your 1011 to another ham, for I'd hate to believe that
you, as a licensed amateur, would sell gear knowing that it was going
to be used in an unlawful manner. The 1011 is one of those "make believe"
amateur rigs; the model number, 1011, of course means 10m 11m.

It's not really a "boatanchors" so it's out of place on r.r.a.b.

Source record: 102709

Per Jeff, KH2PZ, the Siltronics 1011 series were just "pretend" 10 meter radios, and therefore not appropriate for the Boatanchors post.

I sure am glad he let us know...all those years I had one as a back-up rig so I could listen for openings on 10 while working other bands.

Geez, sure glad I never got caugt with a "pretend" radio...Although I got some pretty fair DX QSL cards from it...Seems a shame though. Big ol' heavy thing like that sure could pass for a "boatanchor" by my definition.

Anyway, thanks Jeff for keeping the rest of us out of trouble and on the straight and narrow! I guess I should throw away those two Cobra rigs I put on 10 FM...

Message-ID: <35A45456.1B8E@plix.com>
Source record: 102714

I traded one of these for an SBE-34 and made out like a bandit (even
though the '34 had to be fixed) and the '34 was a cheap radio. I paid $90
for the 753 even though the store owner advised me AGAINST buying it.

It was a "pretty" enough radio but, unfortunately, like many kits, this
one would remain a piece of junk forever.

I think someone misplaced the decimal point on the price.

gentlemen,

if you don't like the guy's prices for the tubes, DON'T BUY THEM!!!! there are SEVERAL companies and private persons who sell new and used tubes.

you know, this is the beautiful thing about the internet, it's a one side deal. i read something because i choose to. i BUY something because i CHOOSE to. i'm not going to slam someone in front of the internet public because i think they ask too much for their equipment. do each of you not own something that is "near and dear to your heart" and you think it is worth more than the average person? of course, we all do. now, would you want me, in front of all who choose to read, to slam you about the price of said equipment if you offered it for sale? same principle applies. one man's junk is another man's treasure (just ask my wife. my shack reminds her of sanford and son!).

so let's get on with it and talk about or advertise for sale the glorious tube equipment we all love. and if you don't like the price, click the down arrow and move on.

the opinions expressed are soley those of the writer.

73 and have a good day!

RAF airman's uniform!

If it is of any interest, I survived that incident, but shortly afterwards the SIB (Special Investigation Branch) of the RAF Police came to visit me. It seems that the GPO had a few photographs of me at a couple of meet's plus loads of photographs, but the RAF would not let them have access to the camp area so they could not get any physical evidence. I went silent after the meet you mentioned (probably through fear), but they did not have enough to "do" me, so they handed all they had to the SIB.

The SIB came down on me and searched all my stuff in the barrack rooms, but they missed the No19 set in my suitcase in the baggage room! But they searched everything else. They even broke open my cash-savings box but all they found was money in that. I remember thinking that there was a bare lamp in the room in which I was questioned, and both the "dicks" were plain clothes. I remember thinking that it all looked like something from the "Untouchables".

In my locker they found an aluminium chassis with a PI matching circuit (variable capacitors and a bog-roll of wire) mounted on it, a crystal socket and a couple of valves fitted. The radio engineer from the Ground Radio Servicing Center (an impartial witness) confirmed that the circuit had absolutely nothing to do with wireless or transmitting and was probably a record-player amplifier or something that I was building. My old chief was not such a bad guy after all.

So, now you know the whole sordid details. It is a fact that many radio amateurs have used a microphone long before they were licenced, although few will admit it (as I do!). It is just one of those things, if one is truly interested in amateur radio and not simply an operator, then there will almost certainly have been some "playing" in earlier days. What about you Walt? I think that the true figures for must be in the region of 15 - 30% although if you wre to consider the period just before the legalisation of CB in the UK then the figures would be very much higher. You watch Walt, I'll bet that there will be some denials to this newsgroup.

When I was 15 years old I built my first transmitter. 1220 KHz AM and modulated it from the anode of the record player tube. My brother and I went over the fields listening to the signal on my dad's Fergusson "tranny" wireless set. Suddenly the modulation stopped so we hurried home more than five miles, thinking that something had blown up. It was a bit of a bodge, but it worked.

There had been a "visitation" and the parties concerned demanded to look around as my dad denied having a wireless transmitter in the house. He knew we had done something so he pulled out the plug from the record player. The 20 watt carrier was generated by an 807 bottle which was laying on it's side on the table amid a pile of stripped radio components etc. The "visitors" must have been looking for a big black box with TRANSMITTER written on the front, or something, because they couldn't see it. It was right in front of their noses.

I don't mind you or anyone else knowing all about this because I think it is fun to look back on these incidents. It may have been a bit worrying during all three incidents but I think I can look back and laugh. It happened, no-one can do anything about it now, and luckily, I was never actually convicted of anything. Yep those were the days. Anyway, I loose my internet connection the day after tomorrow so instead of writing this I will go and see if I can hook a few more simpletons with sweeping statements. I have already managed a few this week.

Best regards, Harry (SM0VPO / G4VVJ / G8TGL / EL84)

First Posting ï¿½ July 2, 1998
Second Posting ï¿½ July 5, 1998
Third Posting ï¿½ July 8, 1998

Greetings:

The following items are available from the estate of George Photakos, W4UIE, who died in the fall of 1996. George was actively hamming with the below-listed radio and amplifier at the time of his death. The equipment appears to be in very good condition.

Bids will be accepted by e-mail only through July 9, 1998. Send your bids to: ko4xb@juno.com

The minimum bid is posted beside each item. All-or-none bids will not be accepted. Items are available for inspection by contacting ko4xb@juno.com. Questions concerning any of this equipment should be addressed to ko4xb@juno.com. All items are FOB Richmond, VA and will be shipped at the bidder's expense for shipping and packaging. Cash, cashier's check, or money order will be accepted from the successful bidder(s) who will be notified on or about July 10.

Bidder's should provide name, address, call sign (if any), and phone number with returned bid(s).

1. Swan 350 HF transceiver, with power supply. Manual is available. Minimum bid is $175.

2. Hammarlund HXL-one linear for 10, 15, 20, 40, 75/80. 1.5kw PEP SSB input; 500w PEP for AM; 600w PEP for controlled carrier AM/RTTY. This amplifier comes with two new, in-the-box 572B finals. Manual is available. Minimum bid is $175.

3. Hustler RM80 80 meter resonator with whip. Minimum bid is $20.

4. Hustler RM40 40 meter resonator with whip. Minimum bid is $15.

5. Hustler RM15 15 meter resonator with whip. Minimum bid is $11.

6. Hustler RM10 10 meter resonator with whip. Minimum bid is $11.

7. Antenna Specialists two meter magmount antenna. Without bottom weather seal/strip. Minimum bid is $10.

8. Elecro-Voice 664 desk microphone, without cable or manual. Minimum bid is $25.

Thanks in advance for your participation. Please pass this notice along to anyone who may be interested.

I believe the Eico 753 was the FIRST Amateur transceiver that could be used for FM on the amateur bands. Even better, the operator never knew it. ~~

4891. FOR SALE: COLLINS 500 Hz MECHANICAL FILTER

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-09 00:00:00 UTC
From: wb9gkz@aol.com
Message-ID: <1998070911462600.HAA00194@ladder03.news.aol.com>
Source record: 102631

This is a 455 KHz mechanical filter, 500 cycle bandwidth as removed from
a 75S1 receiver. The filter is a "tubular" type with three pigtail solder-type
connections on each end. Numbers as found on Collins decal on filter:

F 455 Q 5.
8 S 2
P/N 526 9367 00

Filter worked well before pulled from radio. Can is shiny and Collins decal
is fully intact. This would be a nice addition to an S-Line radio that could
use it. Price: $125 shipped CONUS.

Pat Keogh

4895. FS/TRADE ARRL Publications (long)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-09 00:00:00 UTC
From: ekugrad@mindspring.com
Message-ID: <35a4cd4e.25324295@news.mindspring.com>
Source record: 102635
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono,rec.radio.swap,alt.books.technical

I have the following ARRL Publications for sale or trade. I would
prefer trading for Publications or QST's that I need. I also collect
QSL cards, Logbooks, Licenses, etc. from the pre-1960 time period.
Let me know what you have to trade.

Radio Amateurs Handbook 1942 Special Defense Edition. Complete in
Good condition. Cover has been retaped from the inside, and the spine
has a few splits. Price: $40

Radio Amateurs Handbook 1943 20th Edition. Fair condition. Cover
has been retaped from the inside, and has a few tears at bottom. Well
read, but complete and inside pages are fine. Price: $20

Radio Amateur's Handbook 1957 34th Edition. Good condition. Spine
torn at top and bottom. Cover faded. Inside is very good. Lots of
Ads in the back. Price: $20

Radio Amateur's Handbook 1961 38th Edition. Fair condition. Bottom
of front cover is torn A(about 1/2") and same bottom corner is torn
from the first 15 pages. None of the print is damaged except for the
page numbers. Cover is pulling away from the spine, but
all inside pages are in good shape. Price: $15

ARRL Antenna Book. 1946 4th edition. Good condition. Rub mark on
top front cover. Pages yellowed (printed on newsprint type stock).
Price: $15

ARRL Antenna Book 1956 8th edition Good condition. Well read, but in
nice shape. I have two of these in same condition. Price: $10ea

Single Sideband for the Radio Amateur 1958 2nd edition. Good
condition. Small tear on top of front and back covers. Price: $10

Single Sideband for the Radio Amateur 1965 4th edition. Good
condition. Spine has a few tears in it. Cover has a tear over the
price, where a price sticker was removed.
Price: $7

Understanding Amateur Radio 1963 1st edition. Good condition. Well
read, but complete. I have two of these. Price: $7ea

Buyer to pay shipping on all items. Usualy USPS is cheapest way, but
will ship however you wish.

David
W4IDX (ex KA4IKH)

ekugrad@mindspring.com

I will trade any of the above items for any of the following items I need:

4896. What constitutes a Boat Anchor?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-09 00:00:00 UTC
From: rbethman@my-dejanews.com
Message-ID: <6o2s4rhqu1@nnrp1.dejanews.com>
Source record: 102636

I sent a reply to a query as to how to connect a D-104 Silver Eagle to a Siltronix 1011C. Let's see, over 20 years old, tube type, power supply internal, heavy thing.

I have gotten shot at TWICE over this post. The first one apologized when he realized the Silver Eagle was a microphone. The second one hasn't bothered, yet seems to work at moderating/policing the NGs.

The first question was whether I sold mine to a ham. Yes, I did, but quite frankly that is not a requirement by any rules or regulations.

Then the radio was referred to as a "pseudo" ham rig. It didn't come able to talk on 11mtrs. Someone had to hack the radio to get it to do so.

I have owned about three of these, and have used them for 10mtr phone exclusively. I could care less about the 11mtr position on the bandswitch.

So what gives? Is this the appropriate place to discuss making one work or not? Is it a boat anchor? If it isn't, then the Swan 250, 500, 750 rigs don't either. They are all based on the same chassis.

Bob
Actually the first design was a Swan 1011 then Siltronix bought it out
and put the new designation on. It definitely is a BA. All tubes as I
recall
This is the right place. Some readers enjoy lurking in the shadows with
non names and enjoy being a pest.

His "points" may have some validity, but I don't think it's "appropriate" to publicly "berate" or "flame" a seller for any of the reasons mentioned. "Cheaper" is always available, ...and we usually get what we pay for (remember the Yugo?).

In this specific case, my point was that I sure don't mind paying an extra dollar or two for truly outstanding service. The service I received from Joe was worth more to me than the (small) price I paid him for the tubes!

I certainly do remember the Yugo....but that's not what we are talking about here. And I, too, would rather pay a premium for quality service than take a discount for lesser service. However, my point is I have found and purchased, in some numbers by the way the very same tubes, for as much as $20/each less. Which was the original point of the "offending" post.

This is not a case of paying for and receiving a Mercedes vs paying for and receiving a Yugo. This is a case of buying a Mercedes at Rolls Royce prices, when the same Mercedes is clearly available at a Mercedes price.

This is a significant distinction, and it was the point, though harshly made, by the author in question.

I'm relocating to the West Coast from NY. Have to get rid of ton's (literally)
of gear. Call me at 914 477 3018 or 914 477 0989 for details.

Tom K2TA

Some available items:
Zenith Transoceanic, dozens of Zenith table radios, 3 Zenith consoles.
Fada Projection TV 1940-50's
3 Atwater Kents (one is breadboard)
Heath Warrior, Apache, Mohawk KW amp, TX and RX
2 or 3 Hallicrafters receivers/speakers (general coverage)
Johnson Valliant
Heathkit HW-16 with HG-10 VFO
Heath DX-60 TX / HR-10 RX / HG-10 VFO
National NC-300 with matching speaker, 6m and 2m converters
National NCX-1000 KW transciever engineering sample ser #008
Harvey Wells Bandmaster TBS-50
Hallicrafters HT-40 Transmitter
Realistic General coverage receivers
Heath GR-64
Heath GR-91
Drake R4-B with WARC xtals and general coverage
Ten-Tec OMNI-V with remote VFO on Brown brother paddle with keyer.
Yaeseu FT series 2 meter transverter console
Kenwood AT-250 antenna tuner
Gonset GSB101 and GSB201 kw amps (4x572B and 4x811A's)
Gonset 2m transciever
Polycomm 2m and 6/2 meter transceivers with original box.
Large tube testers from pharmacy. small tube testers.
Thousands of tubes including small CRT's etc.
2 AEA PK-232 Packet TU's
A3S 3 element tri-band beam with 40 meter conversion kit
Diamond X-500 2meter/440 vertical with "N" connection
Heath SB620 Scannalyzer scope (panadaptor)
RME-45 receiver with matching VHF-144 tunable converter
Lots of test gear (B&K picture tube rejuvinator, B&K analysts)
Heath six'ers and two'ers (many)
Kenwood TS-520

More as I stumble across it..

Gary
As far as I know no one is doing it now.
But, I have a thought. I worked on a SX71 that had a terrible repaint
job and the letters were poorly masked. I removed the old air dried
paint with MEK solvent and it didn't effect the baked on enamel that
Hammarlund used.
The only problem after removal was some rust spots on the sides only
and matched it very well with Krylon.
Not sure how the paint on the 180 would respond- but GOLD!! YEEKK might
be worth
a try.

>on almost everything advertised in the NG ...

True. I was given a Galaxy GT-550 *free*. For the price cops, this would mean that *any* 550 that's advertised on the NGs for more than $0 would be overpriced. They seem to believe that the lowest price that occures anywhere should be the price for all future transactions.

Thank you George, it is good to see that the free market can survive without some D.H. telling someone else what's right... I think my prices reflect the service that I can provide to my customers, which I have NEVER heard a complaint from.
It is unbelievable in this day and PROSPEROUS age that people would take time out of their life to mind what someone else is doing... I wil continue to sell ALL my wares as I SEE IT, those who know me will always see through this bullshit and get on to the real thing, the hobby of tubes.
Thank you and all others who have supported me amongst this mindless bullshit...
VERY sincerely,
Joseph Pratt<< look, real name, no initials or ANONYMOUS REMAILER....

>tubes sold at the asking prices, then the buyer must have thought the
>price was fair.....(edit)

>But I am willing to bet that somebody bought something at listed
>prices as a result of those posts. Just market forces at work...

There is a distinction to be drawn between a fair price, and what the market will bear. The two are often unrelated.

And, that someone bought a commodity at a price listed is pretty much a certainty. " You can tell when times are good, people will blow their money on anything."

That the commodity is worth what the price someone is willing to pay for it, is a definition of the free market. And, it is, in fact, how it should be. However, that someone chooses to rebut these prices is also a definition of the free market and also how it should be. And just as you have and exercise the right to ask for a deal, as in fact to I myself, and many others, the ortiginal posted response to the listed prices of these tubes, as harsh as it was, is a fair right in the free market system and fundamentally no different than any of us asking for or negotiating a deal. The term "Price Police" has no place here. The author offered an opinion, blunt as it was, which is his right, when he believes the asking price to be inconsistent with value.

If there is anyone here who collects vintage televisions
or knows someone who does, please pass this message along.

I'm working an estate near Austin, Texas.
There are a couple of dozen vintage televisions,
which look late 40s to mid 60s. Most are
Zenith or Admiral. I am not a TV expert so
cannot tell a valuable model from a clunker.
You sure can't beat this price: I will give them away free
to whomever will come and get them. You must
provide your own labor and transport.

Contact Dave Stinson,
arc5@ix.netcom.com
for details.

If you're satisfied, that's all that matters (and you saved $20 apiece).

> This is not a case of paying for and receiving a Mercedes vs paying for and
> receiving a Yugo. This is a case of buying a Mercedes at Rolls Royce prices,
> when the same Mercedes is clearly available at a Mercedes price.

The same Mercedes sells for different prices at different dealers.
We have a "free marketplace", just as we have "freedom of choice".
Both are, in my opinion, fabulous freedoms we're privileged to enjoy.
It matters not whether we're talking about Mercedes, or "boatanchors",
or Internet ISP's...or anything else. Even tubes!

This is the B&K DYNA-JET model 606 tube tester. It is a compact unit that tests for Cathode emission under current load and tests for Grid emission/leakage.

The tester comes with original instruction book and two set-up charts. The instruction book is copyright 1965. The tester's case is blue and the panel is silver and blue. It is a more "modern" tester that will not accomodate the old 4-pin tube bases but it will test Nuvistors, sweep tubes and even the 6146 (and of course, all the popular 7/9 pin mini's and octals).

The tester is in very good condition and has no major physical scars.

PRICE: $65 shipped UPS to your door.

>It matters not whether we're talking about Mercedes, or "boatanchors",
>or Internet ISP's...or anything else. Even tubes!
>
>

You missed the point of the original author's post. Yes, we do have a free marketplace, and freedom of choice. And those freedoms include the free address of some of the absurd prices in that marketplace. If you choose to go with a higher price, that is, of course, your free choice. However, there is no virtue in paying three times the price for the same tubes, (same brand, same manufacturer, NOS, in the original box) just as there is no virtue in paying three times the price for the same Mercedes, the same boatanchor, or Internet ISP as is available elsewhere. And the intense pricepoint advertising in this country, in virtually all areas of commerce, including auto sales, radio sales, radio tube sales, and Internet ISP connections attests to that.

What the original author did was no different than any ADVERTISER in this country has done since the creation of pricepoint advertising. It is, in fact, a well established part of the free market system, to disseminate information that would reduce price gouging. And what the original author said, and said rather harshly, was that the prices quoted were outrageously high, ...without clear reason, in light of the otherwise going rate on the very same commodity. Customer service notwithstanding, there is little to justify a price 3 times the going rate, except the merchant's legal empowerment to do so.

So, before railing against the Price Police in future, consider how often one has paid 3 times the going price for one's car, Internet ISP or any other commodity. That, or start firing flaming mail to Burger King about being self appointed Price Police in the burger wars.
Or spray paint "Price Police" on the windows of your nearby high volume car dealer...

Hello Harry,
interesting story and not so different from my own start into transmitting.
>When I was 15 years old I built my first transmitter. 1220 KHz AM and
>modulated it from the anode of the record player tube. My brother and I
>went over the fields listening to the signal on my dad's Fergusson
>"tranny" wireless set. Suddenly the modulation stopped so we hurried
>home more than five miles, thinking that something had blown up. It was
>a bit of a bodge, but it worked.
At age nine living on the I.O.W., my brother inlaw who at that time worked for the GPO as a telephone engineer introduced me to a germanium diode across the two terminals of a telephone earpiece and after connecting a lengh of wire to one of the terminals, there was R.Caroline!
She was broadvcasting off Frinton at the time and infinately stronger than any other station on the island.
I met Simon Dee, who lived up the road.
At age 16 I built my first self excited 807 with screen mod, tested on both medium wave and 49m shortwave, had reports from all over the place, including Eric Gotts and Vic Frisbee!(RIS)
Hung out with various London medium wave stations in my teens, Odyssey, Concorde, Kaliedascope etc, including the Kaliedascope christmas broadcast with a pair of high level modulated 813's and phone calls from as far away as Austria and Nova Scotia.
Also went through the 19 set syndrom on 45m but ended up building a homebrew AM set with much better mod and power.
At age 18 while chatting to whoever would talk to me on 160m as a pirate, my mentor Fred Barnes, G3AGP suggested I get myself down to his RAE course in Hackney or was it Dalston? Twelve months later in around 78 I passed the exam.
I agree with you on all the illegal pre-legal CB activity, I was one such person even though for a couple of those years I already had my ticket but had made so many friends on 11m - I'm not a hypocrit just because I've had a ticket for 20 years. I know where my radio roots came from.
With all the antaganism shown towards 11m op's over the couple of years on the net I just remember all the friends I made back in the early days, not just here but especially the US, whom I later met and stayed with in their homes and who I'm still in contact with. Their hospitality shown was second to none.
>There had been a "visitation" and the parties concerned demanded to look
>around as my dad denied having a wireless transmitter in the house. He
>knew we had done something so he pulled out the plug from the record

>player. The 20 watt carrier was generated by an 807 bottle which was
>laying on it's side on the table amid a pile of stripped radio
>components etc. The "visitors" must have been looking for a big black
>box with TRANSMITTER written on the front, or something, because they
>couldn't see it. It was right in front of their noses.
Why did everyone think the ceramic based 807's were superior to the
bakelite ones?
>I don't mind you or anyone else knowing all about this because I think
>it is fun to look back on these incidents. It may have been a bit
>worrying during all three incidents but I think I can look back and
>laugh. It happened, no-one can do anything about it now, and luckily, I
>was never actually convicted of anything. Yep those were the days.
>Anyway, I loose my internet connection the day after tomorrow so instead
>of writing this I will go and see if I can hook a few more simpletons
>with sweeping statements. I have already managed a few this week.
>
>Best regards, Harry (SM0VPO / G4VVJ / G8TGL / EL84)
Here's one for you Harry.
If you've ever driven along the A1 between Borehamwood and Hatfield and
passed the four AM broadcast towers at Saffren Green I can tell you that
while the field was still ploughed up after having the radials layed,
the towers had a static clamp on the bottom and the transmitters were
still waiting to be installed someone on his moped hooked up his 10w
medium wave transmitter to one of those 1/4 wave verticals late one
night.
His friend was waiting in a telephone box outside East Finchley tube
station and shortly after a one hour taped show was broadcast a call was
received from Gosport in Hant's.
I still have the delivery tag off the tower:-)
Oh for nostalgia.
Well, I was 16 at the time, what do you expect, got to try the damn
thing out on the air have'nt I?

Phil G4ZOW
How did the fellas at the Sheffield University put out such a strong
signal on their annual rag week medium wave broadcasts in the 70's?

Right On, George.
(Even if a bit course ;-)

These clowns would never get their lazy butts
out in the dirt and heat of an old building to
find, buy, transport, clean, box, store, advertise
and ship this stuff. Which would otherwise end up
in the dump, by the way.

They're quick to condemn the very people who
spend their labor, time and money to make the
hobby possible. Give them the scorn they deserve.

Mike,

There is an old story (ham urban legend?) which suggests that when Swan
brought out the Swan 1011, the ARRL was considering banning Swan from
advertising in QST because the thought ws that this was a an illegal high

powered CB radio in disguise and the ARRL was getting a lot of flack from the membership about Swan producing and marketing it.

The rest of the story seems to be that Swan then created a subsideriary company called Siltronix which was not directly associated with the Swan name so that they could continue to advertise their ham products in QST. I am sure that there is a further "rest of the story" to this legend and I would be happy to hear it :)

The owner of the tempe.gov boatanchors e-list came up with a definition that everyone seemed to agree with: It must be at least 30 years old, designed for amateur or military service, and contain at least four tubes.

I think we could safely add commercial and government service to the above; that would then include the shipboard, coastal, aero, and broadcast gear, too, rather than just limiting discussion to amateur and military rigs.

What do you think, Charles, aka somebody@somewhere.com?

Fairly priced, working right and as I say or your money refunded (after a small amount of whining of course!)
#1. Kenwood TL922A...9 looking 10 working $950 and you pay shipping, Ill do it RIGHT! (that of course means it wont come UPS)
#2. Ten Tec Titan....the newest model, very clean,super smooth!! $1795 plus shipping."THE KING"
#3. Drake L4B in near collector shape (fresh paint would do it tho it looks 9+ now) Full output , perfect working order. Everything is right about it! $795 + shpping.
#4. Ameritron AL 80 A, very clean full out from nearly new Graphite tube. A pleasure to use and wont break the back or the bank! $625. + shipping and you will love it.
#5. I also have the wonderful "Worthmore" mobileamps in stock at $329.+10 bux shipping

Email for further info if you need it. Will trade for other HF amps and gear. Would like to try an Icom 775 DSP. Could put some GREEN with the Ten Tec or any of em. Thanks Murray K5MDM

Actually the "Classic" method of slowing down a
Vibroplex was to place the weight as far out as
possible next to the dampening weight, and then
wrap a "gob" of solder around the weight :-)

Works great, I got mine down to 16 wpm
(hope I'm not dating myself too badly!)

Trish

From: hsynovetz@uasc.com
Message-ID: <6o3mas$2vb$1@nnrp1.dejanews.com>
Source record: 102660

After many moons of casual searching I managed to find a nice example of a Gibson Girl. As expected, DOA. Can anyone point me to a web site or source for a schematic, or know the correct TM number for this little rig? Any tips would be appreciated.

OBTW, are there any regulatory/licensing implications of "cranking" it up, or is the power level below any legal limit? Thanks.

Hello out there,

Does anyone have info on who does silk screen (re-painting
of letters etc.) for the front panel of a HQ-180.
This radio has so much potential but it was painted gold by some
previous owner (by the way it looks horrible).
If I can have it done or if I can buy one, please email me and let me
know.

Thanks and 73's

Gary bierbier@bellsouth.net

Greetings, folks,

I have a Hickok 539A tube tester for auction on Ebay. The tester works well, looks nice and offers some key advantages over some garden variety Gm tube testers. The direct URL is [http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=19927547]. Please copy everything in the brackets into your web browser to get to the item. Otherwise, it is item number 19927547. Bid ends 07/10/98 at about 9 PM PDT.

Thanks for you bids! Please email me with any questions you may have.

4966. FS or T: Sencore LC-75 Capacitor and Inductor analyzer "Z Meter 2"

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-10 00:00:00 UTC
From: watsons@aol.com
Message-ID: <1998071000410900.UAA28687@ladder03.news.aol.com>
Source record: 102663

For sale or trade: Sencore LC-75 Capacitor and Inductor Analyzer with SCR250 triac and scr test adapter.

This may not be a boatanchor but would certainly be useful for working on them.

The LC-75 is a very high quality device used to measure value, ESR and leakage on caps (at rated voltage for electrolytics- up to 600VDC) and for value and to "ring" chokes and flybacks.

The SCR250 is an adapter used with the LC-75 to test SCRs anf triacs.

I have manuals for both units.

I would like to trade this for one of these world band portables in order of preferance. Sony SW-77, Sony 2010, Grundig Sat 700 or 500.

I also have an Icom R1 and a Toshiba T2000SX 386SX laptop to barter also.

E-mail if interested

Scott
watsons@aol.com

Have about 40 used 6 and 7AH 12 VDC gel cells for sale. Also have
about 10 4AH 12 VDC cells. All load tested good. PERFECT for QRP rigs
and portable operation. I have sold hundreds of these to the QRP boy's
on the QRP mailing list and all have been very satisfied. Had a few
damaged in shipping and one came back DOA which I replaced for the
fellow free of charge but that's it. I am the service manager for an
alarm company and we change our customers batteries every 3 years as
preventive maintenance. These used cells should provide another 2 to 3
and probably longer service if used and recharged properly. Cells come
fully charged and are ready to go. They can be recharged with a simple
wall wart charger available at Radio Shack or a 1 amp automotive
charger. I guarantee against DOA.
Brands are Yuasa, Interstate, Radionics and Portalac.

4 ah cells are $8 shipped CONUS
6ah cells are $10 shipped CONUS
7ah cells are $12 shipped CONUS

If you buy 2 of the same I will knock $3.00 off the total price.
Images of the cells can be seen at:

http://www.usol.com/~tje/yuasa6.jpg Yuasa 6ah
http://www.usol.com/~tje/yuasa7.jpg Yuasa 7ah
http://www.usol.com/~tje/rad6.jpg Radionics 6ah

Yep! And guess what? It meets YOUR description of boatanchor
that you post twice a month. It is a tube based rig - It also does
very nicely on 10mtrs.

I bet that just tears you up too. Now go take your Prozac and
be a nice "little" person. <grin>

>I'm looking for a Hammarlund SP600 Steel Case

There are many of us who'd like one; some considerations:

- the originally-furnished boxes often fetch what the whole rcvr is worth<aarrgghh>;
- the SP-600 requires a deeper-than-normal box (or other enclosed rack) to accomodate its chassis;
- there is a relatively common Bud box that it will fit into; it resembles the original, but has those fugly (IMHO) chrome & red trim strips top & bottom of the panel opening.

Message-ID: <1998071109172701.FAA13489@ladder03.news.aol.com>
Source record: 102528

>Hello all, our commodities expert PETER MAUS can get you new in box AMPEREX
>(hope they are bugles)(hope they are Holland made) 12AX7
>for 9.00 each. I don't remember his Email address , but you can find it under
>"PRICE POLICE" . I'm sure Mr. Maus will share his 9.00 stash with all of us,
>ther MUST be plenty to go around.
> Thank you,

Looking at my last invoice, Let me make a correction. My last purchase order included:

7 Amperex 12AU7's, Holland made, bugles,

$8.50 each.

and three of the obviously highly vaunted 12AX7's at $9.50.

This is my most recent purchase of this tube. There have been four others in the last year and a half. (I use them in my Collins, winged emblem, mixing console.)
Now, the point, here, Joe, is that, while you certainly have the right to sell your 12AU7s for $29.00 each, there are numbers available of the same tube, for much less. And the author of the original post commenting on your price list, said so, quite correctly, at the beginning of this thread.

Congratulations on selling out your inventory at your price. Congratulations, also, on maintaining a satisfied customer base at that price. Finding a vendor who provides a quality service these days, is a satisfying accomplishment for a customer.

However, as was stated by at least two others at the beginning of this thread, I have to agree that, service notwithstanding, your prices are more than a bit high. Clearly, they are what the market will bear, but not nearly the going rate. This, and nothing else, was the point of the original author's post. Why you have taken this matter so personally, is a question of some curiosity.

Thanks for making me a star, Joe. I'm sure I'll get the chance to return the favor some day.

By, the way, would you know the free market price on a set of Amperex 12AU7's, bugles, Holland made, with less than 100 hours on them? I might have a set to sell. Please respond by e-mail. That is, unless you wish to continue this in a public arena.

I have absolutely no desire to keep responding to yourself or any others who take it apon themselves to make life miserable for others. YOU CAUSED ME ALOT OF TROUBLE that I did not ask for or did not deserve, at least in my minds eye. Whatever motivates people like yourself I'll never know.THAT IS THE LAST OF IT. let others enjoy this bandwidth without having to look at this bullshit ANOTHER day. If you have a personal vendetta against me, you can get on a plane and come to NEW JERSEY and we'll discuss it in person. I've dealt with alot of people in my 38 years, but never had a problem with ANYONE like yourself. THAT IS THE END OF IT> I will not respond to any furthur attacks from you or your minions,I will continue to provide fast, topnotch service to my HUNDREDS OF SATISFIED customers
undaunted by a cheap shot taker like yourself.
I pity you.
VERY sicerely, JOSEPH PRATT,

Message-ID: <6o7omv$dbe@nntp1.erinet.com>
Source record: 102534

For sale: National NC-183D in exc. condition with original manual. Works on all bands and alignment is super. The only problem is that the RF gain has to be reduced slightly to avoid distortion. The audio is great at that point. It may be the AVC tube which I don't have. $225 local pickup in the Dayton, Ohio area. This radio is all original and real nice condition. Just don't have room for it.
Please email direct if you are interested. May consider a smaller good quality SW receiver or a laptop computer.
Thanks
Tim

Message-ID: <35A78051.1F94@roanoke.infi.net>
Source record: 102536

Yaesu FTDX-400 TUBE transceiver from around 1970. 560 watts PEP SSB/500 watts CW/125 watts AM. 80-10 meters plus someone has added 27 mhz crystal. Built in AC supply.

Receive well on all bands. Unit has output but probably needs an alignment and neutralization. Front panel is good and all knobs are original. Cabinet isn't bad either. The bottom metal piece that surrounds the front panel has a small ding in the lower right corner which isn't very noticable. Have copy of the manual. $175 plus UPS charges from 24018.

I don't know Joe nor do I know Peter, but I do sell tubes from time to time. $8.50 for real Amperex 12XX7 tubes is a remarkable price!

I must point out that if those were purchased 12-18 months ago I doubt very strongly that you could buy for that price today (if someone knows of where to get them let us in on it!). Also, I don't know if Joe's price is good, bad, or what, but I do know that some highly respected tube vendors get that much or more for Euro high quality 12XX7 tubes. Prices on the "audio" types have gone way up with the resurgent interest in tube gear.

I just think the marketplace will do an effective job of regulating prices. I also know that there are a zillion fake "Amperex" tubes out there, so be careful about $9.00 "Amperexes" , as that seems quite low for the current state of supply and demand.

My .02 worth.

That being the case, MOST of what folks post on here does NOT
qualify. 30 years old means made NO LATER THAN 1968.

BTW the 1011 series are definitely loaded with mor than 4 tubes.
It has somewhere around 10 - 12. It definitely was commercially made.

Bob

Keep in mind that it was not ME that not only listed, but offered comment on your prices orginally. It was, however ME who defended the original author and his right to say what he said.

I have taken no cheap shots, pal...nor do I have any personal agenda here. In fact, if you'll re read, I did defend your right to both charge and serve as you see fit. But I did take exception to your flame of the original author.

It seems to me that the term "boatanchor" cannot have an absolute definition. For every definition one can come up with , others can come up with exceptions. I can come up with many examples of rigs that I consider boatanchors that do not fit the below stated criteria. I noticed that consumer electronics was not included in the below stated criteria. But what about the millions of Admirals, Philcos, Zeniths, etc. that have been manufactured for the family since the beginning of radio? Personally, I consider these boatanchors also. So, to paraphrase an old saying..."boatanchors are in the eye of the beholder" :)

My 2 cents worth,
Peace,
DUCK

I have a Valiant II I just received and am having trouble getting it to operate on 40M up. On 160-80 it loads just fine.
It is on my bench and is connected to a Cantenna 50ohm dummy load. In the manual, it says to adjust the clamper to 10ma. static plate current. Is that 10ma. static plate current to be read on the upper meter scale (0-500) which is for plate current? If so, setting it to 10ma. just barely moves the needle up from zero.
The manual then says to set the Oscillator control to Zero. After performing the above adjustment, and following all instructions in the manual preparatory to that point with appropriate readings obtained, I get less than 1ma. (if that much) grid current when trying to tune the Exciter dial for maximum current. When the Driver control is increased to maximum drive, I still get no more than 1ma.(it's supposed to increase it to 8ma.). When then loading the transmitter, the plate current is just about 250ma. on CW when it is supposed to go over 300ma.
Anyone have any ideas? I'm not that familiar with the older equipment. Thanks.
Terry (KA5IHV)

Duck,

I cannot help but agree with you. My main beef may be more with his "The owner of the tempe.gov boatanchors e-list" reference. I looked again and only see "rec.radio.amateur.boatanchors". So what has this other group to do with this one? Interesting.

How about it Jeff? You haven't responded to my message I sent regarding that is WAS sold to a ham even though it is NOT any form of a requirement. Tsk, tsk, tsk.

Bob

I need tor replace the rcvr front end on my FT101E. I remember a few years ago someone telling me there was an FET that could be placed in the front end that would improve the performance. Since I neew to replace it I would like to put one in there that would improve it. I can find no cross reference for the 3SK40M that is in it now.
Anybody know what a good replacement would be?

I have for sale Navy SRR-12 receiver.
This receiver coveres 250 kc- 8.0 mc. The receiver is in very good cond on the outside and looks like new on the inside. It works well on all bands and comes with a manual (copy).
I am asking $300.00 for the receiver.

Gee - note your OWN posting:

rec.radio.amateur.boatanchors (tube-type communications equipment)

Look familiar? You post it twice a month.

> Hi Bob,
> I hope you sold your 1011 to another ham, for I'd hate to believe that
> you, as a licensed amateur, would sell gear knowing that it was going
> to be used in an unlawful manner. The 1011 is one of those "make believe"
> amateur rigs; the model number, 1011, of course means 10m 11m.
>
> It's not really a "boatanchors" so it's out of place on r.r.a.b.
>
> 73,
> Jeff KH2PZ

I personally resent the thinly veiled insinuation of possibly selling a rig
to someone that was or was not a ham. The presence of 11mtrs on a
bandswitch DOES NOT make it a lesser radio. It is no wonder that
hams get a bum rap. Look at your attitude - really look
at it closely.

> The subject line contains a question; I provided one particular
> answer. Feel free to add or subtract from it as you please;
> discuss it; kick it around - that's the purpose of discussion groups.
> Just don't kick the messenger because you don't care for the message's
> content.

You did not provide an answer per se. NOT with your crack as to whomit may
have sold to. Then you plainly state it is NOT a boatanchor when
YOUR twice a month post says tube based gear as a definition.

> >How about it Jeff? You haven't responded to my message I sent
> >regarding that is WAS sold to a ham even though it is NOT any
> >form of a requirement. Tsk, tsk, tsk.

>
> Good for you, Bob! I'm proud your conscience dictated that proper

I think you'll find my conscience is in better shape than yours

> You'll note that an ad for a 1011 just appeared from "Chuck's CB Sales,"
> x-posted to both .BA and .CB...

Yep. His question had to do with connecting a mic to a 1011C. So nowhe
sells a 1011D and it apparently is a major crime?

How about if he sells a FT-101 series Yeasu? They ALL had an 11mtr
position on their bandswitches.

The ability to oversimplify to a ridiculous extreme never ceases to amaze me. What has been said here, has been that the prices offered that were in question were up to 3 times the going rate on the same brand, same tube, same condition..even the same box color. That the listed prices were out of line for both the commoditiy and the market. That the right to comment on this matter is part of the free market system, just as is pricing commensurate with both profit margin and overhead expense. The gist of the outrage, as this has developed, is less that the prices listed, (ex...Amperex 12AX7 for $29.00 NIB, against common price of $9.00 at which I routinely buy them, that is to say, also Amperex 12AX7, NIB) and more that someone had the gall to say anything about it. The orignal author who expressed quite clearly that the listed prices were, in most instances, out of line, in no way suggested that the lowest price is the going price.....but rather that the prices, 3 times and more what is commonly available, as listed were absurdly high. He is right. He did not suggest anything more than that....and, if I recall, offered it as his opinion.
However, if your need to be conclusive is such that you MUST draw the above absurd conclusion, by all means, please do so. THAT TOO, is part of the free market system.

Just be advised, that calling a price, no matter what the reasons, a good deal, does not make it so. Nor does it impart a virtue in overpaying for a select commodity that is the same in select type, condition, even brand, commonly available for less.

5031. FS: Westrex 9B2

Newsgroup: rec.radio.amateur.boatanchors

Message-ID: <35A6F6F7.7C89@sunlink.net>
Source record: 102614

I have an extra Westrex 9B2... one is more than enough.

This unit is AM/SSB/CW, and has switch positions for fax/rtty. The Westrex was manufactured by Litton, and is crystal oven controlled. I assume it is a commercial unit, but I am really not sure.... now for the dirt...

It took me a year to restore mine, due to my desire to hunt for parts. It will need crystal oven units, which are fairly easy to locate at a fest. It will also require three 6146a tubes for the final. The unit is not in beautiful shape, but it is acceptable, with a few scratches. These rigs were used in a MARS station, and I purchased them for 125 bucks each.

I am willing to sell for 100 dollars (US), plus shipping. If you are in the Bloomsburg area, I would suggest you pick it up. It is the size of one of the large microwave ovens from the 70's, and weighs at least 85 pounds.

sooooo.... any takers??????

Paul, N3PEE

5032. 2 mags Shortwave Craft and Radio Craft

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-11 00:00:00 UTC
From: smokedtofu@aol.com
Message-ID: <1998071103280100.XAA15230@ladder03.news.aol.com>
Source record: 102615

I have a July 1937 issue of Radio-Craft and a September 1932 issue of Shortwave Craft that I would like to offer to someone in this newsgroup. I dont know how much they would be worth nor am I willing to ask a lot for them either. I will accept the highest reasonable offer. I would like to sell both of these together if possible. Both magazines are in good condition (for being this old) with all pages and in a plastic pouch .Oh, I will give these free and pay the postage to anyone that knows where I can positively purchase a good cabinet for a 1937 Zenith 5S-228 tombstone. I have the electronics in good working order but desperately need a cabinet with knobs. (Must verify availability of cabinet before I ship mags)

1937 Radio-Craft includes Radio Data service sheets for a :
Stromberg-Carlson No 127 AC/DC
GE Model E-51 Receiver
Crosley Model C-516 (Chassis No 506)
Chrysler-Philco"Custom-built" 1937 Car-Radio Set
Includes other schematics and ads for other radios also. Lots of good stuff.

1932 Shortwave Craft includes articles on:
Hammarlund Comet Pro
Denton 2 tube receiver
Schematics for SuperHets
Includes other articles on repair and receivers as well.

Both magazines have ads also. Lots of good reference material.

Thanks,

Monty

Message-ID: <35A6EA75.7A82@erols.com>
Source record: 102619

Vibroplex WWII Deluxe Lightning bug, serial number 126927,
ca. 1944. Grey base - chrome parts - red finger pieces.
During the war years the bases of Vibroplex's deluxe bugs
were "battleship" grey instead of chrome. This key is in
good to very good condition. The chrome plating of the upper
parts in rather thin as compared with bugs made today but it
looks very good for a 54 year old key. All parts are original
and the jeweled bearings are not broken. While not rare, these
WWII Deluxe versions of the Lightning bug are getting harder
to find. This is a very nice bug for the key collector or
boatanchor enthusiast to go with that 40's rig. This is a
clean, fully functional and sweet sending key. It's speed range
(dit speed) is about 23 to 40 WPM. Put a clothes pin or other weight
on the pendulum and it will hit novice speeds.

A jpg image can be supplied upon request. The first $150 plus $8
postage and insurance gets it. If you are outside the continental
USA shipping costs will be considerable higher.

73,
Puck

5038. "Sinking Boatanchors" - Time Out

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-11 00:00:00 UTC
From: wetartie@ix.netcom.com
Message-ID: <N.071198.013203.91@vna-va12-54.ix.netcom.com>
Source record: 102621

Every so often, various newsgroups seem to take a real dive,
sinking to lower and lower depths. "Boatanchors" is obviously
no exception...as the messaging seen here the past few days
exemplifies. We've got the "nobodys" accusing "somebodys"
of being "busybodys"...someone's selling cheap tubes,
someone's selling tubes cheap, someone's tubes are stuck
where the sun don't shine, and someone wants to stick'em
there and turn the plate voltage up real high...
somebody's (or is it nobody's) tubes are in boxes with
taped end-flaps, nobody's (or is it somebody's) end-flaps
are hangin' loose in the breeze, we've got 4-letter words
flyin' faster than electrons in $9 12AX7's...
we've got the price police doin' their thing,
the anal-retentives holdin' on to their things...
yadda, yadda, yadda...(forgot if those words of wisdom
were spoken by Philo Farnsworth, Fred Flintstone, or
Hiram Percy Maxim)...

Time Out! TIME OUT!
Hey guys...can we all call a "truce" here?

Boatanchors.
There, we're back on topic.
Let's see how long we can stay there.

BTW, anybody got a transmitter lyin' around older
than the Lysco seen advertised here yesterday?

I will have a great story on the Motrac here in a few days so hopefully
this NG will still be online.

5040. 4-1000 TUBE/ AMP PARTS FOR TRADE

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-12 00:00:00 UTC
From: "David L. Stinson" <arc5@ix.netcom.com>
Message-ID: <35A8F3BD.28F8@ix.netcom.com>
Source record: 102424
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.misc

I have a NOS / Boxed Eimac 4-1000 tube,
a matching Eimac SK-500 socket,
a heat dissipating plate connector,
Jenson Vacuum variable,
large air variable caps,
heavy-duty band switch,
large 3 KW+ roller coil
and other parts for
a BIG GUN amp.

Will trade for good-condition
rare "ARC-5" type Command sets, like:
ARC-5 T-15 transmitter, covering 500-1300 KC.
ARC-5 T-89 transmitter, coving 100-125 MC.
ARC-5 T-90 transmitter, covering 125-150 MC.
ARC-5 R-113 receiver covering 125-150 MC.
8th-Air Force modified BC-455 (20-48 MC).
RAT and RAV receivers and accessories.
Others considered.

Extent of trade depends on rarity and condition.
I already own multiples of more "common" sets
and have no interest in large lots of them.

The amp parts are absolutely not for sale
and offers to buy for cash will be
deleted without response.

I am not interested in trading for anything
other then that listed above. Offers
of other trades will be deleted without
response.

> Atlanta

Dave,

I also have one from 1969 which is the M+2/U. the wiring in mine is as follows:

Red - To PTT switch circuit
Black - Ground
White - Audio line
Shield on the White line - (ground)

I don't know about the original +2 but the U model had a built in audio speech compressor which works to raise the average talk power level. As a further note, Radio Shack still sells the 7.5 volt battery for it (Duracell MN175)

Good Luck

George

Interesting. I collect both vintage communications and vintage consumer receivers--such as Philco, Zenith, AKs, etc. The RecAntiqueRadio&Phono newsgroup would seem to be the proper place to deal in the "consumer" orientated items, except for the fact ads are frowned upon by certain members of the newsgroup. Even more interesting, some of my early Philcos sport better dial markings and resolution than my Hallicrafters and Hammurlands.

Source record: 102438

Hi Gang,

I'm looking for manuals on a couple of rigs I picked
up at the Salisbury NC HamFest yesterday. If you
have spares of these, or will make copies I would
appreciate it.

1. Clegg 22'er FM

2. Hammerlund fm60a, made by Outercom Electronics

There were several nice other BA's there, I saw a 75A4
that was priced at a little over $600, a nice National 2-40D,
a HW-16, and several old keys.

This was a small fest that got a slow start, I got there around 7am
and it really didn't get going till about or so.
I still think small HamFests with outside fleamarkets are the best
for finding the "Good" junk.

Thanks in advance for your help.

Message-ID: <6obin0$8ri$1@news3.mr.net>
Source record: 102440

I have a Yaesu 101EX station for sale. Sold only as a complete package and
will not seperate. Consists of the following:

101EX transiciver with the processer installed and hand mike,needs the
driver and final tubes
FV-101B external VFO, still has the plastic on front
YC-601B digital display
FTV-650B 6 meter transverter, still has the plastic on front
FTV-250 2 meter transverter, still has the plastic on front
YO-100 monitor scope, still has the plastic on front
Landliner phone patch
YS-60 SWR&Power meter

Have all the manuals for the radio equipment except for the phone patch.
Will let the whole works go for $800 with out the tubes or
$900 and i'll get the tubes and have it ready to go.

This is a Pickup only ,I will not ship this station setup. Iam in
Minnesota and can arrange a pickup place.

If interested .
Please e-mail me at
tlan0@runestone.net

Thanks
Terry

I'm glad you find it interesting, Bob. Consider the difficulty
we'd encounter if definitions changed from one forum to another.

The subject line contains a question; I provided one particular
answer. Feel free to add or subtract from it as you please;
discuss it; kick it around - that's the purpose of discussion groups.
Just don't kick the messenger because you don't care for the message's
content.

>How about it Jeff? You haven't responded to my message I sent
>regarding that is WAS sold to a ham even though it is NOT any
>form of a requirement. Tsk, tsk, tsk.

Good for you, Bob! I'm proud your conscience dictated that proper
course of action, even though it's not a requirement.

You'll note that an ad for a 1011 just appeared from "Chuck's CB Sales,"
x-posted to both .BA and .CB...

What do you think, Charles, alias somebody@somewhere.com?

Enjoy the weekend, Gang,

But you're missing the point Jeff.
There is *no* law prohibiting you from selling this stuff.
Unlike pornography, that has an age requirement, or guns that
require a background check on *both* the prospective buyer and
the item to be sold...

Now of course, you're liable to get yourself in trouble if you
make a living installing 1500 linears in pickup trucks for CB'ers.
Or if you sell a couple hundred 2 meter HAM handhelds to the
Greatful Dead roadies to use. (Telling them they can pick any
channel between 144 and 148 MHz and to just move if anyone gives
them crap.)

But all in all, there *aren't* any regulations (thank God) as to
what, and to who amateur (or for that matter, *ANY* electronic)
equipment can or can not sold.

Think of all those ARC-5 radios they would have had to grind up
for scrap since thier Avionics. Sorry, an Amateur License isn't
enough. What about all those Motorola VHF/UHF radios. Sorry, they
are for public service only, your license doesn't cover thier
manufactured specificied range.

Heh, about the only thing you *did* have to prove you were an
amateur for, was old Teletype(tm) gear. And perhaps sign a waiver
that you were in no way going to put it back into commercial service.
But then, that was a long time ago.

This is beginning to sound like the usual pointless argument about
letting Radio Shack sell amateur radios.

But back to the original issue, "What constitutes a boat anchor?"

Anything that weighs alot for what it does. And emitts almost as much heat as it does RF. (A Heathkit DX-100 comes to mind as qualifying.)

Perhaps the best criterion would be something using technology that is no longer current. Vacuum tubes for *anything* other than the final amplifier stage. Hrmmm, anything that transmits CW. (How did I ever miss this before?)

Before everyone gets going on that, it was a joke.

Hell, even a Varian 620 "computer" with the Pertec removable disk packs (15" diameter 10 Meg disks.) qualify as boatanchors. Although not in the "classic amateur radio sense".

Boat Anchors are best simply that gear that brings back fond memories to those wanting to work on them. Be they a Johnson Thunderbolt or in a nother case, a Signal One CX-7A. They're both obsolete. They're both the best that was available at the time they were manufactured. They're both examples of what was happening a ways back in our history.

Even a Kenwood Trio just about anything, but mostly, I would guess that a general consensess of opinion here requires that a Boat Anchor have more metal/wood instead of plastic and more silicon in the form of glass rather than junctions.

Well, end of rambling sermon.
I think my buzzer went off telling me it's time to go sit in the garage and look at *my* boat anchores for a while...

73 es GA from Jeff

5065. FS: NOS Lionel J-38 in Original Box

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-12 00:00:00 UTC
From: keymaster@stlnet.com
Message-ID: <6o9da2$24c$1@nnrp1.dejanews.com>
Source record: 102482
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.antiques.radio+phono

I have for sale a Lionel brand J-38 in its original box. The top of the box says "The Lionel Corporation New York, N.Y." Each end of the box says "Signal Corps U.S. Army Key J-38 File #13946 Phila. 43 Made by The Lionel Corporation New York, N.Y.

Lionel keys are less common than some of the ones from other manufacturers. In addition, the presence of the original box is uncommon, indeed. Bottom of box is excellent. The top of the box a very light pen mark and two small punctures (but is not missing any cardboard).

The key inside is in excellent original condition and includes the circuit closer and all accessory hardware. The key appears to me to be unused, has no flaws, and has an orange signal corps number stamped on the underside of the base. You won't find a better Lionel J-38.

Asking $80.00 plus shipping (about 4.00 bucks).

Thank You!

Men, regardless of who is right or wrong, we have to face one fact. I want you guys to sit down, because this could be very traumatic for you... We are all sooooo sick!!! It started out as a novelty.. that RCA Mark VII CB at a flea market... then the R390A... the Hallicrafters... now the submarine radio that fills the corner of the garage!!!

OH! What to do! I sit in the middle of this pile of outdated electronic "stuff", wondering if my brothers are thinking the same thing... *sniff*

ok... I'll have that Prozac, injection of Haldol, and a coffee.

grin

My first SSB xcvr in 1965. All of the above, FM and drifted. Dumped it--er sold it, and bought a HW32 with the triband mod kit. Remember those? I got mine to work on any two of the three bands but never got it to work on all 3!!

Don,
The Conar 400 was made in 1965 and covers 80, 40, and 15 meters. It
uses a 6DQ6 tube as a Colpitts xtal osc. and runs about 15 watts output.
That is about all the information on the transmitter except that Conar
was a division of National Radio Institute in Washington, DC.

Good luck, Don-W3HYW

Can anyone help me with the wiring on a Turner +2 microphone? I've had it since the 1960s when I bought it to use with a Swan, and now I have a Swan again but I have lost the sheet with the wiring information for the mike. This one has a built in preamp and the wires out are white, red, and black, and a ground shield. Any help would be greatly appreciated. Dave, Atlanta

5086. FS: NOS Lionel J-38 in Original Box

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-12 00:00:00 UTC
From: keymaster@stlnet.com
Message-ID: <6oaa28$ua5$1@nnrp1.dejanews.com>
Source record: 102503
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.antiques.radio+phono

I have for sale a Lionel brand J-38 in its original box. The top of the box says "The Lionel Corporation New York, N.Y." Each end of the box says "Signal Corps U.S. Army Key J-38 File #13946 Phila. 43 Made by The Lionel Corporation New York, N.Y. Lionel keys are less common than some of the ones from other manufacturers. In addition, the presence of the original box is uncommon, indeed.

Bottom of box is in very good. The top of the box has some small, light pen marks (doodling?) and two small punctures but no cardboard is missing. The key inside is in excellent original condition and includes the circuit closer and all accessory hardware. The key appears to me to be unused. An orange Signal Corps number appears on the underside of the key's base. You won't find a prettier Lionel J-38. I would be happy to give any additional details.

Asking $75.00 plus shipping. Please include your zip code when responding and I'll get a shipping estimate to you as soon as possible.

Thank You!

I collect and read ARRL Handbooks. My set is not complete so here is where I need your help.

I am missing 1926-1932, 1934-1935, 1937-1939, 1943, 1945, 1950, 1956, 1958, 1965, 1987 and 1998. I prefer to have hardcover, but will take either.

If you have hardcover for years other than the ones listed above, please send me a list and your asking price.

Thanks,
Rick WB5FDP
(ex WN5FDP)

5093. Re: Conar 400 Novice Transmitter ???

Newsgroup: rec.radio.amateur.boatanchors

The Conar was my first transmitter back in 1969. They were sold in kit form and I think I paid $25 for mine brand new. The little rig worked quite well on 80, 40, and 15. I even worked a little dx with it.

It was part of a radio/electronics course in which you learned about electronics and the wonderful world of ham radio by building kits.

There was a matching kit receiver (80-40-15) that went with it as well.

It is a great thing when people can agree and help out their fellow man, not only with hobbies but in REAL LIFE. There is no monetary value that can substitute the great feeling you get when you can brighten up each other's day.
Thank you,
Joe Pratt, Tubecntral@aol.com

Jeff,

Thanks for the great post. Like you I am very into radio history and have just acquired a collection of QST's from 1940 and 41. It is very interesting to read what was being done as far as preparing amateurs for the war effort. As you say, cooporation was splendid and the ARRL was the point organization for the government when something needed to be done.

I have to wonder if we faced the same kind of emergency conditions today whether we would quietly abstain from out of country DX (which was prohibited in 1941 and violaters who lost licenses and were reported on in QST), proof of citizenship when obtaining or renewing a license (also required then), willingly giving up traditional amateur bands, Turning equipment over for armed forces use, and finally ceasing operations all together (except for the what was then the WERS).

I like to see this sort of post. When I was about to get licensed years ago, I'd read any ham magazine that I could get my hands on, which meant that I picked up a lot of the history from years in the past. There wsa something almost mystical about the early days of amateur radio (which originally directly coincided with the early days of radio).

I've always been disappointed with the boatanchors newsgroup, because rather than a lot of discussion about the radios (which can also lead to the history of the hobby at the time of the rig), we've ended up with a lot of people buying and selling rigs. There's an oddity there, because surely the radios aren't carrying a high price these days simply because they are rare, but because they were somehow unique when they were originally sold or because they meant something to someone. The rarest rigs (did Tapetone really sell a 6 and 2 meter receiver in the early sixties, or was it in effect "vaporware" that was advertised but never produced) have less history of being used, but seem to have more history of why they existed.

Michael VE2BVW

P.S. I was just reading "Empire of the Air" (I think by Tom Lewis) that was also a PBS series a few years ago. It was an interesting book, and helps to show how amateur radio came from the same point as radio experimentation in the early days. Armstrong himself ran some of the tests on FM broadcast on the 112MHz band before the war.

This fellow seems to be an odd bird. I sent him an email a couple of weeks ago telling him exactly what I wanted (the fan), and he wrote back saying something like "sure, tell me what parts you want." I wrote back, reiterating that I was interested in the fan, and never heard anything else from him.

Which is a shame, because I'd really like to put an OEM-spec fan in my 492!

Source record: 102388

Is it acceptable to mount a 390 or an A in a solid rack mount by using the front pannel only? My rack mount has both gront and rear mounting brackets but the holes (EIA Type) only face fore and aft and I do not have any sort of support bracket. Some of the newer racks have EIA hole on both the front and side of the support brackets and lend themselves to a support bracket. I really could use some help on this issue as I have four heavy radios -3 390 type and a 75A-4 - which I would like to mount in a rack mount with a 500 CFM blower on the bottom.
Thanks for the input
Mike Taylor

>The ability to oversimplify to a ridiculous extreme never ceases to amaze me.

It's called hyperbole, Pete. I learned it in high school composition.

So, what if I'd said $75 instead of $0. We'd still see the same identical comment from the price patrol: "I've seen 550's advertised at $75 - your $150 is twice the going rate..." And you know full well these comments ("I've seen an XYZ go for $N. Your $2N price is too much.") are what we repeatedly see on the boards, usually posted by cowardly anons.

A non-BA example is when someone sells an RS rig at a price above RS's "clearance sale price" - not a day goes by on .swap that we don't see references to clearance prices. The fact that none are available at that clearance price seems to make no difference to the complainer.

Protesting prices on these boards under some phoney guise of protecting new-comers is akin to standing outside your local ham store warning each potential buyer that enters. Let the buyer shop around himself; let him learn the art of making counter-offers. The amount of money he spends and the amount the seller makes is NOYB.

Source record: 102396
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I have a set of knobs for the Heath SB-200/201 (2 large, 1 small). All have the black pointer on the skirt. They are ideal for the person who is restoring an old piece of Heath equipment.

One of the large knobs is new, and the other, while used, looks practically new. The aluminum skirts and inserts are clean and have no scratches, dings or dents - the plastic is not scratched.

The small knob is new, but the skirt is slightly deformed from mishandling (tossed into a box of larger knobs).

I would like $30.00 plus UPS insured shipping from 44134.

Hi, Mike. I have a McMurdo Silver 701 manual copy. If no one else responds, let me know, and I can make a copy to you the next time I take a trip to the copy shop.

BTW, perhaps Hallicrafter manufactured the set (I don't know), but McMurdo Silver manufactured radios from the dawn of battery sets. He apparently operated a number of companies, but was not very successful.

I have never fired up the 701, although I have been tempted on several occasions. It must have been a novel set in its day considering its small size. I would guess that most of the carbon microphones used to activate the set came from telephones. I once saw an article by McMurdo (in QST?) expounding on the benefits of using a carbon microphone. I wonder if that was an indirect promotion for his tiny transmitter?

3. Kenwood TR-7850 2M mobile rig. 40W output. 14 memories.
LED frequency readout and direct frequency entry via keypad.
Includes mic, mobile bracket, power cord, radio, and original
kenwood manual. No pl (can be added though) and very heavily
built. Used mobile but cosmetics ok. $125 + shipping

4. SB102 SOLD

5. Icom HF solid-state transceiver station including:
Icom 701, PS701 and SM-8 desk microphone. This is a 100W
DIGITAL all solid state HF rig covering 160 thru 10 meters
(excludes WARC bands). Radio covers USB/LSB/CW/CW-N/RTTY and
red LED digital frequency readout.
Has speech compressor, cw-narrow filter,
vox capability. Microphone is a condenser "gooseneck" type
with PTT button on the base. Power supply matches the radio
cosmetically. It is a 13.8V at 20 amps. Power supply also
has big speaker in it, to be used as external station speaker.
Entire setup is very clean--a few minor scratches, but front
panel is perfect. I have the original manual too. This would
make a great setup from Tech plus thru Extra. The rig works
great on SSB with the speech compression, as well as on CW with
the narrow CW filter. The bands are coming back NOW.
Dont miss the action, especially on 10M and 15M!
Entire station (wont split) $425 + 1/2 shipping.

6. Regency CB converted to 10M SSB. Radio runs 15W output PEP
and covers AM and USB. Freq coverage is 28.5-28.8 Mhz, the

phone portion of 10M. Great for mobile/backpacking. Good
condition. Includes manual, sams photofact, mic, power cord,
and radio. $65 + shipping

7. ECI Fleet Courier 30B 10M/6M AM transceiver.
Cosmetically a beauty.
Electrically a beauty. This is a classic early 1960's tube
"mobile/base" AM HF transceiver. Six crystal-controlled
channels.
Chromed cabinet. Blue front panel with white lettering.
Good cabinet and front panel. Output is 15 watts AM.
Includes microphone, AC power cord, and DC-DC convertor.
This is a classic
in very nice condition. Thought it was sold before, but buye
never sent payment. Includes 1 set of
crystals (26.1, I think) Asking $45 + shipping.

8. AT-120 SALE PENDING

9. SOLD

10. Vibroplex #6 "lightning bug" key -- late 1930's vintage with
Japanned base (no gold trim). Keyer is fully functional but
is missing both the original dit arm weight and the vibroplex name
plate. Homebrew dit arm is included. This is a nice bug --
took it in on trade, but decided that I like the auto-keyer
since I get "glass arm" sending with a bug. This one is
probably not collector quality, but works great with my S-line and
gold dust twins. $80 + shipping

11. Collins Winged PM-2 mobile power supply that goes with Collins
KWM2/KWM2A. This one is CCA fair. Serial number is
11771. Has some scratches here and there, but is
complete except for missing grey 2 amp fuse "cap" that
holds the fuse in place. Works fine. $125 + shipping

11b. Collins Winged KWM-2A S/N 325. This is one of the first 2A's
Art and company made. 100Kc calibrator crystal dates 11/69.
Condition is CCA good to fair: Cabinet has been repainted and
looks very good (a close match to St. James, but not perfect)
the trim ring is primer grey and needs a white coat of
paint. Missing 3.8-4.0 75M crystal. VFO dial is a
little bit stiff. Mic jack changed from 3/16 to 1/4".
Front panel is excellent, no wear. Chassis is very clean,
with no known modifications. Certainly a functional piece
that would require just a little TLC to bring up a CCA notch or
two. Fired up on 40M and rx/tx was fine. No manual $380

Will sell 11A and 11B as a package for $450 + shipping

12. Alinco DR-110T 2 meter, 45 watt mobile radio with TT mic,
bracket, and manual. Has PL (CTCSS) encode and decode.
Has wide band VHF receive, as well as CELLULAR and UHF

aircraft band receive! Covers 136-174 Mhz transmit/receive.
360-400, and 870-890 RX only. Very nice condition --not a beat up
piece of junk -- used almost exclusively inside the house.
$150 + shipping

13. Desk amplified Microphone - turner +3 $30
Currently wired for Kenwood 4-pin. Can rewire for you
at nominal charge (cost of mic plug from Radio Shack).
(sold 1, still have 1 to go).

14. Heathkit-COMPATIBLE Power supply -- for HW101, SB102, and
other heathkit tube radio's. No schematic. Works fine.
Much heavier
duty than original heathkit HP-23/a/b/c. Probably works with
Collins gear too with simple re-wire of connector plug.
Weighs about 40 pounds. Home brewed. Nice. $45 + shipping.

I'm located in Portland, Oregon.
No LIDS, No KIDS, No SPACE CADETS.
Happy to discuss details via email or can call you.
Mailto:K7JOE@yahoo.com
thanks,
Joe

-----BEGIN PGP SIGNED MESSAGE-----

As I recall from the R390 Manual, yes, you can mount it that
way
when the set is going to be in a fixed location, i.e. --> NOT
in a vehicle like the AN/GRC26 package. Also, for rack
mounting
it is recommeded that the top and bottom covers are removed to

allow for some additional cooling ...

5137. FS: Eimac 3-400Z Tubes (3 for $75)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-13 00:00:00 UTC
From: doragsda@polymail.calpoly.edu
Message-ID: <6od7bh$q1b$1@cscnews.csc.calpoly.edu>
Source record: 102404
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale:

I have three Eimac 3-400Z / 8163 Tubes for sale as follows:

tube #1 is new, in Eimac box.

tube #2 is new, but has a "bad" pin - the small pins that come though the the glass have larger bushings soldered to them, someone has mucked with this one and there is solder all over the outside of the bushing. You should be able to make this tube work perfectly with a little effort. In Eimac box.

tube #3 is used, but has an intermittent grid-filament short. There is a little ceramic star shaped insulator floating around in it, probably related to the short. You could probably get this tube to work fine if you mount it solid and baby it. In Eimac box.

Asking $75.00 plus shipping for all three tubes.

Peter makes some good points here. I frequently see items advertised here that I think are wildly overpriced, and I, like most, just read 'em and ignore. However, sometimes I do feel the need to comment.

I care a great deal about this hobby which has brought me lots of happy hours with great radios, most of which came to be long before I was born. I'd hate to see it get to the point where we'd see, for example, Hallicrafters S38s advertised for $1000. Some might say if a buyer is willing to pay that, then that's what the radio is worth . . and that's "market forces" at work. Maybe so, but there are such things as overpricing and gouging (not to imply that's what happened in this case), and no amount of explaining, or quoting economic theory, can alter that.

Hi Steve,
First a bit of background: In 1939 there were 51,000 US hams. In Sept. of that year war came to Europe. Of the 250 DXCC countries, 121 of them immediately went off the air (including Canada and the UK). The US maintained the strictest sense of neutrality. This was re-enforced by the ARRL, which came up with a neutrality code for amateurs. Hams were asked by the ARRL to voluntarily abide by the code, which they did en masse; this earned additional support for the amateur radio service in governmental circles.

(In an effort to streamline its operation in preparation for possible US involvement in the war, the FCC at this time introduced multiple-choice tests.)

By June 1940, the US invoked the Telecommunications Convention prohibiting US amateurs from contacting hams elsewhere; at the same time all portable and mobile operation below 56 MHz was banned (except the ARRL Field Day). At the request of the ARRL, the ban was modified to allow the League's Emergency Corps to continue work on the lower frequencies for training and drills. All licensees were required to send a set of fingerprints, a photo, and proof of citizenship to the FCC.

The FCC needed 500 radio operators to man listening and direction-finding stations - they asked the League's assistance - the League put out the word in QST and within days of that issue, the FCC had the 500 operators it needed. (It's important to note for the duration of the war, the military and government always turned to the ARRL when radio operators and equipment were needed; the League would put out the call in QST and over W1AW, and the quotas were always filled in short order. Of the 51 kilohams mentioned above, 25k enlisted, and 25k remained at home to teach radio and electronics, serve in the communications industry, and serve in WERS.)

By June of 1941, tubes and other components were in short supply; each time the military asked hams to donate parts, they were flooded with whatever was needed. Many US hams were recruited for a Civilian Technical Corps to operate and repair British radar equipment.
Also at this time, the Office of Civil Defense, at the offering of the ARRL, created a CD comm system with ham radio as its backbone (this relationship between between CD and ARS exists even today).

Because the Army needed 80m, the FCC gave hams 40m phone privileges for the first time, to make up for the loss of 80.

December 7, 1941, the US entered the war; hams were immediately ordered to go QRT. By special FCC order, the ARRL's W1AW was to continue its transmissions.

At the request of the ARRL, the War Emergency Radio Service (WERS) was created in June 1942. The GPO was inundated so the rules for WERS appeared only in QST. At the League's insistence, the FCC continued to offer amateur licensing throughout the war; this to provide standards for WERS applicants, and more importantly, to enable amateurs to prove their ability before enlisting in the armed services.

The purpose of WERS was to provide communications in connection with air raid protection, and to allow operators to continue their role in providing comms during times of natural disaster as they'd been doing as hams (WERS was not part of the amateur service, but was manned by hams; non-amateurs were permitted to serve in WERS in low level positions). WERS was administered by local CD offices; WERS licenses were issued to communities, not individuals.

WERS operated on the former amateur 2 1/2 meter band (112-116 MHz) and on higher frequencies. Again, WERS was not part of the amateur service but hams were asked by OCD to join - and they flocked to it. Until the end of the war, if a ham wanted to operate he could only do so as a WERS operator. QST fully supported WERS by publishing technical articles on building WERS gear and modifying existing 2 1/2 m ham equipment so as to meet the rigid WERS standards. Nearly every issued of QST contained WERS articles - two examples: Oct. 1942: WERS operating procedures; how to train auxiliary (non-amateur) operators. Feb. 1943: OCD's plan for selecting frequencies. A sample of WERS operations: May and July 1942 - comms support for flooding of the Mississippi and Lake Erie; 1944 comms support after an Atlantic Coast hurricane; 1945 - Western NY snowstorm early in the year, spring flooding, and a September Florida hurricane.

After VJ Day in 1945, hams were given authorization to begin operating again on the 2 1/2 m band, on a shared basis with WERS. WERS was terminated in mid-November. By the 15th of that month, the FCC released bands at 10, 5, and 2m for amateur use. The post-war era of amateur radio had commenced.

This is probably more than you wanted to know! I really love radio history and enjoy sharing it with anyone who expresses an interest.

73, Jeff KH2PZ

>Why the preoccupation with WHO I AM?

If you're going to call someone names, you should at least sign your
posts. Stand up for your convictions! Feel free to intelligently
debate me on whatever issues you might be in disagreement with.
(Darn, I hate ending a sentence in that manner!)

>My postings are VERY limited, always have, always will be.

Heh, limited to just anonymous name-calling.

>I have read the rec.radio groups for a couple of years Jeff and
>certain posts stand out, namely YOURS.
>You are an anal retentive, sanctimonious, holier than thou ass.

Oh my. Now you've hurt my feelings. I guess my comments must
really grind you up inside. I'm sorry to admit that I don't give
you a second thought once the computer is turned off.

>Boy, that dickless wonder "Somebody" has a point, I have been reading
>the groups for a while and he is right about that Jeff Herman fellow.

So far, you're the only anonymous name-caller I've encountered.

>Most of the time when he posts it's to chastise some clueless schmuck
>about how his Siltronix 1011 is ONLY 28 years old and it isn't a
>boatanchor and how Hiram Percy Maxim is spinning in his grave because
>it could have ended up in the WRONG hands.

Someone asked a question (see the subject line), and I gave one popular answer. If you don't care for it, add or subtract from it as you please.

>Boy that dickless wonder "Somebody" is a real asshole and doesn't have
>a clue.

Charles, you need to find a way to express yourself without having to resort to such gutter language.

>I say keep your responses public where everyone sees you for the
>control freak you are.

The only control over us is our ISP; no one, not anyone, can control what you or I say.

>I don't like your style Jeff, never have, never will.

Well, I'm going to be on here for a long time, so you might consider either getting used to me or ignoring me.

>You like to play Newsgroup Cop every chance you get.

No, I let a lot of chances go by without saying anything. ;)

>Probably some deep emotional problem from not getting enough love from
>your mommy as a harmonic.
>When you post something particularly foolish (IMNSHO) I will tweak you
>every chance I get.

I don't get "tweaked" at all. Life here is too wonderful to let anything bother me. The 80 degree ocean is 50 yards from my lanai, teaming with tasty fish just waiting for my frying pan. From my keyboard I can see my sailboat bobbing at its mooring. The cooling Tradewind breeze flows through the room continuously, the beautiful sunsets are so colorful that they'll bring tears to one's eyes. My morning commute on my bike takes me through the entire length of Waikiki Beach. The campus I teach at is on the slopes of Diamond Head; each classroom has a view of the ocean. The only stress I have in life is getting my 2 km swim time back down below 30:00 (10 years ago my PR was 29:30, but I was swimming 3 hours per day back then [two 1.5 hour workouts, 5:30am and 4pm]).

Please don't flatter yourself believing that you could possibly "tweak" me. But, if you ever save up enough money to visit Hawaii, do call me - I'll be glad to take you sailing... =:o

5158. HELP: Collins KWM-2A

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-13 00:00:00 UTC
From: eb5agv@my-dejanews.com
Message-ID: <6ockd9$k54$1@nnrp1.dejanews.com>
Source record: 102460
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,rec.radio.amateur.boatanchors,uk.radio.amateur

Hello!

I'm in trouble with the alignment on my recently acquired KWM-2A. The problem is that the grid drive is not stable, i.e. I can't get a constant reading in the meter. In TUNE mode, as I increase the MIC GAIN (once properly tuned), I get an increase in grid current, but it starts to decrease immediately. Power output decreases same way as grid current. In LOCK mode, I get just a second of grid indication, then it goes zero and remains there. But power output continues decreasing from about 60W (at 3.7Mc) to about 20W. Using the mic, I can get peaks of about same power (60W). Looking at the schematic, I saw that V17 (6BN8) acts as an ALC rectifier, so I changed it with a new one, without any change. Indeed, without V17 plugged, I got exactly same response from the rig. I have tried to change the driver tube (V8, 6CL6), both PA tubes (V9, V10 6146B), and also both TX mixers (V5, V6 12AT7) without any difference. In fact, checking the signal at the driver (V8 6CL6) plate, shows a clean and constant one.

Please, any idea will be welcomed!.

Thanks a lot and best regards.

JOSE

##
RCA HB-3 Handbook Series Tube Manuals. USA. These are the Black Cloth
Covered Hardbound Books put out by RCA. They are bound with 4 Metal
Rings that can be opened to add more pages as issued. I have a
complete set from Volume 1 to 8 (4 Books) as described below. They
cover Tubes from the Early stuff to the 1950's. These books are much
more thorough than the regular RCA Tube Manuals...and show Pinouts,
Specs, Curves, Measurements, Linedrawings and all relavent data on
each tube.
I would prefer to sell these as a set.....but will break them up if
nobody wants them all. These are much harder to find than the
Paperback RCA manuals....and this is a great Reference library on
tubes....all in one package!! These manuals are almost 2" Thick
each....

They are all in VG+ Condition

HB-3 Vol 1-2 ALL Types ...General, Cathode Ray Tubes, Phototubes.

HB-3 Vol 3-4 ALL Types ...Thyratrons, Misc Types, Receiving Tubes

HB-3 Vol 5-6 ALL Types ...POWER Amp Tubes, Triodes, Pentodes,
Semi-Conductors.

HB-3 Vol 7-8 ALL Types ...ALL Transmitter Tubes...the Whole Book!!!

PRICE.....$100.00 USA ......OR $25.00 USA Each......if they
don't go as a set.

##
Sylvania Technical Manual (Tube Manual). 11th Edition 1959. USA

Large Thick (2") Tube Manual. Black 6 Ring Binder.... Leather/Cloth Cover with Yellow Lettering Etched into front Cover. Covers all types of Tubes made by Sylvania. Includes Curves, Pinouts, Specs, and all other Data on each tube.

EXC Condition

PRICE.....$25.00 USA

##

CBS Technician's Handbook. Electron Tubes and Semi-Conductors. USA 1st Edition 1957. Spiral Bound Paperback Manual. About 1" Thick. Lists all CBS Tubes and Semi-Conductors. Includes Specs, Pinouts, Charts, and General Data...etc.

VG Condition

PRICE.....$15.00 USA

##

RCA Semi-Conductor Products Handbook. HB-10 Vol 1. USA . Late 50's to Late 60's. This is like the Black RCA HB Manuals above....but is for Semi-Conductors. This book is Red Cloth Covered...instead of Black.....and is almost 3 " Thick. 4 Metal Ring Binder. This pretty well covers it all as far as Semi-Conductors go.....

VG++ Condition

PRICE.....$25.00 USA

##

Tubes and Circuits. By George J. Christ. Gernsback Library No. 82. USA 1960 Paperback, 192 Pages. Chapters on Vacuum Tube Characteristics, Vacuum Tube Amplifiers, Multi-Purpose Tubes, and lots more. Illustrated.

VG Condition

PRICE.....$5.00 USA

##

RCA RC-16 Receiving Tube Manual. 1950 USA Paperback. 320 Pages. Includes Curves, Pinouts, Charts, and General Data on all RCA Tubes of the era.

VG Condition...but Spine is Cracked on Inside.

PRICE.....$12.00 USA

##

RCA RC-20 Receiving Tube Manual. 1960 CANADA Paperback. 432 pages. As above.

Good Cond. Cover Worn....a few pages with Damage at the Back of the Book....not pages with Tube data on them.

PRICE.....$7.00 USA

##

RCA RC-21 Receiving Tube Manual. 1961 USA Paperback . 480 Pages. As

Above.

VG- Cond. Some Loose Pages...and 1 Page is Missing. Split Spine. Still
a good reference.

PRICE.....$4.00 USA
##
RCA RC-22 Receiving Tube Manual. 1963 CANADA Paperback. 544 Pages. As
above.

VG Condition....cover a little Worn.

PRICE.....$12.00 USA
##
RCA RC-25 Receiving Tube Manual. 1966 USA Paperback. 608 Pages. As
Above.

VG Condition.....Tear on Back Cover...Spine Split Inside.

PRICE.....$10.00 USA
##
RCA RC-25 Receiving Tube Manual. 1966 USA Paperback. 608 Pages. As
Above.

VG- Condition....Spine Torn....Stain on Last Few Pages.

PRICE.....$8.00 USA
##
RCA RC-29 Receiving Tube Manual. 1973 USA Paperback. 752 Pages. As
Above. This is RCA's 2nd Last Tube Manual......It is big and
thick....and pretty well covers all the tubes contained in the last
Book...which was RC-30.

VG- Cond. A little rough around the Edges.....

PRICE.....$14.00 USA
##
RCA SC-10 Transistor Manual. 1962 USA Paperback. 304 pages. Just like
the Tube Manuals above......but for Transistors. Includes Silicon
Rectifiers and Diodes.

EXC. Condition.

PRICE.....7.00 USA
##
RCA SC-13 Transistor Manual. 1967 CANADA Paperback. 544 Pages. As
Above.

VG Cond.....Cover Tears

PRICE.....$6.00 USA
##
Allied Knightkit Matching Speaker for the R-100A Model Receiver. (This
is the Speaker Only...not the Radio). Small Metal Cased Speaker with
Grey Wrinkle Paint. Front Metal mesh Grill has a 2 Inch tear which has

been repaired. Doesn't look bad.... Still has the K Logo Foil Sticker on front. Has 4 New Rubber Feet. This speaker is much harder to find than the Receiver!!!

Condition....Other than the Repaired Tear.....this is VG ....Quite Nice. Paint is Excellent.

PRICE.....$20.00 USA

##

EYE TUBES.....VT-138/1629 US Army Signal Corps. VT-138. NEW In Original White Boxes with Signal Corps Writing on the Sides. Made by Sylvania Electric . Order # 595-WF-43.

NEW in Box.....Have 5 Tubes.

PRICE.....$8.00 USA Each.

##

Electrovoice 419 Base (For the 664 Mic!!) NEW in Original Box..with Original Hardware. This is the Heavy Grey Metal Base...that everyone wants for their Electrovoice 664 Mic!! These are very hard to find...in any Condition...this one is New in the Box!!

NEW....has a few Minor Scuffs....but this has never been ude...REAL NICE!!

PRICE.....$125.00 USA

##

KNIGHT Plastic Handmic. Crystal Microphone. Cat. # 57 S. 166. These little Square Plastic Mics...are "VERY" Similar to the Turner Mics that came with the heathkit Lunch Boxes!! Complete with Black Shielded Cable. I'm sure they would work great...and look great with a Heath Lunchbox.....

NEW in Original Boxes....These are Nice.
Have 2 of these .....

PRICE.....$15.00 USA Each.

##

Tung-Sol Tubes Plastic "Pocket Protector". Brand New white Plastic Pen Holder/Pocket protector that has the Tung-Sol Logo and says TV/Radio/HIFI Tubes-Transistors. Has 3 Diamonds shapes also in Red/Blue/Turquoise.....this is COOL!! Be the Grooviest Nerd/Boatanchor Boy on the Block!! HIHI.

NEW...Never Used.

PRICE.....$5.00 USA

##

AMECO Radio Amateur Logbook. Approved by FCC for Fixed or Mobile Use. American Electronics Co. Mineola, NY. Cat # 14-01. Smaller sized Spiral Ham Logbook. with Green Cardboard Cover....has a Picture of a Man wearing Headphones on the front. About 50+ Pages.

NEW...Never Used.

PRICE.....$8.00 USA
##
DRAKE Logbook. R.L. Drake Co. Ham Radio Logbook...Large sized with
With Cardboard Cover.34 Pages. First 2 Pages is Full of Photos of the
Drake Plant...showing how Drakes are Made!! Last 2 Pages are full of
Photos of Various Drake Gear...Mostly 4 Line Stuff. Back Cover Says
"RL Drake Co. Logbook".....in a Psychadelic White Font on a Baby Blue
Background that looks like it should be on a 1967 Beatles Record
Album!!!! Again...another Cool Piece of Drake Literature.......

NEW....Never Used.

PRICE.....$20.00 USA
##
Hallicrafters DX Log. For Amateur Radio. 24 Pages Large Sized. Front
Cover Has an Illustration of a Ham sitting at his Station....which
consists of Hallicrafters Gear. Inside front Cover is an ad for the
SR-500 Tornado Transceiver. Inside Back Cover is an Ad for the SX-117
Receiver. Back Cover has an Ad for the HT-44 Transmitter. All ads have
a Photo of the rig.Contains a Checklist of all ARRL Countries and an
Airmail Postage Rate for all countries in the Back......Real Nice.

NEW.....Never Used. Whgite Parts of the Cover are a little dirty..not
bad.

PRICE.....$15.00 USA
##
Collins Amateur Radio Logbook. Part # 523-0755820. Large sized. July
1967. 24 pages. Front Cover has a Great Photo of a
KWM-2/312B-5/Amp/Collins Mic Station on a Desk. Back Inside Cover
Lists Collins accesories for the S-Line and KWM-2.

NEW...Never Used. Nice!!!

PRICE.....$20.00
##
ORIGINAL Colour Brochure. Radiophone Co. Of CANADA. Vancouver, BC.
"Build an ULTRADYNE Model L-2 Receiver. This 3 Section Foldout
Brochure appears to be from the 1920's and is Advertising this great
Battery radio Kit which uses 8 201-a Tubes. Front Cover Has a Photo
of the Radio in a Cabinet, and the Guts of the Receiver showing the
Tubes and Coils etc. Great description of the radio Inside with parts
list and shows the Original Box all the Parts come in. Original Price
of this USA Made set was $30.00 for the Kit. This is a Very Hard to
find Original Brochure from the Early 20's!!!!!!

Condition.....Like New!!

PRICE.....$20.00 USA
##
WLS Family Albums. These Magazine sized Books were put out by WLS in
Chicago during the 1940's . WLS is called the "Prairie Farmer Station"
on the Cover of the Books. These books have Full Colour
Covers......and Inside are Chock full of Great Photos of all the

Radio/TV Personalities and Stars that appeared on the Station!!

5162. Hammarlund HQ170

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-13 00:00:00 UTC
From: Paul Huff <Paul.Huff@moa.net>
Message-ID: <35AA29B2.7849@moa.net>
Source record: 102464

Hello,

I'm a complete novice at this News server stuff, so please let me know if I violate any etiquette, but as a ham I was a novice back in 1970 (during high school). My first station included a Hammarlund HQ170 which was given to me by my grandfather (W0MA - SK now). That receiver was a wonderful rig and I was the envy of all of my novice friends who were trying to use much less selective receivers on the crowded novice subbands while using our "rock-bound" transmitters.

Being a typical high school kid with no real regard for the future, I ended up selling that HQ170 (dirt cheap) to get a little money to help with college expenses. I now, of course, regret the act and I hope to some day scrape up enough money to purchase another HQ170 to remind me of my grandfather and my novice days.

My question is this: Are HQ170's still available from different collectors, and what would be a typical price for one?

By the way, if any of you purchased an HQ170 (with an unusual access hatch in the top of the cabinet) from a dumb young kid in Melvindale, MI about 1975 and would like to get rid of it, please drop me a line!

Thanks and 73,
Paul - N8XMS

Source record: 102469

I have 2 813'3, one unused but not in box, the other is serviceable.
Also, 2
ceramic sockets for them. I have 4 811's all serviceable. One has a
loose plate
cap but works fine. Also 4 ceramic sockets mounted on a plate about 5 by
5
inches. Will sell it all for $35

73, Ben

Don't we all, Joe? <g>
Yet most of us have the courtesy and common-sense to "mind our own business". We realize that we are not part of the particular deal, we are not the seller nor are we the buyer. The transaction is a "private" transaction between the seller and the buyer, and nobody else...we realize that and we respect that. We are "uninvolved observers", or "onlookers". As such, we might "shake our heads" in amazement, or even disbelief. Yet we "stay out of other people's business", and "mind our own". We do not in any manner "interfere" with a seller's transaction with a willing buyer. Common sense... and courtesy...tell us that's the "right" thing to do.

> that's what happened in this case), and no amount of explaining,
> or quoting economic theory, can alter that.

Most of us, as hobbyists, would agree with this, Joe, and would like to see our hobby remain a "reasonable and affordable" hobby. Most of us will not pay what we feel to be an "unreasonable price"; we will simply continue searching for a price we feel comfortable paying, a price we personally consider to be "fair". That's the nature of the "free marketplace", thankfully.

Regarding that $1000 S-38...how thick did you say the gold plating on the chassis was? Perhaps we can negotiate... <g>

Nothing like over-cross-posting. Some of those newsgroups don't
even exist, and most of the rest are inappropriate.

You might want to check out that VHF magazine put out by CQ Magazine, I
can't remember the name. The issue on the newsstand now, at least earlier
today, has an article about refurbishing the Swan 250. I haven't read it,
so I don't know how much it's simply about cleaning up the rig, and how
much about getting one going again. But it might be helpful if you did
get one.

On the other hand, maybe everyone will want because of that article.

From: "Tech. Editor" <elektuur@euronet.nl>
Message-ID: <6ofefr$b8v@news.euro.net>
Source record: 102328

I am looking for crystals, rx and tx, preferably pairs, for the Pye FM-10B
PMR.
The tx formula: fxtal = fa/32
The rx formula: fxtal = (fa-10.7)/3
In particular I need the repeater frequency 145.725 MHz, tx and rx, and
145.550 MHz
I am sure there must be lots of these xtals around in the UK.
Any help appreciated, please have a look in your junkbox!
I pay postage + 1 IRC for any usable xtal.

You are correct. Owing to much of the commercial spam I have received over the last few months, I have filtered my mail from several domains. I apologize if your mail was filtered.

Interesting that your responses were to partial statements taken out of context. Direct quotes, to be sure, however, not accurate representations of content.

But that is, in this free domain, your perfect right. Sorry to have offended you, Bill.

Mike,
Yes it is ok to use the front panel to hang the RX but angle brackets make installation and removal a lot easier and safer for one person. Fighting an 80lb RX into a rack and catching the first screw can be a bitch.

I just obtained an 8 tube, Silvertone Communications Receiver. It appears to be from about 1936-7. Unfortunately, the small paper tag with the model number info is missing. Does anyone have info as to the model number, date of manufacture, etc? Here's some more details:
6K7 RF Amp
6L7 Mixer
6C5 Ocs
6K7 IF Amp
6Q7 Det,AVC, 1st AF
6F6 Audio output
6C5 BFO
5Y3 Rect.
Black wrinkle cabinet dim, 21"x10.5"x11"
Dial dia 7" Spkr 7" Jensen (built-in)
BFO is on a separate chassis
Here is a link to a pix of the radio:

5194. Re: R390 & R390A in rack mount

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-14 00:00:00 UTC
From: Josh Rovero <rovero@sonalysts.com>
Message-ID: <01bdaf4d$a9ad6e60$d6d706c6@lap_rovero.sonalysts.com>
Source record: 102346

I built shelves using 5/8 marine plywood and "L" brackets. This allows me
to insert the heavy gear in the rack and have it fully supported, then
secure the front panels to the rack.

Otherwise it takes 3 men and a boy to insert one of those heavyweight
radios into a rack....

75A4 in vg condition ser#834 one small(less than 1inch) scratch on
the right rear cover as far back as you can go(easy touch up) The
rest of the cabinet and front face is excellent condition.One filter
3.1 and spinner knob . Radio works good, a little less sensitive than
my other 75A4 may need alignment?(or tubes)
$695 or would consider trades . Please email me for my want list.
Thanks Port

We ought to have an appropriate punishment for such vandalism -- death by firing squad... I've seen quite a few radios ruined by stuff like this. I guess the guys who decided to silk-screen the lettering on never took the long term appearance of the receiver into consideration -- I mean, you'd only have to own a car to know that painted metal eventually gets scratched from use.

National had the right idea with the HRO cabinets, having the lettering engraved and paint filling it in. At least you have a fighting chance of maintaining the original appearance of the cabinet through a repaint that way.

If I take a look at the front panel of my HQ-180 -- I don't have the "A" variant, but if they look similar -- it appears to me that you could get real close with white dri-transfer lettering, and perhaps a satin clear-coat finish to protect it, once you've got the base panel back to the original battleship gray colour.

It would be a bit of craftsmanship to get the hash marks for the smaller controls to look correct, though... you'd have to have those all at the correct length and angle or it would look real cheesy.

Good luck in your search for the panel, anyway...

C.K.

##
Vibroplex Bug Original Model PARTS SET ONLY (Quite Restorable).
Serial # 252179. Grey Wrinkle Painted Base and Chrome Hardware. Gold
Coloured Nameplate with Broadway, NY Address.
Everything appears to be here except the Long Flexible Metal arm that
holds the weights...and the weights . The Paint finish is VG with just
a few small chips and scuffs. The Chrome aprts are nice. This could
easily be restored if you want to purchase a few parts....or there are
plenty of good parts to save quite a few other bugs!!

VG+ Condition

PRICE........$50.00 USA
##
Electrovoice 419 Base...for the EV 664 Mic. This is the Base that
everyone is looking for to attach to their 664 Mics!! Heavy Grey Metal
Base with a Switchcraft Toggle switch professionally installed on the
Front of the Base. 4 Rubber Feet.

Hard to Find!!

VG+ with just a few scuffs....

PRICE........$75.00 USA
##
Electrovoice 419 Base....as above.....But this is a "REPLICA". These
were made by a couple of Guys in Michigan ....and were formed from an
exact Mold of the original...except they are made of Solid BRASS. Less

than 20 of these were made.....due to the fact they had to all be hand
Finished. The majority of them were painted Black Wrinkle and had a
Red Collins Logo on the front.......but this one is unpainted with no
logo. It is Highly polished Brass....Gold Colour..with somewhat of a
Grain running through the Metal. Looks pretty Neat!! This one may be a
One of a Kind!!

NEW...Never Used...but looks somewhat Rustic due to the Material and
Finish.

PRICE.........$100.00 USA
##
German WWII HandMic. This Mic Looks like it was probably used in a
German Tank!!! Nice little Palm sized Black Bakelite and Metal
Handmic. With Neat Styling. Has a Red Push to talk Button on the front
that has the word ""DRUCKEN" engraved into it. Over the front Grill
area of the Mic is Engraved in Red ...the following words... "Fiend
hort Mit!" ....which I am told means... "The Ememy is Listening!"..or
similar.
This is a Great Piece of WWII Radio History....and I would think there
is not a lot of these in North America!! I have never seen another one
of these before..Have You????

Has a Cloth Covered Cord.

VG+ Condition......

PRICE..........$75.00 USA
##
KNIGHT Plastic Handmic. Crystal Microphone. Cat. # 57 S. 166. These
little Square Plastic Mics...are "VERY" Similar to the Turner Mics
that came with the heathkit Lunch Boxes!! Complete with Black Shielded
Cable. I'm sure they would work great...and look great with a Heath
Lunchbox......Early 60's????

NEW in Original Boxes....These are Nice.
Have 2 of these .....

PRICE.......$10.00 USA Each.
##
American Model B208BC Handmic. Grey Painted Metal Handmicwith Grey
Coiled Cord. Front of Mic has a Grey Metal Grill and has a Foil Logo
Sticker on Front. Mic is Square shaped. Made in USA Late 50's Early
60's ???
Slide to Talk switch. Has original Warranty Registration Card.

NEW in ORIGINAL Box.

PRICE........$10.00 USA
##
American Model C501G Carbon Mobile Microphone. Low Impedence, 4
Conductor Coil Cord with 4 Pin Amphenaol Connector. Box says...List
Price $33.00.

Early 60's???
Heavy Grey Metal HandMic.....well made.
Has Original warranty Card...and Mounting Hardware.

NEW in ORIGINAL Box.
Have 2 of these.

PRICE..... $10.00 USA Each
##
Turner U9S Dynamic MICrophone. HEAD ONLY.....No Stand. Large Heavy
Bullet Shaped Mic that rests on a V shaped Swivel Frame.

VG+ Condition......Some Paint Scuffs....Untested on the Air.

PRICE.....$50.00 USA
##
Electrovoice 641 MICrophone. Dynamic High Impedance. Head Only....No
stand. 5" Long narrow Bullet Shaped Mic. Base and Tip of Mic are
Chrome.....Middle part of Mic is Grey Painted Metal. Has a Slide swith
to activate. Nice Heavy well built Mic!!

VG+ Condition.....Untested on the Air.

PRICE.....$50.00 USA
##

Excellent amplifier for 2 meters. Pair of 4CX-250's complete with built in power supply, metering and control circuits, and RF deck. Requires less than 20 watts of drive for 750-800 plus watts output. EXCELLENT construction in two 19" rack panels. This is a great amplifier, and will run lots of power for a BIG signal on 2 meters. $795 plus UPS.

:
If it hasn't been modified to bad (the jacks are original), the Mic plug is a standard stereo 1/4" plug. Tip is prob mic audio hot, the ring is ground to transmit (ptt) and the sleeve is ground. Try to use a high impedance mic cartidge like an un-powered D-104 or any similar crystal cartridge.

I used to service 1011's all the time, they are a fine batch of radios if kept up properly.

If you have specific questions about them, email me direct at the address below my name.

From: Tim Cook <timcook@erinet.com>
Message-ID: <6oh06u$ssn@eri.erinet.com>
Source record: 102363

For sale: National NC-183D in exc. condition with original manual. Works on all bands and alignment is super. The only problem is that the RF gain has to be reduced slightly to avoid distortion. The audio is great at that point. It may be the AVC tube which I don't have. $225 local pickup in the Dayton, Ohio area or buyer pays for commercial packing and shipping. This radio is all original and real nice condition. Just don't have room for it. Please email direct if you are interested. May consider a smaller good quality SW receiver or a 486dx4-100 system with at least 1g harddrive.
Thanks
Tim

Hello out there,

I had an earlier post looking for somebody who has or does silk screening for a Hammarlund HQ-180A. Well, looks like the silk screen is a fat chance. So since that is the case, does anybody out there have a junker HQ-180A with a decent front panel. If the price is right I will be glad to take it off your hands (grin). Just got finished painting the cabinet (it was a very ugly gold color). Now I am looking to do the rest of the radio (the face is gold too, YUCK)!!!! Please email me at bierbier@bellsouth.net.

Thanks and 73's

Gary

>Franks W4RF
>615-646-8518

Just thought I'd mention...

I have the original factory owner's manual for the HQ-129-X, with
schematic diagram, and probably could be induced to photocopy it for
the new owner if you don't happen to have one to ship with the unit.

Seems to me I also have some articles about various upgrades one can do
to the 129-X, the most basic one being to change out all the paper capacitors
for ceramic ones, if that hasn't already been done. And in my own unit,
I found it useful to rewire the BFO so that its plate voltage came from
the regulated supply line, for greater stability. Whoever buys this
fine receiver is invited to e-mail me for such information if they are
interested.

Also, I went to the trouble to modify my own HQ-129-X for full QSK
break-in operation, and it worked like a dream -- separate gain control
for "key-down" and when that's properly adjusted, your own CW signal
sounds as if it's a nice, solid 5 x 9 signal being received normally.
It was really fun to work QSK CW with this receiver. I could also make
infor on that mod available.

Ah, the fond memories! But these days, the main use I put this fine
receiver to is tuning in WWV to set my watch, and AM broadcast listening
(as well as shortwave listening). And I must say, it's a delight to
listen to the AM band at night and have a _real_ AGC circuit - the
volume never varies, just the background noise level. And that noise
limiter... it really WORKS! If only they would design modern
AM receivers as well!

Hi Guys;
I have for sale a Hallicrafters S-76 General coverage receiver.
Its in really exc. shape and playing, but i cannot attest to its calibration
or alignment.
Every thing works , including that REALLY BIG s-meter for us visually
challanged guys!
The inside is really clean with out rust, some chassis discoloration, but
light. NO RUST!
I have a .jpg picture to send to interested parties, but it is not that good.
Oh, one knob is still one but mostly broke, its the on-off/tone knob!
Price is $125 plus some shipping from LI, 11758, 40lbs!

>>The ability to oversimplify to a ridiculous extreme never ceases to amaze
>me.
>
>It's called hyperbole, Pete. I learned it in high school composition.

I"m hip. And your argument is also pretty much a high school composition.

Keep in mind that I did not begin this argument. I didn't flame Tubecentral over his prices...Another author commented on his prices.. I defended his right to do so after he was flamed in response.

Regarding the 'privacy' of these transactions: There was no transaction...it was an advertisement. And, as I posted earlier, advertisement is open to rebuttal, as part of the free market system. Don't tell me you haven't seen or heard the ads for your local car dealer with the tag line, 'where you save more money," or "why pay more?" Valid questions, legitmately asked.

The issue at hand is also about prices, not profit. The issue of how much money is actually being made has not been addressed, nor is it relevant to this discussion.

And to further the point, the author who commented on TubeCentral's prices, as harsh as he was, raised legitimate questions, as, again, is his right. Just as it is TubeCentral's right to ask for prices that are above or below the prices asked by competitors for precisely the same commodity under the same conditions. Commentary on prices has been a time honored way of spreading the word about any vendor to any customer. Again, don't tell me that you have not told a friend that you got a good/bad deal on a radio/tube/car/hamburger at one vendor or another. Word of mouth is the most effective and mos desireable of advertising. It is highly sought after. The offending author availed himself of his right to comment on the prices posted, offered his opinion, harshly as it was, but it was his right to do so. My defense of his right to do so was the point of my first post. The deteriouration of the dialogue from that point resulted from argumentative commentary not related to these direct issues. That is also your right, and the right of the others involved.

But don't hand me any horseshit about privacy and what is and is not private business. The matter involved, the issues involved focused on an advertisement, not a transaction between individuals. An advertisement in a public commentary forum. With that decision to post, the matter became fodder of commentary, and the business of, for and by everyone and anyone who chooses to take up a keyboard.

And the final thought....the word privacy has no place in this discussion...If the matter under discussion was to be so damned private, it should not be posted on the Internet.

Interesting to note, here, is that I offered Tubecentral to take this matter private several days ago. He has not responded to either the offer, or the opportunity and has himself, in conjunction with others continued these threads in a public forum.

If this matter is so injurious to his rep, or offensive, or private, why has he, nor anyone else who has addressed this issue availed themselves of this opportunity?

Also a valid question.

Thanks, Jeff for the Hyperbole. Thanks for having the stones to comment under your own name.

5228. Sell or Trade for Amp or Rig

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-14 00:00:00 UTC
From: DavidC <davidc@bit-net.com>

Source record: 102419
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.boatanchors

I'd like to trade straight-up my TenTec Corsair I and Hercules 444 solid state amp combo for an amp or rig.

They are in great shape with manuals. Both are stock, unmodified. (Package includes a
non-TenTec headset w/boom mic.) The 444 comes with the matching power supply and original boxes. All necessary power and interconnect cables are included (Note: The Corsair I auto-bandswitches the 444!)

TenTec no longer supports the Herc. 444 as it was their first solid state amp and replacement finals are troublesome to find (though the finals are so well protected that with the Corsair I as the exciter they are about bulletproof!). They do still support the Corsair I. Note: The 444 is capable of delivering 700+ cw output (real dc, not pep), though running it soft given the concerns about the finals I would rate it as the equal or better of any 500-550w solid state amp. A variety of additional filters from TenTec and IMRAD are available for the Corsair.

I am looking for the following:

1. A dual 3-500z 160-10m amp w/qsk or easily modified for qsk (or equivalent).
2. Kenwood TS-940SAT
3. Kenwood TS-690SAT w/SSB & CW filters.
4. $1000. cash.

73, DavidC AA1FA

On 7/13/98 11:25PM, the Legend in His Own Mind, The Great Peter Maus <petermaus@aol.com> wrote:

> >>The ability to oversimplify to a ridiculous extreme
> >>never ceases to amaze me.
> >
> >It's called hyperbole, Pete. I learned it in high school composition.
>
> I"m hip. And your argument is also pretty much a high school composition.

Please excuse all of us for being so ignorant as to not meet your standards, Peter Maus. Having just completed a thread of your past week's messages, I find you telling us that some of us "miss the point", some of us have "no virtue", some of us charge "absurd prices", some of us "oversimplify to ridiculous extremes", and some of us "draw absurd conclusions". I also find Peter Maus using such self-righteous phrases as "...just be advised...", "Now, the point, here, Joe, is that...", "I have to agree that, service notwithstanding, your prices are more than a bit high"..."clearly they are what the market will bear, but not nearly the going rate", "I have taken no cheap shots, pal...", "nor do I have any personal agenda here".

Peter Maus, perhaps I should bow to your infinite wisdom, virtue, understanding, education, intellect, and whatever other aspects of your person and personality which you believe to be superior to that of others. However, Peter Maus, I do not believe that you are in any manner superior to anyone else. Until proven otherwise, I will continue to believe that you wipe your ass just like everyone else does, and that you are no smarter, no better than anyone else. Strike me down if you wish, Peter Maus, but I do not believe that you are God. Not anymore than I am, or anyone else here is. Nor are your words of wisdom any wiser than those of others here (even those such as myself who "miss the point", the "Peter Maus Point"). In fact, to be quite frank, Peter Maus, I have very little respect for anything you may have to say, given what you have said here already. Your own words (every quotation above, each and every one, is a direct and exact quotation of your own words during the past week in your various messages here) have resulted in this loss of respect for you and your disrespect for those others here who suggest a viewpoint which differs from your own. My opinion of you, and what you say, is of no more importance than your opinion of me, or what I say, or anyone else here, or what they say. Such are our freedoms and rights to believe what we choose, and to respect those who we choose (for reasons which we choose), in this free country, Peter Maus.

> Keep in mind that I did not begin this argument. I didn't flame Tubecentral
> over his prices...Another author commented on his prices.. I defended his
> right to do so after he was flamed in response.

You also said "Now, the point, here, Joe, is that..."
You also said "I have to agree that, service notwithstanding, your
prices are more than a bit high."
You also said "Clearly, they are what the market will bear, but not
nearly the going rate."
You also said "I have taken no cheap shots, pal...".
You also said "...nor do I have any personal agenda here."

No, you did not "begin this argument", Peter Maus.
You continued (and continue) to fan the flames.
You have "defended the rights" enough, Peter Maus.
It's time to DROP IT, and act like a civilized participant
of this newsgroup, if you choose to participate as such.
Of course, it's your right to act like an asshole here,
too, if that's what you choose to do. We won't "miss the point",
or "draw absurd conclusions", Peter Maus.

> Regarding the 'privacy' of these transactions:
> There was no transaction...it was an advertisement.
> And, as I posted earlier, advertisement is open to rebuttal,
> as part of the free market system. Don't tell me you haven't seen or
> heard the ads for your local car dealer with the tag line, 'where you save
> more money," or "why pay more?" Valid questions, legitmately asked.

Sellers advertise their wares here, and interested buyers respond.
Buyers advertise their "wants" here, and interested sellers respond.
The newsgroup ads are public; most responses are made privately, via
e-mail. The purpose of the seller's ad, or the buyer's "wanted" ad,
is to elicit an offer to buy, or an offer to sell...."for sale" or
"wanted" ads are NOT posted here to elicit public comment, criticism,
condemnation, offensive or defensive remarks, or anything else from
Peter Maus, nor from anyone else. I will not argue your "rights" to
act like a jackass, Peter Maus, if you so choose, but I do not for a
minute believe that anyone posts a "for sale" or "wanted to buy" ad
here for the sake of hearing what Peter Maus has to say about it.

> Commentary on prices has been a time honored way of spreading the
> word about any vendor to any customer.

It also is a "time honored" tradition to respect the rights of any
seller to ask any price he wishes, as it is tradition to respect the
rights of any buyer to offer and/or pay any price which he wishes.
Without interference from any "third party". Without judgemental
public commentary upon the ad, the merchandise, or the price.....
from Peter Maus, or from anyone else not a direct participant in
the transaction which may materialize.

> It is highly sought after. The offending author availed himself
> of his right to comment on the prices posted, offered his opinion, harshly as

> it was, but it was his right to do so. My defense of his right to do so was
> the point of my first post.

Who asked for your "defense", Peter Maus?
This is not "People's Court", this is "rec.radio.amateur.boatanchors".
Peter Maus was not elected, nor appointed, "Boatanchor Defense Attorney".

> The deteriouration of the dialogue from that point resulted from
> argumentative commentary not related to these direct issues. That
> is also your right, and the right of the others involved.

The deterioration of the dialogue resulted from your implications
of your superiority, as compared to the intellect of others who
"miss the point", others who have "no virtue", others who "draw
absurd conclusions", others who "oversimplify to ridiculous extremes".
Look in a mirror, Peter Maus...re-read your own messages here, and
then tell us who amongst us contributed so very much to the deterioration
of the dialogue here.

> But don't hand me any horseshit about privacy and what is and is not
> private business.

Would WE hand you any horseshit here, Peter Maus? Nah...we don't have
any horseshit here to hand you. You seem to have cornered the market
here all by yourself. The rest of us just "missed the point"!

> With that decision to post, the matter became fodder of commentary, and
> the business of, for and by everyone and anyone who chooses to take up a
> keyboard.

Horseshit! The matter is an advertisement to sell, or an advertisement
to buy an item considered to be, or to be related to, a "boatanchor".
Fodder is fed to horses, which produce horseshit. Wrong newsgroup,
Peter Maus.

> And the final thought....the word privacy has no place in this discussion...If
> the matter under discussion was to be so damned private, it should not be
> posted on the Internet.

I tried to make this entire message "private", Peter Maus.
I tried to e-mail it to you, at your address <petermaus@aol.com>
I tried twice. Both times, it was returned stating that "User is
Not Accepting Any Messages from this Sender". Either your mailbox
is full (of fodder), or you are "filtering" your e-mail. Whatever.
Your right, Peter Maus.

> Interesting to note, here, is that I offered Tubecentral to take this matter
> private several days ago. He has not responded to either the offer, or the
> opportunity and has himself, in conjunction with others continued these
> threads in a public forum.

See above paragraph regarding: Peter Maus is not Accepting Any Messages...
Too Much Fodder. Too Much Horseshit. We now return you to our regularly
scheduled program..."rec.radio.amateur.boatanchors". Enough of this

horse, or bull, or whatevershit.

I've got an old RCA Model 5-T "tombstone" radio I'd like to sell...
AM broadcast band, plus shortwave coverage from 1.8 to 6.0 Mhz...
working like a charm, in beautiful shape. Any offers? Care to
make an offer, Peter Maus? I'll even consider yours...but please,
NO fodder, and NO horseshit, Peter Maus...please!

Please, boys.

This is like abortion, and whether Radio Shack employees should be damned for asking for your name, address and phone.

Reasonable minds differ.

Heck, why don't we celebrate what we have in common? We're all radio nerds (if you're not, why are you here?).

Dudes!

First, it's probably "moss", not "mouse".

Second, I don't know who, if anyone, to disagree with here: On the one hand, the guy taking undue advantage of what the market will bear, or Maus, for castigating him.

While I appreciate the spirit of the First Amendment, we are being "censored" by one-another, not the government - there is a distinction. But is it right, regardless of the legalities, per se, to chill the rights of others to engage in the "intercourse" of ideas people have nevertheless come to expect in this great nation of ours?

I don't know. Or is the distinction as great as, e.g., that between the Courts, who could not imprison OJ, because he was not proven guilty beyond a reasonable doubt, and the "court of public opinion", where we can all discuss that issue the way we know it is - he did it.

Come visit our webpage! Better yet, come visit the Odessa Texas Nov 7th
& 8th Hamfest! This is our 15th year and we are still growing. Last
year we filled over 200 tables and 2,000-2,500 in attendance over two
days. You will be impressed at the fest.
This year we offer online registration for those that don't want to see
their registration lost in the mail... or for those that would like to
register but may not be able to make the Hamfest.
You need not be present to be eligible to win a "major prize". You do
need to be present to win a "door prize". Our webpage url changed as of
yesterday, so if you have us bookmarked, you might want to re-visit the
page.
See you in November!

> Thanks for the input
> Mike Taylor

Ouch! My back! AAAAAAARRRGH! Always use angle brackets for heavy rack mount equipment. These racks & front panels are not designed to properly hold the tremendous torque generated from big, heavy BAs. Also, big safety & comfort factor. Go to Home Depot & buy 2" x 2" light ga. (1/8" thick material) angle stock, cut to size, drill, and mount in the cabinet under the radio. Should be adjusted so that the front screws line up, and serve only to keep the radio from sliding out. They make special tracks, spring-nuts, and brackets just for this purpose (try Electronic Enclosures in El Segundo, CA - a Wyle Co.).

Also, a 500 CFM blower will suck your shoelaces off, and you will find yourself saying "Huh?" a lot when people talk to you. It's very noisy & not needed for typical BA installation. Better approach, assuming you really have to have a fan, is a small low-speed fan mounted in the top of the cabinet. Vent holes in top & back usually sufficient for many 100's of watts, however, in my experience.

Good Luck!

Don Davis DXGUY@earthlink.net

Message-ID: <35ACB751.A84BAC16@btinternet.com>
Source record: 102287

My RA19 went dead the other day [sobs]. No fuses popped, no Valve heaters illuminating. I suspect the Transformer T1. I've heard that the rectifier tube goes occasionally (valve 20) but this wouldn't effect the heaters would it - I guess it rectifies on the output of T1 not the input.

Apart from the mains-switch (and fuses) is there anything (active) in the way from the mains input to T1?

If it does turn out to be the transformer where can I get a spare one?

5251. MANUALS FOR SALE- UPDATE

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-15 00:00:00 UTC
From: "David L. Stinson" <arc5@ix.netcom.com>
Message-ID: <35ACD608.3587@ix.netcom.com>
Source record: 102292

The manual requests are coming in fast.

Just so everyone knows the "odds" in the lotteries
for the most popular manuals, here's a sample of
the manual and number of people who want it:

Eldico S-119 7
ART-13 12
BC-211 6
Hallicrafters:
Every manual wanted by at least 3 people.
Some as many as 6.
ARN-5 5 (hmmm!)
BC-312/342 6 (double-hmmm!)
NAVSHIPS RBH 10 (ditto)

As you can see, there's going to be a lot of name drawing.

I know there are some of you who have been in on
several of my lotteries and never been drawn.
I'm really sorry that I don't have multiple copies
to go around, and I can't think of any more "fair"
way of doing this. I always wait a couple of days
to give everyone a chance to get in, then draw names.
If you know a better way, I'm all ears.
I know I could just "auction" them, but original
manuals are such toughies to get and I really feel
I should give everyone on BA an even shot based on
something besides price.
I'm not that "noble" when it comes to gear.
I got bills to pay, too. (heh heh)

Will draw tonight and send email to the winners.

Message-ID: <35ACDF62.676F@ix.netcom.com>
Source record: 102296

For Trade:
Collins ARC-27 control head.
Good complete conditon.

Will trade for any of the
following "ARC-5"-type control heads
or shock mounts:

Any control head for ATA, ARA other then 3-receiver.
Any shock mount for ATA or ARA.
Anything for RAT or RAV.
AN/ARC-5 types C-24, C-25, C-26, C-27,
C-29, C-39, J-17, J-28, J-34.

Will also trade for interesting ARC-type-12 control heads
and junction boxes. Especially interested in those
which control transmitters. Priority for C-14 which
runs the early R-13 (black wrinkle paint) and
the C-15 which controls the ARC-type-17 set
(painted grey).

Michael, VE2 BVW, makes a very important point. The radios themselves are fascinating, but the history of how they came to be, and why, and the people and companies who created them is even more so.

Like Michael, I also recently read Tom Lewis' EMPIRE OF THE AIR (and reread it!) as well as viewing the video. This book really connects up a lot of history of the people who were the pioneers who created this technology and the industries it spawned, and is utterly fascinating. It also helped rekindle my long standing interest in amateur radio, and has motivated me to upgrade my license, become more active in the hobby again, visit the great BA sites I have learned about through this NG and motivated me to do even more reading.

I love reading old QSTS, and seeing not only the radios I first used as a new ham in 1955, but also the older equipment that my older ham friends would tell me about and sometimes show me. This is the true magic that makes this such a fascinating area of knowledge, for me, at least. I'll bet there are lots of others out there as well.

Thanks to all who contribute (in a positive way) to this newsgroup.

5261. Sell Separately: Hammarlund HQ-170 & O.E.M. Speaker

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-15 00:00:00 UTC
From: Karlan@juno.com
Message-ID: <6oj381$q16$1@nnrp1.dejanews.com>
Source record: 102302

Hammarlund HQ-170 and matching Hammarlund O.E.M. Speaker--will sell separately or together. Both in very nice shape for their age (see photos).

For Radio, see photos of four sides of it at:

http://www.geocities.com/Athens/Forum/3417/hq-170.jpg

For Hammerlund O.E.M. Speaker, see photos of four sides of it at:

http://www.geocities.com/Athens/Forum/3417/hq-spkr.jpg

If Radio or Speaker purchased separately:

Radio = $200 plus shipping

Speaker = $150 plus shipping

If you purchase both of them, then $300 for the lot plus shipping.

Radio needs one burnt out light bulb replaced behind one of the meters.

Hi Dave OM,

WOW, $100 for a 450TL. The ones I got I think I paid $5 each for
them.
But, these days, you might get your asking price; from what I have read
here recently, the sky is the limit! The filaments are fragile, so if
it is still in its sprung shipping cage, that is good.
I had a rig with a pair of them; and I am thinking about building
another similar rig. But I am looking for 750TL's, which are harder to
find.

73 and GL,

Don, W6JL, BSEE Cal Poly Pomona, class of '65.

I have the following Radio, and electronic equipment for sale. Will consider trades for Pentium computer EQ. All working last time tested unless noted. Shipping is extra.

Thanks

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $200

. Siltronix 1011D excellent condition both in looks and operation. Scale of 1/10. I would rate 9.5. $200

. Swan 270B Transceiver has internal Power supply 80-10 meters. Looks good works well. $225

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but don't not transmit. Not able to test. Looks are 7/10. As is $80.

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $100

• Traynor, Group Two B- Audio Amp Head (all solid state). High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $125

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $125

. AR Inc.- Stereo Amp, all solid state. $100

5269. Help on Harris RF-110A/RF-124 Amplifier

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-15 00:00:00 UTC
From: Robert Fanfant <fanfant@ix.netcom.com>
Message-ID: <6ojgfr$pfq@news.microsoft.com>
Source record: 102310

Has anyone out there figured out how to:

a) wire up the connectors between the power supply (RF-124) and the
amplifier (RF-110A).
b) have documentation or schematics for these units
c) what did I have to do to drive the amp using my modern day transceiver
(i.e. IC-765) ? Or can I easily bypass the 8122(s)?

My rigs has a minimum of 9 watts out, ideally I would like to drive the amp
with say 30 watts to get 1.5 kW out.

5271. Allied 10 in 1 kit?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-15 00:00:00 UTC
From: Bob Miller <bmiller@calweb.com>
Message-ID: <35AD91EC.B7492FC@calweb.com>
Source record: 102312

Well fellow almost Geezers,

Put on your beenie copters and think back to the middle 1950s. You are perhaps 10 years old or younger and you live in a backwash town like Eureka, California where dial telephones would not appear until around 1953 and television on a daily basis was still a couple years off. Two peanut whistle AM radio stations are the only civilian radio entertainment during the daylight hours and most of the music was paleolithic Hillbilly.
Imagine your quest to have a radio to listen to when the local stations went off the air at 10 o'clock and the Philmore crystal set will just not pull in KGO. To add to this dilemma the cost of a 35Z5 and a 50L6 to get your Wards Airline AC/DC back in operation is just not in the short or long term financial scheme of things given the austere condition of the family fortune. Let me assure you that this is a crisis in any lad's life who is hungry for the entertainment and thrill of radio reception.
The lawn mowing business was never that lucrative in Eureka so you take up shining shoes in the local skid row bars on weekends with the goal of getting enough money together to order the Allied Radio 10 in 1 kit--a dream to be experienced and it came with a REAL microphone that could be used to transmit YOUR own voice to a nearby radio. Now is that not a thrill to behold for a young fellow who's total inspiration to date was a crummy Philmore crystal set and a pile of crap that didn't even come close to resembling the tidy 1 tube receiver outlined in the Cub Scout Handbook(s).
On Christmas eve I opened the box from Allied radio. (Famly economics made it necessary for any kid who no longer sat on Santa's lab to cough up at least half the price of the christmas gift with a fairly severe cap on the matching funds). The product of scores of shined shoes and Humboldt Standard newspapers was at last in my hands. But folks this box of junk was such a disappointment. The long awaited REAL microphone was a cheap piece of crap stamped from recycled coffee can tin and the microphone element itself was a combination of rice paper, tin foil, and what was probably carbon crumbs for a corroded NR 6 Cell. It never worked.
The rest the kit was probably satisfactory, but not having grasped the concept of soldering with a hot iron nor having such a device, the so-called liquid solder glue was used to assemble the three tube amplifier. All I can remember is the trouble I had trying to mount the crummy cheap phenolic paper wafer octal sockets to the red stained 1/4 inch plywood board with the supplied tapered shank wood screws. I can recall punching holes in various fingers during each socket mounting exercise. I rarely cried as a boy, but this project was my trail of

tears and also a source of numerous electrical shocks from the post construction testing. I really cant recall making anything in the Allied Radio 10 in 1 kit work and most of that was obviously my fault for not knowing enough about electrical things to even make a flash light bulb light let alone understand a triode load line and SOLDERING.
But the object of this long rant is to ask the really big question.
Does anyone out there have an Allied 10 in 1 kit in any shape of form.
I am doing some basic research to see how well my recollection of past experiences in our hobby line up with the reality of that piece of crap I squandered my hard earned cash on those many years ago.
So all you boomers out there and even those like me who are neither boomer nor war baby nor depression depraved, tell me how you made out with Allied's educational kits of the early 50's?
Thanks for the read

>I can't find a cross reference that tells me anything like that
> Bob K2LGO

The last number in CRT type designations indicates the phosphor used
in the screen. The tubes are otherwise the same. P1 phosphor is
the usual oscilloscope green stuff, medium persistence (which means the
trace disappears almost immediately after the spot moves away). P7
is a yellow, longer persistence phosphor -- the stuff used on a lot
of radar displays. You could use the 5UP1 in the panadaptor, but
the trace wouldn't last as long, and the panadaptor is designed with
the longer persistence in mind.

Unit of Model ARA Aircraft Radio Equipment.Navy Department.Looks like an ARC 5.Frequency Range 6-9.1 mc.Modified for 12 volt filament operation. It works.I also have a home brew power supply built on a dynamotor base that will fit on the back of the unit.I also have an ear phone with transformer which can be mounted on the top/front of the unit.
I also have a R-26/ARC-5,Radio Receiver BC 454-B.12V filament mod.Dynamotor mounting studs removed but power connector OK.Frequency range 3-6 mc.It works.

Will sell all for $50.00 plus shipping. M.J.Pollock,mpollock@eoni.com

Hello To All:

I replied to KH2PZ's Email to me with his response to my query, but wanted to thank him here, too.

Perhaps we can get a rec.radio.amateur.history category started? No swap ads allowed? I'd love it, myself!

Thanks Jeff and to all who commented.

Hi Bob,

I too have been looking for the bigger ones, in my case I am looking
for a 1000T. Not for display, for an amplifier, so it has to have a
good filament and some semblance of vacuum left in it. Anyone out there
know where I can find either a 750TL or a 1000T?

73,
Don, W6JL

5290. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-16 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6ollgh$kab@news.Hawaii.Edu>
Source record: 102236
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.antenna

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

From: EC Therapy <docshok@sunlink.net>
Message-ID: <35AD918A.4BBA@sunlink.net>
Source record: 102316

I have two Westrex 9B2 rigs, and one has to go.

These were in use in a MARS station, and have seen hard use. I would give the exterior a 7, but the internal/operation a 10. Range of operation is 80 meters through 12 meters(AM/SSB/RTTY< FAX) , but I have used in on 10 with no problems. My rig has been in operation about 3 months or so, and it took me about a year to restore it.

This transciever is in need of three 6146a in the final, and crystal ovens/ crystals for operating frequencies. Physical size... hmmm.. about the size of a large 1970's microwave, and about 80 or so pounds. I think it might need to be shipped in two seperate boxes... the power supply slides out in a drawer configuration.

OK... $100 bucks plus shipping from 17815 takes it. Any takers?

Paul

I've heard a lot of tales about people "getting back on the air"
immediately after WWII, using all manner of military equipment to hand,
in all sorts of countries, definitely before licences were restored.
I've heard tales of several early G3's who had fictitious callsigns for
a while before getting real ones. I believe Harry's statement that there
used to be a lot of this sort of thing going on, not just the well known
illegal CB period.

Didn't Biggs escape from jail?

Cheers,
David GM4ZNX

(As a youngster, I played with big loops and mag field coupling of
actual audio with a friend who was a speleo-nutter)

Hey,
I'm not laughing.
I've got one and it works well.
However, Gonset made several models.
To see if I can help, I gotta know da model......

I have an NCR 12 volt 70 amp power supply I wish to trade straight up
for a working older 386 or 486 laptop computer preferably with at
least a 14,400 modem in it. Supply is a monster but works wonderfully.
Has adjustable over voltage. over current protection. I believe also
the voltage can be adjusted up to 24 VDC but would have to check on
that to be sure. Let me know what you have.

Large Tuning Capacitor Johnson. 1/4"spacing
13.5" long X 4.25 wide X 4" high and it has 2 sections. This should
make the ultimate tuner or for amp. It's in excellent condition $125
Also I have 8 Vaccuum fixed Caps in the 50pF 30KV range. Eimacs and
Jennings. All checked out $50 Each
Also still have five BRAND NEW sealed in the boxes 600 Ohm Glowbars
Very high current. Great for Rhombics $25 each
73 Chris

5319. WTB Modulation Transformer to make an 803 happy

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-17 00:00:00 UTC
From: mjsilva@ix.netcom.com
Message-ID: <6ooeeq$ia3@sjx-ixn11.ix.netcom.com>
Source record: 102185

Hi all,

Well, as I'm finally collecting parts for the 803 transmitter I've thought about building for many years I'm starting to think I'd like to put it on AM as well as CW. I don't normally get on AM but I think I'd have lots of fun with this rig. So, I'm looking for a modulation transformer that could handle a pair of P-P 1625s at full output, i.e. in the 75-100 Watt range. Any out there, and if so should I sit down before I hear the price?

BTW, I'd also want to find a driver transformer (AB2) for the 1625s.

Thanks,

73,
Mike, KK6GM

Having "some of each" all I can say is that you are asking a question
like: "How do Mexican Huaraches (shoes made from cutting a "sole" from a
worn out tire and strapping it to the feet by putting a loop of twisted
packing twine up thru the sole to loop around your big toe.) compare
to riding around in an air conditioned Rolls-Royce. My Harris sets can
pick up a signal that is 20db below the NOISE LEVEL on my $4500 Kenwood,
separate it out from the megawatt AM Commercial foreigh broadcast stations
which are BROADcasting 5kHz on either side of it, and give me a signal
that sounds like I had a 20 ft length of coax connecting me to their
antenna and give me, within 1/4 db, the same audio volume out, while
the signal comes and fades 15 "S" units. They will remember just how
you like a signal to be, how conditions are on a per band basis, how
to get rid of the typical interfering noise, both yours (local) and
theirs (per band and antenna direction), and turn on all set up for
the above on a per freq/band/time of day basis. Not only that, you
can get a good one (Harris Reciever, Preselector, Exciter, post filter,
1.5 KW Amplifier, Auto Antenna Tuner, Antenna, and 110/220 Power Supply
for less than a good Kenwood.

ALL the above and the Harris sets are built to be put in a military
6X6 Truck and carted around at 45 MPH off road in any weather and when
they come up they will be within 1/32 of a HZ MAX off from WWV and will
work.

That's only my observation and all of my 2 cents worth.

Fair Radio and Toronto Surplus and Mike Murphey all have this stuff
for sale. Manauals and parts are always avail from Harris, Collins,
Trans World, RACAL and etc..

Hello,

Anyone interested in a Plessy QDA 3252\A crystal controlled transmitter?
This is a valve Tx with crystals for 145.8, 145.3 and 144.7 several octal
bottles with a QQV07-40 PA (CV2666).

Included is a modulator with 2 off 811 valves in the o/p stage.

The power unit for both of the above has 4 off 5Z3 rectifiers, large
tranformer choke smoothed and paper type capacitors (condensers).

The three units are rack type panels housed in a rack 21"W 33"H 12"D
(guestimated weight 150lb).

It is believed that this unit delivers 100Watts with 100% mod.

E&OE

This is a silent key clearance, best genuine offer secures with payment to
the British Heart Foundation.

This unit will be available for collection in the North London area.

All genuine offers considered - if no takers, it will be skipped.

If you have lots of money and absolutely nothing better (operative word here is "better) to do with it, buy the MIL stuff. I have both and I can tell you simply that, with rare..extremely rare occasion, the MIL stuff is justifiable from an operational/specification standpoint. I'm also assuming that your talking about a home-installation type environment. If, however, you're planning a deployment to some "hot" area, then by all means consider the MIL equipment. Finally, beware of repair costs. In many cases, if it breaks you can't even begin to afford replacement parts, let alone the depot support required for some of it. Its all in what toys you want to have! That's my 2-cents worth.

5338. EIMAC TUBES For Trade

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-17 00:00:00 UTC
From: jsbasb@aol.com
Message-ID: <1998071702592000.WAA13205@ladder03.news.aol.com>
Source record: 102250

I have several Eimac tubes that I would prefer to work out some kind of trade on. There are six Eimac 7034 / 4X150A tubes, two Eimac 4CX250BC tubes, and one Eimac 4CX250B tube. I also have one RCA 4657 tube, and one RCA 829B tube. These tubes are all apparently used (no boxes), and hopefully good, but I have no way to test them. However , other (receiving) tubes obtained from the same source have all tested good. I am looking for Hickok CARDMATIC tube testers, Cardmatic tube cards, blank cards, card punch, etc. Also I have been looking for a Rider's (radio) Manual # 23. Any interest out there ? Thanks.

5342. Re: Allied 10 in 1 kit?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-17 00:00:00 UTC
From: wb9gkz@aol.com
Message-ID: <1998071712065900.IAA07809@ladder01.news.aol.com>
Source record: 102254

Bob,

What a sad, sad story! MY story is a bit
brighter.

I was given a Knight 17-in-1 kit (I think
that's what it was) by Santa when I was in
Sixth Grade. It was a one-tube job with
Selenium rectifier. I made the one-tube
reciever first - - it worked pretty respectable
and I could pick up all of the local
stations...grew up in Milwaukee, Wisconsin.
I mastered the art of regeneration control
and the magic of hand capacity!

I remember next assembling the AM
Broadcaster (transmitter). My long
awaited boyhood dream was to broadcast
to the neighborhood. The sweet smell of
rosin filled my bedroom as I soldered
(yes, Santa was kind enough to include
the Knight-Kit soldering kit...40-watt
pencil, rosin-core solder, long-nose
pliers) the transmitter together.

The microphone with the kit was also
carbon. I attached it to the Fahnestock
clips on the cheesy Masonite board
base. I plugged her in and attached
the 10-foot "long-wire" antenna.
Screaming into the mike, I could
be heard about 5 feet away with this
modulated oscillator wonder on the old
Philco table radio. I soon disregarded
Knight's FCC warning that the antenna
be no longer than 10-feet. I bought
a spool of bell wire at Sears (65 feet)
and ran it out of my second floor window.
Spending years studying the BOYS
BOOK OF RADIO...I knew how important
a good ground was. I attached a ground
wire to the screw of my bedroom AC
wall outlet. The Knight-Kit was now a
Powerhouse!

I remember playing records on the air
by taping the carbon mike to the front
panel speaker of the Audition phonograph.
Tommy James, The Monkees, Cream...
they were all part of my crazed broadcast
format only a 12-year old could love.

I went on to other great achievements with
the Kit. My triumph was in building the
Sound Activated Lamp Flasher. The
#47 light bulb would flash to the amplitude
of sound introduced into the carbon mike.
The Iron Butterfly's infamous "Inna-
godda-da-vida" drum solo was just
the perfect music to demonstrate the
flasher's psychodelic effect. However,
to get the full effect of the pathetically
weak #47 lamp, one must turn off all the
lights in the room. My friends were amazed
at the flasher. We wore out the grooves
on the record as we were visually
intoxicated by the dancing lamp and the
Iron Butterfly's beat! It was so very 60's.

If only the designers at Allied Radio
knew.

From: Steve Robertson <stephen.h.robertson@cpmx.saic.com>
Message-ID: <35AF4DB5.72C6@cpmx.saic.com>
Source record: 102257

I need two 6ME5 miniature eye tubes. These were used in several Heath tuners in the early '60s. I don't see these offered by the usual sources, so they may be pretty hard to come by. Or maybe I have the number wrong (mine were both busted, so I had to piece the glass shards together to read the tube type and, no, I don't have a manual) or maybe it crosses to something else. These have a 7-pin miniature base. The broken ones I have were made in Japen.

Thanks so much for your help!

The Dow-Key realy can't can't true QSK.
You'll need an electronic t/r relay using tubes or pin diodes.
Or, you can build a "bug-box" t/r relay using a Vacuum relay.
Schematics for both types are in older Handbooks, etc.

I built a "bug-box" t/r relay some years ago using a Jennings
vacuum relay which can handle legal limit power switching
as fast as 10 milliseconds - easily good for 40 WPM cw.

You could do what I did 20 years ago-- I got a wooden spool, and wound
it with about a foot of bell wire, and soldered it in place!

The number of turns isn't critical; it just helps with the antenna
loading. From what I can remember, I think it was 10 turns, 1.5"
in diameter (fairly close to a wooden spool . .)

Pat,

I wonder how many others had the same experiences? My all in one kit was from Lafayette Electronics and my father and I managed to get the transmitting range up to about 1,000 feet as measured from our family car's AM radio. :) Some of my favorite memories are lying in bed at night using a crystal radio I bought for $1.00 on the Atlantic City boardwalk and listening to WRCV (now KYW, Philadelphia) playing an oldies swing music format. It was the only station I could pick up with the built in antenna and my very poor ground system. I recently saw the very same crystal radio at auction on E-BAY and was very tempted to bid on it.

Also,

Is someone still issuing WPE SWL calls, or is yours an original PopTronics issue? I have a collection of PopTronics going back to 1956. Do you remember the Carl and Jerry adventures?

Cross-posted to: rec.antiques.radio+phono,rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.misc

I have a very nice condition 1933 Hammarlund Comet
WITH THE COMPLETE PLUG-IN COIL SET IN ITS BOX
and an original manual.
It looks like a T/R switch has been added
(neatly), but I'm not an expert on these sets.
Very clean paint with few flaws.
Was kept in a house.
Looks like you could recap it and turn it on.

Will trade for good-condition
rare "ARC-5" type Command sets, like:
AN/ARC-5 T-15 transmitter, covering 500-1300 KC.
AN/ARC-5 T-89 transmitter, coving 100-125 MC.
AN/ARC-5 T-90 transmitter, covering 125-150 MC.
AN/ARC-5 R-112 receiver covering 100-125 MC.
AN/ARC-5 R-113 receiver covering 125-150 MC.
8th-Air Force modified BC-455 (20-48 MC).
RAT and RAV receivers and/or groups of accessories.
Sets factory-marked in Cyrillic (Russian).
Authenticatable factory prototypes.
Others considered.
Trade depends on rarity and condition.
(Not interested in T-23 or R-28).

I already own multiples of more "common" sets
and have no interest in large lots of them.

The radio and/or coils are absolutely
not for cash sale
and offers to buy for cash will be
deleted without response.

I am not interested in trading for
anything other then that listed above.
Offers of other trades will be
deleted without response.

I was at a fest this morning and bought a diathermy machine (United Diathermy, INC) as a curiosity. Can anyone tell me what this process was supposed to do, and how long these machines were manufactued? It is a nice conversation piece, but looks a little frightening!

They are indeed pin to pin compatible. They were also recommended for the Kenwoods at the time, TS-900s and TS-520s.

Where did you pick up a Racal unit? This some the best equipment
that the Armed Forces use. See a lot of it in AF operations.

Paul,
I am dealing from memory from the sixties, so don't put too much stock in details, but the diathermy machines (some were shortwave, something like 27 mhz, and some were higher freq later) were designed to provide heat for sore muscles, etc, by using rf to heat moisture in the tissues. I'm not a doctor, so that might not be really medically correct, but close, hi hi. I repaired them then, and they were nice transmitters focused into the "antenna" on the end of that "frightening" arm. Could get nasty rf burns when careless!! As I remember, the older ones used 813's in final. Be VERY careful if you fire it up. Can damage humans like microwave ovens do if careless.
73,
Don

Somebody posted here about a month ago looking for a 5BP4
CRT to restore a 40's vintage Television. I've got one.
Please send me some e-mail and we cna discuss it.

Reasonable price, but I'm going to want a picture of the
TV when you get it working. :-)

Jeff

Wanted: 3RP7 CRT.
Looks just like the 3RP1 green phosphor, but
has the yellow trail long persist used in
slow sweep applications. I.e., panadaptors.

I have a 3FP7 but they are not the same.
The 3FP7 has an anode connection for 4KV
and I suspect went into a more expensive
piece of gear. (Military or commercial).

Willing to trade straight across if you
need it.

I have a few 5" CRT's that I do not need that I accquired in a
deal for one that I *did* need.

2 each 5CP1. twin aquadag coating, side anode.
1 each 5NP1. A few pins on the base are broken, but if you
really really need this...

Very reasonable price. $20 includes shipping cont. US.

Jeff

PS, if you know off hand what equipment used these, or the
C or N prefix meant, please let me know. Thanks.

Paul,

They still use this methodology except that now it is simply based on ultrasound. It is used to get heet deep into the musculature to help heal injuries.

Bob

P.S. I have had it done in the relatively recent past due to an automobile accident. I really did appreciate it too!

Hi folks,
Family time is more important than ham radio time. I'm cleaning
the shack and down sizing some equipment that I wont be using.
Please email with questions. Terms are check or
money order. Prices dont include shipping. I can ship by what
ever means you like. Net references available.

1. Kenwood TH75A SOLD

2. Kenwood TR2600 SOLD

3. Kenwood TR-7850 2M mobile rig. 40W output. 14 memories.
LED frequency readout and direct frequency entry via keypad.
Includes mic, mobile bracket, power cord, radio, and original
kenwood manual. No pl (can be added though) and very heavily
built. Used mobile but cosmetics ok. $125 + shipping

4. Heathkit Coax Switch (unbuilt, new in box) SOLD

5. Icom HF solid-state transceiver station including:
Icom 701, PS701 and SM-8 desk microphone. This is a 100W
DIGITAL all solid state HF rig covering 160 thru 10 meters
(excludes WARC bands). Radio covers USB/LSB/CW/CW-N/RTTY and
red LED digital frequency readout.
Has speech compressor, cw-narrow filter,
vox capability. Microphone is a condenser "gooseneck" type
with PTT button on the base. Power supply matches the radio
cosmetically. It is a 13.8V at 20 amps. Power supply also
has big speaker in it, to be used as external station speaker.
Entire setup is very clean--a few minor scratches, but front
panel is perfect. I have the original manual too. This would
make a great setup from Tech plus thru Extra. The rig works
great on SSB with the speech compression, as well as on CW with
the narrow CW filter. The bands are coming back NOW.
Dont miss the action, especially on 10M and 15M!
Entire station (wont split) $425 + 1/2 shipping.

6. Regency CB converted to 10M SSB. Radio runs 15W output PEP
and covers AM and USB. Freq coverage is 28.5-28.8 Mhz, the
phone portion of 10M. Great for mobile/backpacking. Good
condition. Includes manual, sams photofact, mic, power cord,
and radio. $65 + shipping

7. ECI Fleet Courier 30B 10M/6M AM transceiver.
Cosmetically a beauty.
Electrically a beauty. This is a classic early 1960's tube
"mobile/base" AM HF transceiver. Six crystal-controlled
channels.
Chromed cabinet. Blue front panel with white lettering.
Good cabinet and front panel. Output is 15 watts AM.
Includes microphone, AC power cord, and DC-DC convertor.
This is a classic
in very nice condition. Thought it was sold before, but buye
never sent payment. Includes 1 set of
crystals (26.1, I think) Asking $45 + shipping.

8. Kenwood AT-120 mobile antenna tuner. Matches the Kenwood
TS-50 in size. Originally for use with Kenwood TS-120 HF
transceiver.
Covers 80 thru 10 meters. Includes lighted VSWR meter, as well
as tuner bypass position. Single coax in and coax out
connections.
Very clean -- works well. Also very close in size to Icom 706
and Alinco DX70 mini HF transceivers. $100 + shipping

9. Heathkit SB102 SOLD

10. Vibroplex #6 "lightning bug" key -- late 1930's vintage with
Japanned base (no gold trim). Keyer is fully functional but
is missing both the original dit arm weight and the vibroplex name
plate. Homebrew dit arm is included. This is a nice bug --
took it in on trade, but decided that I like the auto-keyer
since I get "glass arm" sending with a bug. This one is
probably not collector quality, but works great with my S-line and
gold dust twins. $80 + shipping

11. Collins Winged PM-2 mobile power supply SOLD
11b. Collins Winged KWM-2A S/N 325. SOLD

12. Alinco DR-110T 2 meter SOLD

13. Desk amplified Microphones SOLD

I'm located in Portland, Oregon.
No LIDS, No KIDS, No SPACE CADETS. NO BAD NEWS either.
Happy to discuss details via email or can call you.
Mailto:K7JOE@yahoo.com
thanks,
Joe

I have an HQ180 that likes to drift. I have changed all the tubes and it still drifts. What can I check to stop this.
Problem #2 For some reason up around 9.5Mhz - 30 Mhz ever so often when tuning a loud crackly noise that nearly pins the S-Meter occurs, The tuning cap is clean plus when I use the bandspread as a work around no funky noises. I don't know how to explain this any better it is like a low frequency oscillation sound, you tune it in and it reads 15 over S-9...Help please this is annoying.
\

Pete et al,
Can't argue about the stability and ruggedness of the commercial equipment. I've used Harris, Racal, Rockwell Collins, Sunair, Mackay, and others, and they're generally a few cuts above the ham gear in quite a few areas. Except one. The user interface. In my experience the commercial equipment, with few exceptions, makes lousy ham gear from an operator's point of view. Or at least from *this* operator's point of view. If you want to park yourself on one frequency and one mode then the commercial stuff is fine, but if you want to tune around the band, or jump from band to band, the Kenwood or Icom or Yaesu or TenTec is going to be a lot more enjoyable to use. Commercial gear is often built with fixed frequency (channelized) operation in mind, not tuning around and causal listening. Some of these rigs don't have VFO knobs, just keypads or freq. up/down switches. Also, while selectivity is good in the commercial stuff, there are seldom any bells and whistles available (notch filter, passband tuning, IF shift, etc) to reduce adjacent interference. That's because for most commercial users, the frequencies being used are "theirs" and there isn't much of a problem with someone parking themselves 1 kHz away and calling CQ or whatever.
As far as sensitivity and adjacent strong signal handling are concerned, comparing commercial gear to ham gear is not apples to apples if you have a preselector in front of the commercial radio. Preselectors cover a multitude of sins. But generally it's true that the commercial stuff has better filtering in the front end.
I have nothing against commercial gear, but I've owned it and used it, and would rather use my Kenwood 850 ANY day. The 850 (with the preamp off) has a nearly "crunch-proof" receiver, and will transmit at a 100% duty cycle, just like the commercial rigs. But it has a lot of creature comforts they don't have, and is much more enjoyable to use for casual operating, chasing DX, or contesting. It even has halfway decent QSK, something you won't find in any of the commercial stuff.
No doubt there are others who prefer the user interface of the commercial radios, but for the kind of operating I do it drives me

nuts.
73,
Doug, KF4KL

5389. FS - Drake AUX-7 with new modules

Newsgroup: rec.radio.amateur.boatanchors

5391. WTB: Drake C4 Console Parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-18 00:00:00 UTC
From: wabate@erols.com
Message-ID: <35b01deb.23870273@news.erols.com>
Source record: 102207

I have just purchased a Drake C4 console. Its in decent condition but is missing the remote antenna switch and the power master box with the contactor and outlets.

I can probably make up a power master that will do the job and look close to original, but the remote antenna switch would be tougher. Anybody have these parts that they would like to trade or sell?

Thanks,

Bill Abate

5392. History Tidbits, 1916-1917

- The lastest baseball scores were transmitted nightly by ham radio
(QST, May 1916)

__ __
- The end-of-message signal, AR, is nothing but the American Morse FN
(._._._.), meaning "Finished," and the sign-off, SK is simply the
landline 30 (..._._), which meant half-past the hour, and thus, the
end of the operator's shift. (July 1917)

- Postcard acknowledgements, forerunner of the ever-popular QSL card, were
suggested to be sent when amateurs hear a distant station (June 1916)

- But amateurs were slow to answer cards received, then as now (Feb 1917)

- An amateur worked a military airplane over distances up to 114 miles
(Sept. 1916)

- Car generators were suggested as a source of power for portable
spark stations (Oct 1916)

- A Cuban amateur was ready to get on the air; soon amateurs would be
enjoying truly international radio QSOs (Oct. 1916)

- A tube transmitter and receiver were demonstrated to the public by
amateurs at the Iowa State Fair (Oct 1916)

- The Wouff Hong, the Rettysnitch, and the Uggerumph, all instruments
of torture to help insure good operating practices, were revealed
to eager amateurs by The Old Man in his fabulous story, "Rotten
QRM" (Jan. 1917)

- A correspondent commented on how long it took amateurs to say goodbye
(March 1917)

- A League member proposed higher technical standards, harder license
examinations, and 12 wpm instead of 5 wpm (March 1917)

Jeff KH2PZ

5393. power supply for zenith transoceanic h-500 - 600 series

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-18 00:00:00 UTC
From: dpe6@aol.com
Message-ID: <1998071804151000.AAA06977@ladder03.news.aol.com>
Source record: 102209

I just got done reading about the power supply requiremnets of these fine old radios (that is, the kind of batteries that they require that just so happennot to be manufactured anymore). AI was just wondering if there happened to be a d.c. converter that one could buy that plugs into the wall or if they, the radios, came with a power transformer built -in.

Finally, if there are no d.c. converters on the market, are there any readers out there who have any suggestions as to what should be the best possible way to get around this battery problem.

5394. POWER SUPPLY FOR TRANSOCEANIC 500 AND 600 SERIES

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-18 00:00:00 UTC
From: dpe6@aol.com
Message-ID: <1998071804312400.AAA26788@ladder01.news.aol.com>
Source record: 102210

I need information from anybody who is in the know about power supplies via d.c. converters and alternate battery supplies for zenith transoceanic 500 and 600 series radios. From what I understand the original power supplies are no longer available and the substitutes are expensive and not really the proper sources of power.

Of all the owners of these great radios there must have been some ingenious ways of gettting around this problem. Being able to plug the set into the wall would be the optimal solution. I don't know though. Do they even have power transformers built into them for this purpose?

[deletions]

Jeff, your posting looks very much like material contained in ARRL's "Fifty Years of ARRL" article series (1964 QSTs), which later appeared in the *Fifty Years of ARRL* book. If so, please credit it properly. Also if so, it would be more enlightening for readers of your post to understand that the month/year tags indicate *the QST issue* in which the item appeared.

I sure would like to find a Heathkint MM-1 multimeter circa 1955, about the size of a Simpson or Triplett, but more squarish. Need one for a photo I am trying to comlete of my original ham station circa 1960 which included an R105/ARR-15, A black command set transmitter, a home brew power supply plate modulator and a pile of haywire to make any OSHA inspector drool with visions of citations in the hundreds. I've managed to round up everything but the MM-1. Will trade a working Simpson 260 or buy or what ever.

Thank you for the read

Hi all;

(This is a resend. Never showed up 1st time I sent it.)

Do not respond to me, I am posting this for a fellow ham (Ken
N5CM).
Reply to Ken directly via e-mail at (N5CM@AOL.COM)..... See Kens msg
below. He is trying to recreate his 1938 ham station and needs your help
finding the article's from QST etc as shown below. Thanks all, I would
love to see Ken get this thing built and on the air. He has been a ham
for 60 years. 73's Bob

Hi Gang,

Does anyone remember a transmitter oscillator circuit that appeared
way back in 1937 or 1938 which the author labeled a "Pull-Pull" circuit?

I thought it was in the Hints & Kinks section of QST but I must be
wrong.
Maybe it was in Radio Craft magazine or other radio publication.

The circuit resembled the "tuned plate-tuned grid" oscillator but, the
grid coil was wound in opposite direction over the plate coil, the
theory
being that any change in the plate circuit would be induced in the grid
circuit in opposite polarity - the two would pull in opposite directions
and
"lock" giving amazing stability.

I can vouch for the stability - without voltage regulation, on 20 meter
CW
I never got less than a T9x report which means pure dc note and the x
meant it sounded like a crystal controlled oscillator.

Also, I am trying to find the article about a two tube regenerative
receiver
described in QST I believe. It used a type 58 regen detector and a
type 56
audio amplifier. It was housed in a "Bud" black crackle finish cabinet.

I would like to build up these two items again as they were my first Ham
Station in the spring of 1938 when I was W5HHA.....

Any help greatly appreciated! 73, Ken.....N5CM.....

Hello,
Picked up an S20R. Looks good and plays ok. A little crackle in the audio. Looks like all original parts. I am debating whether I want to tackle recapping this one. Wondering if there are any places in Canada to have this work done.

Regards,
Chris VE6RDC

Hi, Dave. Wonder which set it is. There were three variations, w/wo AVC,
w/wo crystal filter. I have an AVC model wo the crystal filter.
Unfortunately, don 't have a complete coil set, only coils for 80 meters.
Don't have any of the sets you are interested in trading, either.

Could the circuit be a TNT (Tuned, Not Tuned) transmitter? It appeared in
the1936 ARRL Handbook.

>
>
>Also, I am trying to find the article about a two tube regenerative
>receiver
>described in QST I believe. It used a type 58 regen detector and a

The gent who suggested the TNT has available a nicely made homebrew receiver
using a 58, 57 and 47. It is fully shielded and has a complete set of
coils. Let me know if you would like to contact him and I can get you his
phone number. He is not on Internet.

I was looking at a 1963 issue of QST and saw an ad for a Sonar Monobander.
It was available for all bands 80-10. Anyone ever hear of or have one? I
might be interest in a 75 meter or 40 meter version.

Thanks

I've got a Collins 618T Airborne HF Transceiver. Wonderful device, BUT:

tunes in 1 khz steps - no delta tune
only other user controls are mode & RF gain
horrendously noisy blower
special maint kit required to do any repairs
a LOT of outboard wiring
28 V DC @ 6A & 160W of 115V 400 Hz AC power required just for xcv.

Arthur Collins is reported as having said "Anything used by pilots has to be simple". It's reassuring to know the pilot is flying the aircraft, not messing with radios, but it does restrict the functionality of the equipment.

Although I enjoy using it, I'm glad I have a more conventional xcvr as well.

5441. Heathkit HR-1680 Manual

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-19 00:00:00 UTC
From: jrev@my-dejanews.com
Message-ID: <6orocl$6tn$1@nnrp1.dejanews.com>
Source record: 102158

Anyone have a manual for the Heathkit HR-1680 receiver? Will gladly exchange a couple other boatanchor manuals (copies) for a copy of this one. There used to be a place on the "Portal" service where one could send in a couple boatanchor manuals and get a needed one free. (Copies). It was run by Hams and SWLers on a complete vol. basis. Does it still exist now that the internet has taken over everything and commercialized all the stuff that used to be free?

I know about the sites here on the net that sell copies of the manuals. But $21 is a bit much to pay for 15 or less copied pages. I don't need the building instructions....just the "users" & "specs" parts. Also would like to find the same for the matching transmitter (HTX-1681) though I haven't found a transmitter yet.

Will send a copy of National NC-125 and Hallicrafters SX-110 manuals in exchange. Even if you con't need them perhaps you can use them as "trading stock" or just for interesting reading ;-)

> Doug, KF4KL

Touche!!! I'll agree, for the most part with Doug. My Harris stuff has what I consider to be a superior interface to any Ham rig I've yet seen, though. Keypads, yes, but a "vernier" 1 Hz at a time or 10 or 100 or 1000, etc., shows both freqs of a split, in separate colors and positions, 1000's of memories, all with a dozen or so settable parameters. Yes, for the most part Ham stuff is configured with a Ham user freindly interface. I use my stuff "on location" somewhere on Earth moving every 2 weeks. All climates, all frequencies, wierd antennas, strange power, and etc.. I had my Harris stuff and my Transworld Stuff (suitcase) checked and tuned by the factory after I bought it. Harris stuff cost more to ship than the inspection, repair, tune. Transworld had a $75 minimum "just to set it on the repair counter" (bad news) It cost a total of $75 to get it fully inspected, repaired, tuned and returned. It has worked in 38 countries, desert, jungle, city, outback, spring, summer, winter, and fall. It just always works, AM, CW, SSB (U or L), TTY, Packet, It'll load a paper-clip or a 6 element beam or anything else with some length and some surface area. It'll separate out the signal you want to hear and for the most part if you can hear it you can work it. I rarely use the auto-antenna tuner or the 1KW amplifier. ON THE OTHER HAND: It cost me $230 for 6 connectors (mil spec) to make up

the (what would have been $780) worth of cables to connect the suitcase battery pack/solar/"any" power charger/P.S., the auto antenna tuner, and the 1 KW amp..

Might try International radio. They have a web site. They may have one.
Also you could probably get a outboard dsp unit to do about the same
thing, and have auto-notch etc, to boot. MK

Audio Filter Model FL8B - made during WW2 - this is an LC type in a cast aluminum box that inserts beteen the audio output of the receiver, and the headset. Switch on top of case points to "Range, Voice , Both". It is an effective CW filter, giving about a 300CPS range for listening to CW etc. A lot of hams picked these up surplus after the war. $12.00 plus shipping.

I have the following ARRL Publications for sale or trade.

Radio Amateurs Handbook 1942 Special Defense Edition. Complete in
Good condition. Cover has been retaped from the inside, and the spine
has a few splits. Price: $40

Radio Amateurs Handbook 1943 20th Edition. Fair/Poor condition.
Cover has been retaped from the inside, and has a few tears at bottom.
Well read, but complete and inside pages are good. Price: $10

Radio Amateur's Handbook 1961 38th Edition. Fair/Poor condition.
Bottom of front cover is torn A(about 1/2") and same bottom corner is
torn from the first 15 pages. None of the print is damaged except for
the page numbers. Cover is pulling away from the spine, but
all inside pages are in good shape. Price: $10

ARRL Antenna Book 1956 8th edition Good condition. Price: $5

Buyer to pay shipping on all items. Usualy USPS is cheapest way, but
will ship however you wish.

Um, my TOs have built in AC power supplies. I thought the 500s and 600s did
too. If not an AC power pack for them is a minor design chore and costs about
$20-30 in parts. A battery pack or battery converter is another thing,
though!

I have the complete manuals for the HR-1680 and the HX-1681. In fact
I still use both of them. You should note that the HX-1681 has a
seperate power supply, and hence, a seperate set of manuals, which
I also have. Heck, I still have the original manuals from my
Heath 2er and 6er. If you like, we can get together, off line, and
arrange to get you the copies you need.

Doug,

There are plenty of Drake experts on this newsgroup, but the sensitivity problem is probably resulting from using the T4XC as the primay control VFO. I also had this problem with my 4 line years ago and if I remember right, alignment of the mixer stage and a replacement of the interconnecting cables from transmitter to receiver cured it. I used cables made from RG174.

Good Luck

Hmmm...

I have a Transoceanic model B-600, and it plugs into the wall. The cord
is on a spring-loaded reel, and there is a place recessed into the right
side of the cabinet for the plug to hide. The set also runs on batteries
(that haven't been available in ages). Which model 600s are you talking
about that don't have a built-in power supply? Are you perhaps referring
to a later solid-state model?

5469. HELP: Tempo One losing mic audio on SSB

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-20 00:00:00 UTC
From: k5dh@rtis.ray.com
Message-ID: <6ovv79$56e@sf18.dseg.ti.com>
Source record: 102037
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I'm trying to repair a Tempo One HF rig. It works fine for the first 10 to 15 minutes after startup, but after it warms up, it loses mic audion on SSB. Listening on another receiver, you can faintly hear some audio if you SCREAM into the mic. The carrier is quite loud, as I would expect (even though it is correctly nulled, there is still more than sufficient carrier leakage to be heard on a receiver a few inches away!). I've checked the tubes, and all test good (all the ones that might have something to do with SSB generation, audion, transmitter, etc). There are no burnt parts or damaged wiring. Anyone have any ideas on why the mic audio is going away? Obviously it's a heat-related issue.

Dean - K5DH

You're correct, Dave. I have access to the complete collection of QST;
I use "Fifty Years" as an index, then read the actual articles as they
appeared in their original form.

As soon as the complete microfiche collection is available I'll be
the first to purchase a set. Well worth the price. I know of no other
source that contains a monthly account of our 80+ years of radio
history.

I will properly credit "Fifty Years" in the future.

5478. National HRO 500

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-20 00:00:00 UTC
From: Marvin Born <Mborn@wbns.com>
Message-ID: <35B3EE1E.30FA@wbns.com>
Source record: 102046

I recently purchsed a HRO 500. 102 series. It has a built in speaker on the right rear side panel. It exactly matched the paint and has matching hardware to the other screws and nuts in the radio. The hole has been machined and the grill is extruded. Even the aging of the hardware matches the other hardware in the radio.

Does anyone know if National ever installed speakers in the HRO 500 at the factory ? If so does anyone have any details?

73, KF8XU

I received mine the same way. The portable version came with a built-in
speaker, rechargable battery power and carrying case.

No, not more than we wanted to know!

As a kid, I was into hamming and building radios from 1939 on, but much of your post I didn't know, and a lot that I did know, I had forgotten. Thanks for taking us all back nearly sixty years. It's been a great hobby for me....wonder what folks will say sixty years hence????

Source record: 102105

1978 Tram D-201A, with manual, original D-104 mic. Bought from original owner, excellent condition, a bit of "rubbing" around a couple of the tuning knobs, but very clean. Includes BK Precision/Dynascan model 1801 professional frequency counter. Range expanded slightly from original 40 channels, with VFO.

Very nice late 70's package, sold complete only. $425 plus exact cost of shipping/insurance. E-mail for more info.

Ed

Anyone have any information on V-M Corporation of Benton
Harbor, Michigan? Their trademark is
"The Voice of Music".

Have two VM-1432 AM/Shortwave tuners. These are tubed,
have frequency coverage similar to (but not identical)
to Heath GR-54. No audio power amp on board, just two
mono line outputs, A and B.

One works pretty well, just wonder if there is a V-M/Heathkit
connection.

5485. Drake T4XC locks up in transmit

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-20 00:00:00 UTC
From: kf4kl@ipass.net
Message-ID: <35b3a109.98200453@DOUGHALL>
Source record: 102109

Hi folks,
I picked up a T4XC/R4C this weekend, and have really been enjoying it. After some use, however, it appears that the transmitter has a bit of a problem. After I have been transmitting for a while the rigs locks up in transmit. Happens with SSB or CW. I can continue to use it, ie. I can still key it on CW or talk into the mic on SSB but the TX relay never drops out.
There appears to be another problem relating to the use of the R4C. When I turn on the T4XC the S-meter on the R4C drops considerably. I can't tell if the sensitivity is actually lower or if the S-meter is just reading lower.
If you've seen this before I'd appreciate any hints. I haven't opened up the transmitter yet, but plan to do so this week and check all the tubes, etc.
73,
Doug, KF4KL

Hamfest - Gaithersburg, MD - September 13

FARFest '98, the *last* Gaithersburg Hamfest, will be held
on Sunday, September 13, 1998 at the Montgomery County
Fairgrounds in Gaithersburg, Maryland.

Gates open at 6:00 am.

Take I-270 to exit 11 northwest of Washington, DC. Follow
the signs to the Fairgrounds (Montgomery County Agricultural
Center).

Talk-in on 146.955(-) MHz.

Special event station W3PRL-AM (Rock XV) on 3885 and 7290 kHz.

Admission $5. Tailgating $15.

All proceeds go toward the support and administration of the
57+ educational scholarships that are funded and supported
by the Foundation for Amateur Radio (FAR).

For more info, contact:

Al Brown (KZ3AB) at 301-490-3188, or
Mary Morris (N4TCI) at 703-971-3905, or
e-mail at Amateur_Radio@hotmail.com

In 1999, FARFest is moving to Bowie, Maryland.

5490. Western Union Model 21A ticker printer

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-20 00:00:00 UTC
From: - <jsee@idt.com>
Message-ID: <6oubim$ol9@nnrp3.farm.idt.net>
Source record: 102114

Remember the old Western Union telegrams that had the message
typed on a 1/4 inch wide gummed paper tape, pasted onto the
telegram form?

This is the printer that did it...

WESTERN UNION Model 21A printer, s/n 2490

mfgd. by Morkrum-Kleinschmidt Co.

5-bit (baudot) parallel input coils + the print coil;
set the 5 parallel bits, then slam the print solenoid and the
character gets printed on the tape.

Used (of course) but appears to be essentially complete,
except the tape reel cover and End Of Line bulb are missing.

Make offer. You pay shipping, or pickup from Northern NJ.

Jim W2JC

Message-ID: <01bdb390$40934de0$160a5da6@wieder>
Source record: 102117

Please write and let me know why you would like these manuals. I would consider a trade on the off chance you have an original manual for an HQ150 or S85. If we can't do a trade I will sell to a good home for a resonable price.
There is some other neat info that comes with the manuals Thanks. 73
John K0JY jwieder@rmi.net

B&W 5100 original manual. Some handwriting and a few dog ears but overall pretty good shape. Also includes numerous letters from the factory about problems the owner was having with the unit and service notes (15 pages) from the factory.

NC300 original manual. Missing the front cover but otherwise complete. Some handwriting in the manual. A few service bulletins and diagrams plus a letter from Leo Meyerson of WRL (on WRL stationary) regarding a problem with the receiver.

I think that that article would be George Grammer, W1DF, "What About the Simple Receiver?", QST, June 1934, pp 9-13, 82. A condensed version also appeared in at least two subsequent ARRL Handbooks (the 13th--1936--edition for sure) and at least one edition (1937) of "How to Become a Radio Amateur."

I guess it is true that successive generations of Americans are getting "more stupid" and less capable, and therefore need to have things made easier for them. Gee, now the Tech minuses can sport a "class D" license just like the legal CBers used to. What's next, a driver's license with no written or driving test, or maybe a PhD in Theoretical Physics without having to go to college?

Reid, K7YX
Physicist, Engineer, and "Class A" Amateur Radio Operator

I have 8 Vaccuum fixed Caps in the 50pF 30KV range. Eimacs and
Jennings. All checked out $35 Each. These normally sell for over
$200. I still have five BRAND NEW sealed in the boxes 600 Ohm
Glowbars
Very high current. Great for Rhombics $25 each. Trades or Offers????

I'm looking for schematics for a Heath IT-11 Capacitance Checker and
Eico 950 RC Bridge. Calibration/troubleshooting data would be useful,
but definately need schematics. Can anybody help? My ESI 250DA works
fine, but think the others will make troubleshooting quicker.

There is nothing wrong with having strict standards for licensing, but
they should be relevant to the end of the 20th century not the
begining.

Constructors paradise, info
Hi all,
I have received quite a lot of mail recently regarding my TeleNordia homepage with all the circuits, projects and information. It seems that the TeleNordia server is "up and down" like a whore's knickers but unfortunately this is the site that most visitors have bookmarked.
I have got three sites which are all updated together (when they work):

http://user.tninet.se/~acz732k Main site, the unreliable one
http://hem2.passagen.se/sm0vpo This is the most reliable one in Europe
http://members.xoom.com/sm0vpo This site is quite reliable outside Europe

When my subscription to TeleNordia (tninet.se) expires I may not renew it since it is pointless having a site that cannot be relied upon. If you have bookmarked this site then please change your bookmark to 2 or 3 above. I am also working on another replacement site that will give me more server space as well as costing me nothing for the connection.
I have also included a little more information about my BUG kit.
If you have never visited my site then you may be surprised that there is a site with 10 times more projects than links!! There are about 70 projects. Many of them are photographed and some others have PCB foil pattern available for download. In short, it is a constructors paradise and will be continually added to.
Hope that you enjoy it. Best 73s de Harry

I never thought anything on this newsgroup could pull me into getting involved.

I think I speak for MOST of the older hams. We don't care whether you can send SOS on CW. Just learn SOMETHING before you get on the air. I will welcome you into this hobby (code or codeless), if you are able to pass a test on the theory without knowing the answers beforehand. Let's face it.. This VE program along with the Q&A question packages, have gutted this hobby. If you hate the code, but still think an interest in electronics has something to do with what's left of ham radio, join me to make a change in the way these exams are prepared and given.

Thanks

Dan

>This type of attitude is why 95% of the people who were hams as teenagers
never continue. I quit when I got fed up with old timers telling me how lazy
and stupid us kids were. Fire up any HF band and listen to the
conversations...Where are all the members of the "less stupid" generation?
They are on 40m complaining about there back problems, knee problems, rectum
problems, RV problems, or describing the latest Japanese microprocessor
controlled rig they bought. I can have a much more intelligent conversation
with my 5 year old son, and I won't get a lecture about how hard life use to
be in the old days.

Us "stupid" teenagers are now running the new world of electronics, and
generally are NOT hams.

Ham radio competes with the internet, video games, soccer, etc. A hobby
changes with the times, or it dies. For me, it died.

Have about 40 used 6 and 7AH 12 VDC gel cells for sale.
All load tested good. PERFECT for QRP rigs
and portable operation. I have sold hundreds of these to the QRP boy's
on the QRP mailing list and all have been very satisfied. Had a few
damaged in shipping and one came back DOA which I replaced for the
fellow free of charge but that's it. I am the service manager for an
alarm company and we change our customers batteries every 3-4 years as
preventive maintenance. These used cells should provide another 2 to 3
and probably longer service if used and recharged properly. Cells come
fully charged and are ready to go. They can be recharged with a simple
wall wart charger available at Radio Shack or a 1 amp automotive
charger. I guarantee against DOA.
Brands are Yuasa, Interstate, Radionics and Portalac.

6ah cells are $10 shipped CONUS
7ah cells are $12 shipped CONUS

Images of the cells can be seen at:

http://www.usol.com/~tje/yuasa6.jpg Yuasa 6ah
http://www.usol.com/~tje/yuasa7.jpg Yuasa 7ah

I have the following for sale. Tube prices include shipping, other gear/materials do not include shipping. Tubes are used unless indicated. All tubes test good on Hickok 539C. Units for sale until 06/23/98.

Thanks,
Matt Warren

Tubes:
EL34:
3- "Siemens" EL34, all labeled Groove Tubes. These are the dimple top tubes made in E. Germany at a time when there was an E. Germany. New.
1- Mullard EL34. Welded plate, single ring getter.
2- Mullard EL34. NOS. Mullards have holes in guide keys, date codes at base of glass. The real deal.
$110 for all of them shipped.

6L6GC:
6- Sylvania. Two with broken plastic guide key. One is NOS. All test good.
2- GE. Real nice condition.
1- RCA Black Plate.
$120 shipped.

12AX7:
10 Tele 12AX7. Mixture of Tele label and Fisher label. All diamond bottom! $120 shipped.

6DJ8:
1- Mullard.
5- Bugle Boy
$30 shipped.

EF86:
2 Valvo
1 Mullard
$24 shipped.

Vintage Speakers:

University 312. 8 Ohm with built in horn tweeter. Excellent. See pics at http://www.ccinet.com/~phineasgage/temp/univ312a.jpg and http://www.ccinet.com/~phineasgage/temp/univ312b.jpg
$115 + shipping.

Altec 12". 8 Ohm. 4178c. Excellent. See pics at

Source record: 102065

This is real. Just went to arrl web page. All Novices and Tech + to become Generals in essence if this goes through.

ARRL Proposes Simplified Amateur License Structure

The ARRL Board has agreed to propose a simplified Amateur Radio licensing structure with four classes. Lengthy discussion and debate during the Board's meeting July 16-18 led to majority support for a plan for four written examination elements to establish amateurs' operational and technical qualifications instead of the present five, and two Morse code examination elements instead of the present three.

Under the plan adopted by the Board, the entry level to Amateur Radio would be known as Class D and would convey the privileges of the present Technician license. The written examination would be at the same level of difficulty as that of the present Technician examination, but consistent with the privileges of the license. All amateurs now licensed as Technicians would become Class D.

The next step would be known as Class C and would convey the privileges of the present General license, but with phone subbands expanded by 50 kHz on 75 and 15 meters and by 25 kHz on 40 meters. Class C would be the entry level to high frequency (HF) operating privileges. To upgrade from Class D to Class C, an amateur would pass a written examination on the operational and technical qualifications required for HF operation and a 5 word per minute Morse code examination. All amateurs now licensed as General, Technician Plus, and Novice would become Class C. The expansion of the telephony sub-bands would result from "refarming" of the Novice CW bands that are no longer required for their original purpose.

The third step would be known as Class B and would convey the privileges of the
present Advanced license, but with phone
subands expanded by 50 kHz on 75 and 15 meters and by 25 kHz on 40 meters. To
upgrade from Class C to Class B, an amateur
would pass a more advanced written examination similar in difficulty to the
present Element 4A and a 12 word per minute Morse
code examination. All amateurs now licensed as Advanced would become Class B.

The final step would be known as Class A and would convey the full privileges of
the present Amateur Extra Class, with
telephony sub-bands expanded by 50 kHz on 75 and 15 meters and by 25 kHz on 40
meters. To upgrade from Class B to Class A,
an amateur would be required to pass the most difficult written examination in the
sequence. Consistent with the practice in many
other countries, no additional Morse code examination would be required beyond 12
words per minute. All amateurs presently
licensed as Amateur Extra Class would become Class A.

In their discussions, Board members emphasized that the objective is to rationalize and simplify the amateur licensing structure
without reducing the requirements for any class of license. Where reductions in
Morse code requirements are proposed, there
would be a corresponding increase in written examination standards. On the other
hand, Board members were adamant that
simplifying the structure should not come at the expense of privileges already
earned by amateurs. Therefore, present Novice and
Technician Plus licensees, having earned entry-level HF operating privileges,
would be granted the new entry-level HF license.

Adoption of the simplification plan marks the culmination of 30 months of work by
the Board, during which time the input of
literally thousands of ARRL members and other amateurs and prospective amateurs
was considered. The Board debated a wide
variety of options including both smaller and larger numbers of license classes,
higher and lower qualification levels, and different
privileges. Nine of the 15 Directors voted in favor of the plan, with six opposed.

Following the meeting ARRL President Rod
Stafford, W6ROD, observed, "The debate was at times contentious and the result was
not unanimous. Some Board members
preferred greater simplification; others were uncomfortable with some of the
changes being proposed. However, every Board
member, without exception, left the meeting knowing that each of his or her
colleagues did what they believe is best for the future
of Amateur Radio."

Members are urged to contact their ARRL directors to comment on this proposal.
E-mail addresses are on page 10 of any issue of
QST. Members also may comment on the proposal via the ARRLWeb site,
http://www.arrl.org or via e-mail at restrux@arrl.org.

It was the standard model lifeboat radio used on most U.S. flag ships
and a few foreign flag ships.

It puts out about 5 watts on 500khz A2 (tone modulated) CW
and maybe 3 watts on 2182Khz AM 'phone.

It was a common radio - made from about 1955 to 1970, then replaced by
a solid state model with molded plastic case. If I remember right,
your model has around 6 tubes, with a hand crack generator containing
a "vibrating reed" type voltage regulator.

These radios, and the later models are now being removed from ships
since under GMDSS rules, the requirements for a 500Khz watch and
its related equipment, have been discontinued.

I don't consider it to have much value - but then again, perhaps I've
been around them too much......

Mine definately were 6M_5. The third character was the only one I had
trouble making out. At first I thought it was 6M55. Bhen I found some
old Heath material on the web for a different but similar tuner that had
6ME5 eye tubes. However, I wonder if your 6E5M is just a cross to 6ME5.

First thing I'd do is replace all tubular capacitors in the audio chain.
These have a bad habit of going leaky when hot. It's also possible you
have a tube that goes south when hot. This is difficult (impossible) to
find using a tester. Could also be a resistor that goes high or open
when hot. My money's on a cap.

Can you help a New Zealander with questions about a Redifon?

If so, PLEASE e-mail him directly! (DO NOT hit "REPLY" to this article)

You can use his e-mail address that is listed in the following forwarded message:

= = = = = = =

From: "Grindrod, Ross" <GRINDRR@chh.co.nz>
Subject: Your readers may be able to help
Date sent: Wed, 24 Jun 1998

I am looking for parts to restore a Redifon r50m receiver,
These were used on merchant ships after the war
If you can help please contact me at Grindrr@chh.co.nz

My early days were spent listening to #19 sets and 62 sets
now the price is out of my league.

Arc 5 receivers are very popular as is any military set.

Enjoy reading the articles
Thanx Ross

5561. Help!!! Info needed to identify a video glowplug socket.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-22 00:00:00 UTC
From: Gary O'Neil <n3go@us.ibm.com>
Message-ID: <35B6A169.CEEC6007@us.ibm.com>
Source record: 101931

I have what's been a boatanchor (quite literally) for too many
years and the XYL says we need a nightlight to keep the plants company
when we go on vacation :-)

I have a Heathkit GR-2000 with a grossly biodegrated CRT socket.
Not a real problem to fix except I'm unable to find a socket without
identifying it in terms of its base diagram. It was suggested I consult
an old tube manual for the info... That's where you guys/gals come in.

I need to identify the base diagram for a 25DEP22. I'm not sure
whether the tube was made by
Sylvania or RCA, but I think it was probably one of the two. I was told
that it might be a 14BE base, but I have no way of confirming that. If
somebody who knows what socket I need and also happens to have one, I
will be most happy to negotiate a mutually satisfactory exchange.

Many thanks in advance gang.

It operates on 500 Khz, A2 emission, and 8364 Khz, A2 emission.
The receiver is a fixed TRF on 500 Khz and a tunable (over a limited
range) superhet on 8 Mhz. It automatically sends "SOS" and a long dash
and a series of 4 second dashes sequence to trip shipboard autoalarm
receivers on 500 Khz. switches to 8 mhz. and sends "SOS" and a dash
sequence. It can be manually keyed as well with the built in key.
I may still be able to get an instruction book on it.
73,
Sandy W5TVW

Crystals for that rig are FT243 type and in the 8 "MC" (read MHz) range. Frequencies below 8.333 multiply to 2 meters, and above 8.333 multiply to 6 meters. [...thats a rule of thumb; better multiply out the actual numbers to be sure you're in the band or sub-band.]

I owned one of those many moons back, and it did work quite well. Should make a good father-son project alright, but better find a diagram for a roadmap around those circuits.

Good Luck,

Bob, w6lac

From: amfone@concentric.net
Message-ID: <6p3do3qjf1@nnrp1.dejanews.com>
Source record: 102007

Thanks for reading.. Well I waited to long to buy that spare set of Eimac 3-500Z tubes,I always planned on buying... The pair in my L-7 are sill going strong and are 20 years old... but now I hear the Eimac tubes are no longer available.... I called RF parts wanting a pair of matched Amperex tubes and found the price to be $174.00 per tube and the only " matching " they could do was by PRODUCT DATE . SO not really sure that would mean the pair are electrically matched.

RF parts sells a 3-500zg or 3-500z tube they have made for them in China. They warranty the tube for 2 years.. anyone ever use this tube, any good? thanks tim * note RF parts sells two Chinese 3-500 tubes I'm refering to the more expensive ones...
thanks tim wb8uhz

5568. Heathkit SB-610 coil info wanted

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-22 00:00:00 UTC
From: jangus@netcom.com
Message-ID: <jangusEwGzFu.Fn8@netcom.com>
Source record: 102009

Somebody out there has to have a working SB-620 Scanalyzer.
And not just a working one, but one that is set up with the
3.395 MHz IF bandpass filter assembly to connect to some of
the matching heathkit gear.

If you do, could you take a look at the coil assembly?
Part number: 52-101

It should be a coil form with two coils wound on it.
If possible, could you check the dimensions, diameter,
number of turns, spacing etc.?

I'd really appreciate it since I doubt this coil is still
available from Heathkit.

Also, does anyone have a substitute part number for the
3BP7 CRT? Mine is *sooooo* dim, I have to turn out the lights
in the shack to see the trace. (Meanwhiles, I'm using the
green 3BP1 CRT I had as a spare for the monitor scope.)

Or a source for a 3BP7?

Thanks es 73 from Jeff

Dodson,

I checked the ARRL website, and you do have it correct.

As an extra class op since '64, I realize that something must be done, and suppose this plan is as good as any, knowing full well that there will be changes & revisions.

One revision would be mandatory. General class ops who have passed 13 wpm MUST be granted credit for the new 12 wpm test, or "grandfathered" if you will

Also, a general overhaul of the VE system is in order. In years gone by, the form 610 was mailed in before the test, and a sealed envelope with the examinees name on the outside was mailed to the examiner. At the test session, the examiner tore open the envelope, the examinee completed the papers inside, and the examiner resealed the envelope and mailed it in, without grading or comment. Seemed simple to me and relatively cheat-proof. Something like that brought up to date would be a boon to paper-work strangled VEs.

Thanks for bringing this to our attention.

Bob, w6lac

Bob,

As long as the Q&As are published like they are now, it is pure folly
to try and prevent cheating. Anyone can pass a multiple-guess test for
which the answers are published with a very minimal amount of study if
they know how to do it (and it's dead simple, and, no, *I* won't tell
you how it's done) and not have the ability to actually retain or apply
any of the knowledge. The current written tests are a sick joke if you
are looking to screen ops for knowledge of theory and regulations. They
are just a minor hoop to jump through.

73,

Casey

5583. WTB: Manual for SGC-705 HF Transceiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-22 00:00:00 UTC
From: "Kenneth M. Gianino" <ken@hnvr.com>
Message-ID: <35B61E37.14A5@hnvr.com>
Source record: 102024

I'm looking for the operations/service manual for an SGC SG-705 mobile/portable HF transceiver. It's working fine but I would like to change frequencies and must figure out the logic matrix for the transmit low pass filters. It looks similar to the newer SG-715 HF packset (except the 705 is not waterproof).

Copies are OK. Also, I'm willing to swap a service manual for the Transworld TW-100 HF radio.

I agree completely that as long as the questions and answers for the written tests are in the public domain the tests are ineffective.

I really think that they should be removed from the public domain. Failing that I would propose that all the Extra class questions and half of the Advanced class questions be removed (using the existing license structure). I really think that would benefit amateur radio. It may decrease the number of hams but would hopefully increase their expertise.

A case in point is that the president of a local ham club admitted in a newsletter editorial that, although he has an Extra class license he could not tell you what ohms law is !!!!! He admits that the reason is that he is a quick study and didn't really absorb the material. This really reflects a sad state of affairs. It also defeats the stated purpose of amateur radio, to foster technical expertise (part 97).

Out of curiosity, what did this neutrality code entail? Is this the
genesis of the rule that reads something like "communications with
other nations permitted except as specifically prohibited". Or were
hams not allowed to talk politics in, say, a German QSO?

I have a very nice SX-62A I would like to sell. It is 100% in working order and exceptionally clean. Photos are available upon request. The case is not original but is a perfect fit and very rugged. This unit was probably originally a rack mount.It is very heavy and will ship to DE,MD,NJ,NY,PA,VA,CT for $275.00
all other states $300.00. UPS can deliver to the afore mentioned states in 2-3 days.
Postal Money order gets immediate shipment Personal and Company checks must wait to clear(normally 5 business days. I will also include Sams photofact* Folder.
Photos of Front,Inside(Chassis)
The case has a spring like lock on it and is large enough to get to every component with ease. This radio is clean and ready to use.

Source record: 101944

Hello, Tubecntral is online for Email requests for any of my vast stock of new and low hours used vacuum tubes. No minimum orders or excessive shipping charges. I stock all types, but the stock varies due to constant sales and restocking. Therefore, a simple catalogue is not available.
But I know what I have, so if it's something as simple as a miniature radio tube or something like matched audio tubes, it's most likely available. European types also. I guarantee everything sold, and I'm the only guy here, so it's custom person to person dealings. I also have antique NOS resistors and caps, and copies of original transformer catalogues . If you have specific requests for tubes or anything else, please leave them in my E mail box.
Thanks to all !

Hi Dave - I can't exactly answer your question except to provide
the following footnote that appears in "Fifty Years of the ARRL":

"The neutrality code had made things difficult for historians in
one respect - since Canada immediately joined her British and
French cousins in the war, the League had to regard Canadians
as belligerents, and thus no news of Canadian participation in
the war was printed in QST until May, 1941, when the column,
"The Month in Canada" was begun."

I get the idea that the neutrality code might have prohibited
US amateurs from having QSOs with any amateur whose nation was
a participant of the war.

I imagine the late 1939 or early 1940 issues of QST would spell
out the neutrality code in detail.

I'm in need of a pair of crystals for 147.66/147.06 MHz.
I can offer you any one of the followig pairs in exchange:
146.16/.76
146.22/.82
146.37/.97

These crystals are from a Regency HR-2B; the crystal formulas are:
Receive: xtal freq'y = (rcv freq'y - 10.7 MHz) / 3
Transmit: xtal freq'y = xmit freq'y / 18

Thanks in advance,
Jeff KH2PZ

That is nonsense. I know exactly how he "studied" for those tests.
Any elementary school teacher can tell you a simple technique
for "studying" for a multiple-guess test where the answers are

published. I'm sure that's what he did. The current written
tests are a joke in terms of a barrier or in assuring that
the proper knowledge has been obtained.

Hey you guys think this is getting easier, in UK you only have two classes of lisences, and only one code test (12wpm). This is getting simpler to get the hobby going and stop it from dieing out. No one is saying that knowing how to comunicate CW at 20 words per minute is stupid, but CW is getting older and is not needed as muchfor communication as used to. I think that 12wpm is enough no one needs to know 20wpm to communicate on morse properly!

Dmitry

5612. Modifying old Broadcast transmitters to 160M or 80M?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-23 00:00:00 UTC
From: adicker113@aol.com
Message-ID: <1998072319581700.PAA22564@ladder01.news.aol.com>
Source record: 101960

I know Ive read that guys have done this but does anybody that reads this group modified an old AM broadcast transmitter to work 160 m or 80 m? the 80m is what Im curious about, if thats posibble without really tearing the unit up. And is is difficult to modify it to run SSB? I know that depends on the output stage class but dont they have to modify that if they want to run AM stereo as well?

any input is welcomed
Alan

Hi, my name is Don Davis, my call is WB3AXQ. There were several models in that series. They were all vhf/uhf receivers with coverage from 20 to 500 mhz, multi-mode(am/fm/cw/ssb depending on filters). I had use of a SR-2155 for a while. Unfortunately, I had to give it back. The series
of receivers is about 15 to 20 years old,very heavy, and almost impossible to repair without all of the module extenders. I hope this helps. BCNU,Don.

In other words the USm was not strictly neutral. It planed
joint combat operations with the Alliess starting late '40. before
lend lease, it engaged in Lend lease as a so called Neutral power. It
convoyed good to Britain, an act of war against the Axis. I am glad
we did it but don't call it strcit neutrality

By Heath SB series, I assume you mean the early SB100/101/300/400 series. I have both Heath and Drake and prefer the Drake TR4 series over the Heath SB series because the Heath uses printed circuit boards. PC boards are ok for solid state, but I prefer chassis mounted sockets for tube equipment. With the Heath, dust and dirt settle down on the components which are mounted above the chassis. With the Drake, the components are below the chassis. The TR4 has a noise blanker option which I find useful. I also dislike the Heath green color. To be fair, the Heath does have a better VFO in terms of linearity and accuracy and uses conventional ouput tubes (6146s). As far as performance, they are both fine for ham use.

Actually quite a few old plate modulated rigs have been modified for stereo use. Some are easier to do than others, and almost always a modern transmitter will offer fewer problems. However some of the older plate mod rigs sound alot better than PDM rigs from the 70's and early 80's. Well made modern PDM sounds better than almost all plate mod rigs. And they are nearly twice as efficient, especially in the lower power levels. Many a PDM XMTR has paid for itself in a matter of just a few years by power savings alone.

There is no need to modify the output class of a plate mod rig to go stereo. The L-R information is carried as quadrature modulation, realized by fairly narrow deviation phase modulation. When an AM XMTR is modified for stereo, the major change is that the crystal oscillator is replaced with a modulated oscillator.

The biggest problem is making sure the time delay and phase linearity of the RF chain and the Audio chain are equal so that the relationship between the I & Q signals is maitained.

Gray

The original poseter wasn't interested in modifying a broadcast rig
for stereo.

He was simply wondering that since broadcast xmtrs are being modified
for stereo, why couldn't they be equally modified for SSB use?

He was really confusing separate issues - the comparison isn't valid.

Even the Kahn independant sideband AM stereo system didn't allow for carrier or unwanted sideband suppression - thus not useful for true SSB suppressed carrier communications.

The Motorola/Hazeltine system (or whatever they're now calling it now), which you seem to be describing, has no real relationship to true independant sdeband or single sideband transmission. As you point out, it's a quadrature system using both amplitude and phase modulation - not necessarily requiring the final to be run in linear mode.

Here's a little nostalgia - the 1943 Radio Amateurs Handbook (published November 1942) starts Chapter One as follows:

"Someday the war will be over.....
Someday we'll be on the air again...."

Sniff....sob....

I have talked with many hams who lived throught he period, including one (W8YOS - SK) who got his license one week before the ban on radio transmissions. He told me how he was really disappointed and olonged for the time when amateurs could return to the air. He didn't participate in the WERS because he had no experience, and didn't really have time to know any other hams.

>
> Chuck, NT3G

Chuck:
Assuming the radio hasn't been "hacked," meaning
chopped, sawed, drilled, ravished, rivited and raped,
then you'll need 24-28 volts at about 1.4 amps for the
filiments and 200-250 (max) volts at about 100 mils for the
B supply. IMPORTANT: The B supply in a BC-348
does NOT return the negative to ground! The negative
goes through a choke in the radio and the voltage drop provides
grid bias to the audio output stage.

For years many people "followed the leader"
on BC-348 power supplies, building the trash
they saw published in CQ instead of LOOKING
AT THE CIRCUIT FIRST. They grounded the B-.
Then, when they cooked-off their audio output
stage and wondered why it sounded so bad,
they read and followed more rubbish on how to "improve"
it by introducing modifications with a chain-saw
and a blow-torch. I wish I had a dollor for
every hay-wired pile of nonsense I've pulled-out
of a BC-348. Sometimes I think that's where
the saying "ham-handed" came from ;-).
The "S" meter mods are the worst.
They make me shudder..

If you match the audio output properly with a good
line-to-voice-coil transformer, use a decent speaker
and align the radio according to the manual
the BC-348 will deliver plenty of
excellent-sounding audio.

Those 1930s-1940s engineers were smarter then
people think. The Army had lots of contractors
and designs from which to choose, and they chose
the BC-348 because it was superior to anything
else in its day. Treat it well, use it in

the way it was intended and it won't disappoint you.

Good Luck OM!
73 DE Dave Stinson AB5S
arc5@ix.netcom.com

p.s. If you can't find a 24 volt transformer, use a
12 volt 2 amp and a voltage doubler. The circuit is
in any radio handbook.

Moving, must liquidate the following items:

450 KW diesel generator set, low speed engine, very low hours
Cablewave Systems SLA78-50J 7/8" RF transmission line cable over 20,000 ft
Andrews EW 64 eliptical waveguide
Shipboard direction finding antennas (5)
water hoses 2" and 3"
Military hot water pressure washers (2)
19" equipment racks, unused (4)
Aircraft landing gear jacks, 40 ton capacity (4)
190 cc two-cycle engines, used takeouts (16)
Brass water pumps, with pulleys, used takeouts (26)
Miscellaneous waveguides and waveguide switches
Assorted power and communications cable
Large cable reels with stand (2)
Square D 100 amp service entrance boxes (50)
10 KW generator rotors and other generator parts
3' long screw anchors (aircraft tiedowns) (1300+)
Rechargeable gelled lead-acid battery kits with charger (180+)
Miscellaneous power supplies (2 pallets)
Large plastic fuel tanks for M1 tank, unused, crated (24)
Various military radio vehicle mounts
Small quantity miltary vehicle parts
Miscellaneous tubes
Electronic lock controllers
14" pedestal grinder
5 gallon military gas cans (20)
"Blue ice" packs (5000+)
Canvas cargo delivery bags (1 pallet)
Parachute canopies
Arcade games
Dolly Parton pinball machine
Mechanical bowling game
Variety of fiberglass and aluminum shipping cases
Computers and printers
Miscellaneous small electronic components
EMI shielding conduit
Older Clark 7000 lb forklift, solid tires, gas engine
Large quantity of wood pallets and boxes
Quantity of scrap metal and electronics

And many more related items not listed.

There are no radios, clothing or antenna towers or parts in this sale.

>220-222 MHz had been a ham band for a long time, at least since the 50s,

Hi Ed,
The following is from "50 Years of the ARRL":

"... In January 1946 the 420-430 Mc. (later expanded to 420-450) and
1215-1295 Mc segments were made available. In February the new six-
meter band was opened and the historic 5-meter band became TV Channel 2.
In March amateurs were assigned shared use of the "diathermy" band
and temporary use of 235-240 Mc while arrangements were being made
for the withdrawal of an aviation device from 220-225 Mc. ..."

No details are given as to just how long it took to remove that
"aviation device."

Allan, you might receive some helpful responses if you include your
callsign; folks in this neighborhood might get a little suspicious
about you wanting to convert a bcst band xmtr to 80m if you're not
a ham yourself. (160m should be pretty easy; 80 will be difficult -
a doubler stage would have to be added prior to the driver, and the
driver, final stages would have to be redesigned.)

5659. What makes tubes produce nice audio?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-24 00:00:00 UTC
From: Will White <wcw@asu.uswest.net>
Message-ID: <35B937D6.37639D4F@asu.uswest.net>
Source record: 101910

I now own enough tube gear, both radio stuff plus a McIntosh audio amp, to fully appreciate that tube gear does, in nearly all cases, produce audio far superior to solid state. Compared to my Drake TR-4, the audio in my TenTec Scout or any of a number of Japanese radios I have heard is positively tinny and tiny. So, why is this? All of the reading on the web and in amateur books I have done just makes the statement the tube audio is better, without giving an explanation of the electronics that produce this effect.

I have a party that is looking for a manaul for some older
Collins Radio broadcast equipment. Does anyone know
how to contact the current 'Rockwell-Collins', or, who they
have now become?

For sale or Trade very nice condition NC-183D (dual conversion model) with original manual. Radio plays great. I use it mainly for BCB DX and its super in that respect. I don't have the room for it, so would like to trade it for a small good quality table top radio like a Lowe HF-150, SW-8, SPR-4, FRG-7700, maybe a real clean FRG-7, or make offer . please email to timcook@erinet.com

Source record: 101834

I suspect that there are several reasons that toob audio sounds better

1. Most tube push-pull circuits have harmonic distortion (music of course, relies heavily on harmonics--a doubling of freq) so if you're going to have distortion, harmonic is the least objectionable.

2. If you have harmonic distortion, the even multiples are less objectionable and noticeable than odd harmonics. Soild state equipment usually has as its worst offender the third and fifth hamonics which do not occur in nature.

3. Because tubes operate at higher voltages, the possible "swing" of voltages going to the speakers is much higher.
A 12v amplifier circuit with almost direct coupling to the speakers can't produce very high voltages to reflect transients in music.
As a result, most tube amplifiers have a lot of headroom to handle transients. Even when solidstate designers overbuild amplifiers to permit massive amounts of power (really current, since they have voltage limitations) they pay a price in other types of distortion having to do with the crossover (or zero points) in push-pull circuits.

4. Since audio started with analog devices, most recording being made are backwards compatible, so I think the source material may be tainted towards tube expectations. Kinda hard for me to verbalize, this thought.

5. Don't sweat it, since the day of direct digital to the brain is not too far off. When they start reprogramming our think tank to toe the line with government policy, they'll also put in an A/D converter so we can percieve digital audio directly. Probably a protein string of some kind, or a chromosonal adjustment. Audio Nirvana can't be far behind!

Don't laugh too loudly???
Those are snorts of envy you're hearing. The SP-600 is a great radio. Hook up an antenna and maybe a speaker borrowed from your stereo, and tune around the AM broadcast band first, the the various SW broadcast bands; you'll have fun with it!

SWBC bands around 6 MHz
around 9.5 to 10 MHz
around 12 MHz
around 15 MHz (to 15.5)

To add to my previous response...I used to own two High End Stereo stores in the 70s (NYC and Stamford, CT). Even then, we used to comment how bad Japenese speakers sounded. I remember that even when Kenwood Audio came out with a line of speakers, they wre designed here rather than over there. Even so, the project head was Japanese and they were not very good.
Lafayette Radio imported Jap speakers...they were uniformly bad, except one which had a weird tweeter, a cone of parchment paper, standing up like an ice scream cone...this was glued to the tweeter driver and served as a non-directional tweeter, but it was a copy of a US design. Another decent Jap speaker was Radio Shack's copy of the Jantzsen 130 Electrostatic tweeter array. Finally the JVC 4301 globe speaker, which hung from the ceiling, and was peppered with 4 inch full range drivers always impressed me, but other than that, only US and Brit designs (ah...the Quad Electrostatics! the best speakers ever made).
Sorry to digress.

Answering this question without going into technical detail leave the
answer wide open to "witchcraft" and bogus claims - like "monster cable"
for speakers and super $100 ac power line cords.

Radiomatt wrote:

Most tube-type audio amplifiers use push-pull output stages. Even-order
harmonics are cancelled in the phase relationship - leaving the odd
order harmonics present. So the above statement is not correct.
What's this ...."in nature"????????

The voltage going to the speakers is ruled by Ohm's Law and its
derivations - and is all related to power and impedance of the speakers.
Solid state circuit designers are responsible for underdesign if there
is not enough "overhead". This has nothing to do with solid state vs.
tubes. Junk is junk, whether it is solid state or tube-type. Quality
has to be designed into equipment.

> 4. Since audio started with analog devices, most recording being made are

How do tubes and solid state devices differ in the way they handle
analog and digital signals????? The digitally stored sound is converted
back to analog before it gets to the audio amplifier. Are there separate
definitions for "linear"?

> 5. Don't sweat it, since the day of direct digital to the brain is not too far

Remember when everyone was told that certain brands of gasoline were
better than others? This bit of "witchcraft" advertising and belief
stopped when it was revealed that all the major gasoline refiners trade
back and forth as capacity and demand dictate.

Now we have "magic" brand 12AX7s and 6L6s.

Popular folklore makes interesting reading and conversation!

Sorry, I completely forgot about speaker cable gauges.
If you now use 12 guage, try 4 or 2 gauge, or even zero. Shielded, of course,
with no impurities in the conductor. Gold is best, because it doesn't corrode.

From: chouse <couryhouse@azonline.com>
Message-ID: <35BA1877.C0BAF657@azonline.com>
Source record: 101852

Hi folks, got a batch of qsl cards from the 30's and 40's to use for
display over some old equipment.
I need some guidelines as far as value as we purchase or trade for some
more of these......
Some great equipment shots and there are some without equipment that are

just unique
I have one here from w6sin from 1941 that is decorated in a manner that
you can well imagine from the name of the call!

Anyway I would imagine in this day and age where everything is collected

by someone
it would be interesting to hear from some other that think these are
neat also.

thanks Ed Sharpe, Archivist SMECC

The amount of mis-information and flat lies propogated about tube-type amplifiers (and in fact the tubes themselves) is incredible! I don't think I have seen as much pure freeze-dried bovine effluence since first seeing a reprint of a 1915 Sears catalog and reading the "Emporor's New Clothes"! I really didn't realize how really gullible some of the audiophiles are. I kind of feel sorry for the lot. Well.... back to the "mellow mid-ranges and cellery crisp highs" of the Mullard "Gold Pin Medallion Belchfire VII" 6V6 in the output stage of my Hallimerlund DX-1200AC!!!

QSL cards represent the time & effort & love put into a hobby over a lot of years by the person who obtained them. They chronicle a man's life & effort. They have only curiosity value for non-hams, and a sentimental value (like reading old QSTs) for hams who did not get said cards themselves. They may have some intrinsic value to deliotologists (sp? collectors of postcards) or philatelists (stamp collectors) due to their mailing cycle, stamps, subject matter, etc. These collections show up on ebay regularly and fetch a few cents per card in a large lot. There has been a lot of talk over the years in radio clubs about archieving these; but it seems that they collect a few thousand and they sit in someone's garage for a bunch of years.

I, for one, find it incredibly sad that a ham's life-time collection of QSLs winds up in someone's hands 50 years later, who asks "...what are they worth?". Not complaining or chastening - just a little sad.

Reminds me of an older Jewish friend who was a survivor of the Shanghi ghetto during the Japanese occupation. His father was a photographer and had taken thousands of photos of life in Germay and China with his family. Priceless documents. His explicit instructions are that all of these photos be destroyed upon his death. Shocked, I asked why. "I have no family to follow & preserve these, and I can't bear to think that they will wind up on the wall of some restaurant as decoration."

It makes me wonder about my own collection of QSLs & logbooks....

you might receive some helpful responses if you include your
callsign; folks in this neighborhood might get a little suspicious

Good point! Im KC5JBJ..

Ok this is to Bill, KD0HG, How do you key the transmitter, do you have a switch that turns on and off the plate xfmr contactor or do you remove the drive and leave the plates on? The latter bothers me because I dont know how high the plate supply might go without load or something arc over, but of course of the plate is off then turned on it could also arc over if some component is getting stressed..See Ive gotten spoiled by the soft-start circuits which bring the plate supply up slowly, rather than BAM all at once.
BTW, Im still repairing the xmtr that I will someday do this on, for the time being it is going into a dummy load, I want to keep my ticket

I think I heard once that tube amps tend to be slightly less linear over their normal operating range than transistor amplifiers are, giving the audio a slightly different sound that some folks prefer. I'm not 100% sure that that's the case, but I'm sure I'll find out.

>with my 5 year old son, and I won't get a lecture about how hard life use to
>be in the old days.

I have seldom heard anyone pubicly admit this. I, too, went silent as a
teenager in 1964, after growing weary of the fact that *nearly* everyone
I shared the interest with was either socially handicapped,
conversationally vacant, a know-it-all, or perhaps suspected of being
queer by most non-hams. I loved learning, designing, scrounging,
building and operating - all the things many now (rightly) bemoan for
their absence today - but an insightful QSO was rare, and I often had to
keep my non-ham friends away from the shack so they wouldn't hear the
sorry stuff that passed for discussion or intelligence on phone, and have
them wonder if there was something weird about me for playing radio. It
also seems perennial that *many* hams are incurable braggarts - always
reminding others of their job, degree, type of license, callsign, number
of beers drunk, claimed low price paid for latest toy, claimed personal
political expertise, claimed insight into why YOUR rig doesn't sound as
good as it should, whatever. Most people in other areas of life call
this "bullshit." There are a some very fine people who are hams, and I
often wonder how they stand the others. I used to bristle at the idea of
no-code, dumbing-down of exams, and the like; now, I think they ought to
just give licenses away to anyone who asks for one and will pay the fee.

We might even hear something interesting on the air for a change...what if we limited all newbie hams to 250w on AM & CW (no SSB or FM), 160-6, using only all-tube rcvrs, homebrew all-tube xmtrs with rocks, and homebrew antennas? We could have the VE's check only the *station*! Frig the dumbed-down "tests" and dah-dits! And let's allow music transmissions - sure would attract more interest than someone telling everyone how brilliant they are that they can stick a power supply onto a 55-yr-old ART-13 and talk through it without frying the rig (amazing - the rig survived the whole war in air combat, but might not make it through field day in the hands of a present-day ham), and maybe even win an ER award for so doing because it is "old."<groan/yawn>

And while hams are often helpful in civil emergencies, who really needs the Amateur Radio Service anymore to serve the public interest, or the nets to pass traffic?

IT STILL SMELLS IN WEST PALM BEACH!!!!!!!!

Well it happened again&#65533;Reliable sources have confirmed that at the ARRL VE test session held on Saturday June 19th 1998 at the Palm Beach County Emergency Operations Center, ANDRE LAVIGNA W3UH AGAIN was belittled and humiliated by a member of the ARRL VE testing team. This time the honor of this conduct goes to the head liaison GRAF BUCKENMEIER KG4U. Sources say that right in the middle of the test session GRAF BUCKENMEIER, KG4U, gave several reasons why several members of the existing test team services were not wanted.

GRAF BUCKENMEIER KG4U stated that ANDRE LAVIGNA W3UH is mentally incompetent, HENRY FELTON W4UJ, who has been a member for the past 11 years is not wanted because he brings ANDRE LAVIGNA W3UH (the handicapped person) to the test sessions. JOE KELLER W8WW is not wanted because Joe continues to condemn the actions of previous test sessions on the local repeaters.

STEVE NICHIPOR W2QX feels that he is not wanted because he "WILL NOT LIE" about what happened at the previous test sessions. SAM FALCO is accused of writing the SOMETHING SMELLS IN WEST PALM BEACH letter, so his services are not wanted by GRAF BUCHENMIER KG4U.

Getting back to the "MENTAL INCOMPETENT" phrase used to describe ANDRE LAVIGNA W3UH, ANDRE took the VE exam given by the ARRL and passed as all other VEs have done. GRAF BUCKENMIER KG4U stated that ANDRE's handicap might taint the test. ANDRE LAVIGNA has been at several test sessions, corrected exams and done this with no problems at all. THE AMAZING THING IS THAT ANDRE WAS NOT A THIS TEST SESSION AND GRAF BUCKENMIER AND THE GOON SQUAD HEADED UP BY MANNY PAPANDREAS W4SS STILL WANTS TO PUT DOWN THIS HANDICAPPED PERSON.

There is a light at the end of the tunnel, sources have confirmed that litigation will proceed if the ARRL or the FCC do not take disciplinary against these individuals. So we will see how GRAF BUCKENMIER, who is an attorney, explains how he can determine ones mental competency. Just remember one thing &#65533;one can tell when an attorney is telling a lie&#65533;their lips are moving&#65533; STAY TUNED FOR FURTHER DEVELOPMENTS.
***** THE ORIGINATOR OF THIS LETTER HOLDS AN ARRL POSITION AND WISHES TO REMAIN ANNOYMAOUS DUE TOO POSSIBLE REPERCUTIONS. HE HOPES THAT YOU UNDERSTAND AND HE APPRECIATES YOUR CONCERN.

I have a couple of WWII switch and morse key boxs as used
in Lancaster Bombers etc, to control and key the upper and lower
nav lights.
The boxs have several switchs with all the connections brought
out at the base so the
box could be used to turn rigs on or off, and the two morse keys
could be used
on two rigs. Would make a very interesting talking point in any
shack.
They are first class, and have the canvas cover that goes over
the front
when not in use.

1 NIB, unopened.. 35 Pound
1, new, no box, ... 30 Pound.

(plus postage)

cheers, Ben.

Source record: 101735

Hello all. Sorry for the long post.

I have my entire boatanchor collection of 23 years for sale as listed below. I am NOT a dealer, nor am I interested in any ridiculous lowball dealer offers. I paid the same prices for this gear that appear in this group every day, and I'm not trying to make any profit on this. I need cash, and have to sell. Just because I have alot of rigs does not imply I am willing to sell them at 50% the going rate! If it doesn't go as a group, they will appear one at a time on Ebay. I'm sorry to sound gruff - you would NOT believe some of the offers I have received thus far!

LOCAL PICKUP ONLY !!!!!! Tacoma, Washington (near Seattle). I will NOT ship, due to the quantity of gear and I am NOT splitting the lot out. I am sorry for this, but it's just too much gear to try to ship.

I am taking serious offers on the ENTIRE LOT. Please try to be realistic. Let's not waste each other's time, ok?

Most of the gear can be seen at my web site at http://www.boatanchors.com and follow the various links to different pages. Please note that although some gear is shown in the photos that is not listed, I am ONLY selling the gear in this list! If you are serious about an offer, email me and I can provide additional details or more photos.

Thanks for the space. Take care and 73 for now.

Dave WB7AWK

I have for sale a Drake R-4B tube type ham band receiver in very good condition. Includes the crytals installed for 160m, 17m, 12m and both the upper and lower portion of 10 meters as the stock radio does not receive all of 10 meters. There is some minor spotting on the main chasis but is otherwise in very good shape. Works great. $200 or best offer + shipping.

Hi Brian, I read your bulletin regarding the sale of your R4B receiver. That B line was a great station. I used to have quite alot of Drake stuff that I have let go over the past years with exception of my TR-6 station. I have a question. Would you have any idea what a TR-6 with both usb/lsb filters and Noise Blanker in very nice condition along with the MS-4/AC-4 and RV-6 electrovice desk mic would be sold for these days? I am retiring soon and don't have a need for holding on to this equipment much longer. Its presently in storage and hasn't been used since the end of cycle 11. I do know that the equipment is on the somewhat rare side and haven't seen any of it for sale for ages. I do see want to buy adds for the stuff though.
Any help?? Thanks de Fred and vy 73.
73 de Fred.

>> How do you key the transmitter,

I am using a Bauer 707 and had to modify the set slightly (I hate to modify ANYHING in these sets!). The driver B+ (LV) and filaments were all taken from the same power transformer in the original configuration. I installed a separate filament transformer for the oscillator and driver stages and af stages (the power tubes are on separate filament transformers). With this modification, I can turn on the main power to the transmitter and (with the new filament transformer) light all the filaments. When I key the transmitter, I have a simple relay sequence that (1) turns on the LV supply (the original transformer) and (2) activates the contactor that applies power to the HV transformer. When the transmitter is shut off, the relay sequence drops the HV and then the LV. This is easily accomplished using two relays with a diode, resistor and capacitor providing a 1/2 second to 1 second delay key-on and key-off to the second relay.

If you use an antenna transfer relay, make sure you provide ample delay to allow any residual RF (there is a lot of it!) to exit the tank circuit before you disconnect the transmitter from the antenna. Else you will burn up the relay very quickly. Forget a dow-key, they are not big enough. Remember that peak power is 4X carrier, and with the conservative design in AM broadcast transmitters, there is plenty of reserve in the tank circuit.

This is especially of note with respect to safety. Always keep one hand in your pocket. Always ground whatever you intend to touch with a safety wire first. Make it a habit, and go out of your way to discipline yourself, even if it seems silly or redundant. You will hear this repeatedly from everyone who has ever worked around these sets, and you will grow to appreciate why. There really is a lot of power stored in those components.

The super pro is a wonderful, but rather large communications receiver. If its in decent condition there are people who would kill to buy it from you. From a historical viewpoint it is uniquely the model to represent the peak of American short wave radio development from WW-II till they stopped making them. If you want to sell it Doran, make sure it goes to a collector who will take care if it. However if I were you, I'd learn how to operate it, read up on it in a book that describes boatanchors and keep it as one would keep an antique gem.
Good luck with it.
Stan

>Licensing fiasco?

Incentive licensing has been around as long as ham radio itself. The
idea of an IL structure was created in 1923. Back then the government
developed the Extra First Class amateur license; to be awarded the
ticket one had to be licensed for at least two years, take a test
similar to the First Class exam of that period, copy 20 wpm, and
have a clean record. Extras were then permitted to operate on a
band that those with lessor grade licenses were forbidden to use.
That band (200-220 meters) had originally been open to all hams.

When I had my ham license in the 60's (K7WAS, K0KDD), Novice licenses were for code only, and good for one year only. Technician licenses were for 6 meters and above. They had full privileges on those bands. Conditional, General, Advanced, and Extra had full privleges on all bands and there was no special privlege for EXtras (to my rememberance, correct me if I am wrong).

Hi all,
I am shortly going to move my homebrew homepage to another server (one that should be a bit more reliable) and so the new UTLs are:

http://home.bip.net/lythall (new homesite not yet operational)
http://user.tninet.se/~acz732k (The unreliable one that is going)
http://hem2.passagen.se/sm0vpo (Mirror1 - a reliable mirror - bookmark this site)
http://members.xoom.com/sm0vpo (Mirror2 - "belt and braces")

The second two sites seem to be the most reliable and they are both free!! I will shortly be adding basic circuit building blocks to the pages as opposed to yet more specific constructional projects. This should satisfy a lot of the E-Mail I am having.

Best regards Harry (a member of the BA webring)

Receiver works very well, contacts and switches may need some cleaning.
Cabinet and face plate look nice. 175.00 plus shipping.
Located in S.W Michigan area.
Thanks,
Stew WY8D

John
I've been using gap filling cryogenics (super glue) for that
application. Seems to be able to stand lots of heat.
However, it does depend on how much of the old glue remains.

Only one thing missing, Novice's had phone priviliges on 2 meters above 145 mHz.
75 watts and crystal control. Along with a lot of other priviliges lost to
many hams, this privilige was lost to the Novice when the incentive
licensing proposal became law in 1968.

5781. RF connector indentify?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-26 00:00:00 UTC
From: andykell@gate.net
Message-ID: <6pg38sonn1@orthanc.reference.com>
Source record: 101822

I need help identifying an RF connector on an old (50's) Heathkit signal tracer. I have constructed a probe but I need the male connector to complete the project. It is very similar to a PL-259 but with the center contact much shorter or perhaps a spring-loaded button. The size is also very close to the common PL-259 but the treads are slightly different as a modified PL-259 will only screw on about 1 turn. The O.D. of the connector on the tracer is about 5/8 inch and has no center hole. I have scanned the end of the tracer connector & it can be viewed here - http://www.3xw.com/rf_con.gif
I need the mate to this connector. If anyone can identify this connector or let me know of it's availability, I will be grateful.

Folks,

As a 70's era ham with a renewed interest in the hobby, I'm looking to find a working copy of the last radio set that I used regularly (the 570 version). I haven't seen anything quite like it among the new offerings I've seen in catalogs, and I have a healthly (or unhealthy?) degree of nostalgia for this radio. At an age of only 2 years, it was lost to thieves on a field-day outing in 1975. This transceiver is self-contained (no external power supply like its contemporary, the Drake TR-4), had an analog VFO with marker signals and was all solid-state except for a pair (or trio?) of 6146's in the final amplifier. It operated using break-in CW or SSB modes on 10-80 meters and featured an astonishing 550 Watts PEP output. It didn't have 6 meters or any 10M FM capabilities, but what a nice rig it was! My step-brother and I used to work the world on that rig using a set of dipole antennas (15, 20 and 40M) and a 1/4-wave 10M vertical. If you know of a unit like this in good condition, please respond to the group or directly to brenec@rpi.edu. Thanks.

Will,

You will hear all kinds of technical explanations. I agree with you, audio from tube gear sounds better to my ear. The best comment that I have heard on the subject came from a PBS special on the roots of Rock and Roll music. They were talking about how much better the music sounded on car radios of the early to late 50s and said that 'tubes gave you the "fat" sound that you do not get from transistors'.
Enjoy your tube gear.

I have a Turner 258 (Lo Z) Microphone. It is a nice looking silver mike with an integral stand. It appears to be brushed stainless steel. It has a push-to-talk bar and a lock for it.

Anybody know anything about this microphone? Can it be fit with other elements? What era is it from? Late 1960s or early 1970s?

Ian, K6SDE

For those who frequent the AM North America website and the WRL/Leo Meyerson site, please update your bookmarks as the routing link on the old url will soon be gone. I will most likely use the old url for something else.

AM North America is a site devoted to vintage gear, operating it, pictures of such and pictures of many hams and their shacks. There are many links to various other sites along these lines as well.
The new url for AM North America is http://www.bigcountry.com/w5ami

The Leo Meyerson site is one devoted to the man and his contribution to amateur radio. There are many photo's of Leo and the equipment. Also an online list of all equipment produced by Wholesale Radio, World Radio, Galaxy, and Globe with specifications, prices, and the QST issue they first appeared in. This site can be accessed from AM North America.

I hope some will find these pages useful and enjoyable!

Regards es 73

Ten-Tec Argonaut 505 QRP SSB/CW transceiver. Nice QSK, 5 watts input, about 6 lbs. Draws less than 100 mA on receive. There were only about 2000 of these produced. This one is very good looking, a 9.5 out of 10 cosmetically, and operationally perfect. It has the newer spinner VFO knob with the 1 KHz markings and the dial operates as smooth as silk. Comes with a copy of the manual. Great for camping, or just QRP operating.

Reason for selling: I have an Argonaut 505 already. I thought I was getting an Argonaut 509 when I bought this one. I wanted an Argonaut 509 for nastalgic reasons because I used to have one in my younger days. If you would like to look at some data, including a scanned QST advertisement, see: http://asd.state.va.us/tentec/tttrans.htm

$288 plus shipping or trade for a more common Argonaut 509.

Rob Frohne, KL7NA/W7

5809. TV-7 Help

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-27 00:00:00 UTC
From: Bill M <chillout@usa.net>
Message-ID: <6pj5nn$di6@bgtnsc03.worldnet.att.net>
Source record: 101699

I recently picked up a TV-7D/U and compared test results with a friend that has the same unit. My tester consistantly measured about 8 to 9 points lower that his.

I guess the obvious answer is that one of the units needs to be calibrated. Any other ideas, any definative tests to identify the problem?

I would also like to purchase a copy of the alignment / calabration procedures.

Please help!!! This hobby is hard enough with good working equipment.

Source record: 101700

Not much difference. 200 used 6C8 as detector/Noise limiter 240 used 6SL7. 200 used 6F8 as audio amp and phase inverter, 240 used 6SN7. 200 used 6SJ7 for AVC and 240 used 6V6. The rest of the RF/IF/AF was the same.

I have a few very nice reprints of two Army manuals for the TV-7 series of tube testers:

TM 11-6625-274-12 (38 pages) Operator's and Organizational Maintenance Manual
Complete operating instructions, including what those adapters are for. The maintenance part is just how to keep it clean and simple checkout. $9 plus $3 postage (Lower 48)

TM 11-6625-274-35 (60 pages) Field and Depot Maintenance Manual. This is the complete repair & calibration manual with schematics, detailed troubleshooting & calibration instructions, etc. $17 plus $3 postage in the lower 48 states.

Both manuals for $25 plus $3 postage.

Please e-mail if interested.

I am looking for a basket case HF amplifier that uses a pair of
3-500Z, 3-1000Z, 8877, or other tube(s). Will consider almost any-
thing, but would prefer Drake, Swan, Henry, Heath, and or????.
The condition can be anything from bad tubes to melt down, as long
as the case and the transformer are good. Anyone have something that
might be of interest.

Thanks

>Just more of the current generation way of thinking, "I shouldn't have
>to work for and earn it, I deserve it!!"

Yup, and that was typified by Randy Cook's immature (and poorly spelled)
response.

Randy illustrated the VERY THING he is whining about!

The problem is not the old timer's REACTION to his generation's personal
ineffectiveness. Rather it is the ineffectiveness itself that is the problem.

Only Randy can't deal with that! He can't even communicate ABOUT it well!

Randy is not being honest with himself.

He claims to have lost interest in ham radio, and yet here he is attempting to
discuss HAM RADIO!

What an amazingly self-contradictory guy he is!

From: KB4AEP <crslex@iglou.com>
Message-ID: <35BBD06A.830F0AA0@iglou.com>
Source record: 101754

This is simple. The MS-4 speaker is a good size full-range speaker in a case that is deep with an vented back. Most solid state transceivers use a puny, built-in speaker that was either designed not to reproduce, or cannot reproduce the low audio frequencies (bass) that seems to give Drakes that "tube" sound. If you hook the Drake transceiver to a similar wimpy speaker, you will be amazed at how bad the sound is (I've tried it).
Also, new rigs have a narrower bandwidth and better filtering which while reducing the QRM, make the audio sound narrow. You can do the same thing with an external audio filter or a grahic equalizer. Hook a big Cerwin-Vega 15" three-way bass reflex speaker to your Ten-Tec! ;-)

Hi OM,

I have had success with 5 minute epoxy by Devcon or RTV (room temperature vulcanized) silicon rubber. Black looks the best.
Before applying the adhesive or glue, clean the joint with with Windex or lighter fluid to remove dirt and oil films. be careful not to break or twist the tube wires when you are doing this.
Both methods work great and last for years.

You ever look at that thing on a spectrum analyzer, Jeff?
You only need one set of crystals in it to transmit all over
the band, and probably out of the band too. Real nasty
radio.

Stan, ????? I hope if does part with it, he sells it to someone who
will *use* it and enjoy it - that, in my veiw, is part of 'taking care
of it'. I'll agree, the SP600 is a fine piece of gear(I have a pair,
love 'em), but they're not at all rare, there are a number of better
rigs, and I doubt it could be considered an 'antique gem'. A damned nice
radio to own and operate yes, but 'gem'? Sounds like 'mint',
'collector-quality' and other dealer terms. Don't know of anyone willing
to kill to get one either - I had a fellow all but beg me to remove one
from the trunk of his vehicle a few months back (yes, I consider myself
quite fortunate).

Let's enjoy these fine radios, not relegate them to the shelf. ;)

> *

If you have a dead one you could always open the thing and put a little pcb inside with a 2-transistor multivibrator and a couple of power mosfets. If you built carefully, you might be able to keep the vibrator mechanism and drive its coil to get the authentic buzz. Don't forget transient catching diodes.

I last saw one a couple of years ago. I made a 12v fluorescent light in a hurry when the power strikes hit 25 years ago and it was still hanging in dad's garage when he sold the business. I expect the new owners will have thrown it away.

Cheers
David GM4ZNX

Hello, I just got 2 NOS Motorola (actually G.E.) 8298A/6146B's, these match up very close at 11,250 Gm, very strong, NOS original but slightly worn boxes, 40.00 on the pair, and one used, but tests at 8550 Gm 6146B,boxed by Electron tube laboratories @ 14.00.
Add three dollars shipping in USA, add one dollar if insured.
Interested in these or any other NOS and quality used tubes?, please drop me a line.
Thank you,
Joe Pratt, Tubecntral@aol.com

As I recall, its not an RF connector, at all. I think you'll find its an older, single-conductor, Amphenol audio (mic) connector. Look in an electronics cat and see if its not there. I don't think Radio Shack carries them, anymore. The Viking II (w/o PTT uses them). Hope I'm correct! de K3HVG

I have the following Radio, and electronic equipment for sale. Will consider trades for Pentium computer EQ. All working last time tested unless noted. Shipping is extra.
Thanks

• Tempo-1- Tube type Ham Transceive with Power Supply.Covers 80-10 meters. Looks good and works well. $200

. Siltronix 1011D excellent condition both in looks and operation. Scale of 1/10. I would rate 9. $200

. Swan 270B Transceiver has internal Power supply 80-10 meters. Looks good works well. $200.

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $100

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $125

Non Tube Items:

. AR Inc.- Stereo Amp, All solid state. $100

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

Thanks to everyone who responded to my question about
the unknown RF? connector. I have determined that it's
really a microphone connecter either Amphenol 75-MC1M or
Switchcraft 2501F. I have found both in a 1977 electronics
catalog but can't find either in any newer catalogs.
Thanks again for everyones help. Now if I could just
locate one or two at a reasonable price...

You might try inserting some Penetrating Fluid with an eye dropper, letting it work a while, before anything else. Also, if you have a can of FreezeIt, or similar PCB board testing spray (very cold), spray that in to contract the screw.

You can still send a Drake rig to Drake and get it fixed. They still have most of the parts. Both Heath and Drake are still reasonably priced. But that won't last for long!

As for Collins, here is one ham that hates em. I had to use this stuff in the military and it brings back bad memories. Maybe it's just me.

As for a pure fun bare bones radio... go SWAN. They are cheap, simple to fix and a ton of fun. Recommend the SWAN CYGNET (aka Baby Swan). In one box you get power supply and radio. It even comes with a handle. Just add mic and antenna. You can find them for $120-$150. $250 Mint. I have one and a TS-50s. I spend more time on the CYGNET. It's so bloody ugly... but it does bring back good memories.

What ever you do, don't wait too long....

WDØHCO

Source record: 101634

It's a great rig (I have two). The only thing I would do is change the speaker. All Hammarlunds produce really good audio. You might want to attach a stereo speaker to it.

Most of the problems with them is focused on the bandswitch. If you hit it with Carbon Tet or De-Oxit every two or three years you should be OK. Check the tubes as well. The stupid thing still works pretty well even when tube emission is very low.

Yea, sideband reception is so so and the Q multiplier is pretty corny but wadda you want for $60? At least you can tune into the 49 meter band and listen to Swiss Radio, BBC and the VOA in 60's style...

You DO remember the 60's ??

The NC-240D is the Post-war reincarnation of the NC-200, complete with both general coverage and ham band-spread ranges. Other NC-240 non-D models, built during WWII, did not have the band-spread ranges.

Best?
Kenwood Twins:
R599 A or D
T599 A or D
Kenwoods introduction into the US market back in the 70,s. These uinits were meant to directly compete and out perform the Drake's. They did, they do. The rest is history.
They are a remarkable setup They outperform most radios of today.
Jeff..

5861. FS: 6M rig: answer the question: What drifts like flotsam in the Gulfstream?

For sale, for Swan afficionados: (You would have gotten the right answer!)

Swan 250C, with the NS-1 Noise silencer and 117XC ps/spkr.

To take a look:
http://www.aade.com/hampedia/swan/swan.htm

(The little box an the left side of the rig is the NS-1)

Actually looks good, works well, and made the recommended
anti-drift mods, so now it's like rowing against the current.

Checked out, alligned, new finals. Copy of the manual.

I was kidding about the drift - sorta. If chasing 6M dx, no problem.
Just don't expect 4PPM stability - after all, it is a BA! (And cool)
(Oh, and the C model doesn't use the pesky 7360!)

73, Ted

(Forgot: $250 plus shipping from NJ)

Source record: 101644

I partly agree with you, Jeff.

I agree to that Kenwood twin is a good radio, but it does not outperform Drake (I cannot say this definitely, but I am just taking some words from my friend who had both setup once before). I have a C-line (and just bought another set, I don't know why, though), and I am really happy with that. I did not do actual comparison side by side, but I like Drake better. It must be a personal perference, but I Drake has better sound quality, and more ways to improve the performance even though the unmodified unit works excellent.

Oh, well. Kenwood twin is also what I am looking for, too. There no question about that Kenwood twin is an excellent radio, but I cannot really say which one is better.

Thanks.

The nc200 was made between 1940-42, while the nc2-40-d was manufactered during 1947-48. The later also has a phono input on the front panel and may not have a crystal filter. k8xx

I remember certain parts better than others :-) ....I did the deoxit routine;
I agree that a better speaker would help. I'm impressed how rock steady the
rig is after only a few minutes of dust burning time. I'll probably replace
my SX- 43 with this as the primary SW box. Thanks.

I have a 2 meter converter for a receiver with a 28-30 MHz tuning range.

It's a Vanguard Electronics Lab, Dual Gate MOSFET converter with BOTH crystals for full band coverage. Requires 12 volts. In very good condition with a few smudges on the case that I think will polish right off.

This was a very hot converter in its day and is a perfect "period" complement to receivers from the 60s and 70s. I bought it years ago and never did use it.

$35 shipped to you. $40 if you wish UPS COD.

Ian, K6SDE

5868. Re: NATIONAL NC-2-40-D NATIONAL NC200

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-28 00:00:00 UTC
From: wdaorcda@my-dejanews.com
Message-ID: <6plhel$2ub$1@nnrp1.dejanews.com>
Source record: 101650

Does anyone have any knowledge about the NC-200TGM model? The TGM does not have the ham bands as separate bandswitch positions and could be called a general coverage version of the "plain" NC-200. I have both versions and I'm very interested in what the cosmetics of the TGM are, or are supposed to be. My 200 has the two-tone grey paint whereas my 200TGM is done in the grey that matches the HRO-50/60 grey. The paint job looks to be either original or an excellent repaint done quite awhile ago. FWIW, the TGM also has a labelled phono input whereas my plain 200 has an unlabelled phono input.

Thanks for any additional information,

Warren Anderson (wdaorcda@usinternet.com)

They have good audio, but is it stable? I've seen a few swans that kinda wander a bit. But still pretty good. A properly working drake,once warmed up won't have that problem. Also the stability on a drake is the same no matter the freq. Not sure on the swans, I really don't know that much about those. Another post mentioned the Kenwood twins, and those are real good, but as they are tube driver/final only I pretty much consider those a solid state rig. But I agree those are good. MK

> I need cash, and have to sell.<

It doesn't sound that way...? Offense not intended.

>Just
because I have a lot of rigs does not imply I am willing
to sell them at 50% the going rate!<

We're ALL tired of people trying to get something for nearly nothing
(unless it is us), but it would seem reasonable for someone making a cash
offer for picking up 40 hunks as-is to get quite a significant rake-off,
no?

I found a handy rule-of-thumb is to take what one told the wife it is all
worth, and divide by 3.

>If it doesn't go as
a group, they will appear one at a time on Ebay.<

Maybe you'd be happier there, but this indicates that you are willing to
sell and pack/ship individually, yes?

Most "dead" vibrators just have oxidized contacts. Don't take it apart and thus break the seal, causing it to oxidize twice as quickly later, until you try cleaning it by running it on AC. I have posted how to do this a number of times in the past - if you do a DejaNews search in rec.radio.antiques+phono for subject "vibrator" you can find it, and there is also a write-up of this method in Hint & Kinks, about 1960 that had originally appeared in QST. If you live where the mains are 220vac, you will want to step it down to 110 first. Correctly wired, the AC will start and run the bejesus out of the vibrator, burn off the oxidation, and it will work fine afterward. We did this all the time with mobile supplies in the early '60's.

Rick,

I also had them both. In my opinion the R4C outperformed the R599D. The Kenwood did not handle the problems generated by strong adjacent signals as well as the Drake and the Drake could be put on any frequency with the addition of the proper crystal. I would put the Kenwood on par with the R4B overall. The Kenwood, as I remember it, had 160 meter receive but the T599D had no transmit capabilities on that band. On the other hand, I consistantly received better audio quality reports with the T599D than with the T4XC. I also think that the 6146B tubes were a better choice than the 6JB6 sweep tubes used in the Drake. As far as the Heath twins (the SB 300 and 400) are concerned, I never owned them but did use them on loan for a time. They worked well but again, I would put them on par with a Drake B line, which still is not bad company. In the spirit of full disclosure, I sold my Kenwood twins in order to purchase the Drake C line, so I may be biased :) Wish I had them both back.

I remember paying $288 for one of these in 1972. I got it out to the car,
hooked it to a pair of AA lantern batteries (while in the car) and got
it going out in the radio shop's parking lot. Took it to Barbados and
made QSOs as 8P6FS. Etc. etc. etc. etc. much fun radio!

Surely you must be referring to the KW Viceroy!

This was the "British Collins" rig of the 1960s.
Not as good as Collins' gear but still fairly nice.
I am told to avoid the KW Vespa. The Vicery and the KW2000
are reported to be a little better quality.

Best to ask some of the older G3 ops!

Please do not send me ANY SPAM!

Pursuant to 47USC227, any unsolicited commercial email sent

Free if you'll come to Houston, TX and get it...

Taiyo Marine ADF, removed in great shape from a large tanker, covers
200-580KHZ and 1500-2800KHZ, 120VAC supply, analog dials. Made in 1987.
This is an attractive and impressive-looking unit in good working order.
About 18" x 18" x 18" and it weighs 70 LBS, so I do not want to ship it.
The loop antenna is not available, unfortunately.

Free if you pick it up, $100 + shipping otherwise.

Email me or call 281.597.0068. Thanks, Adam

5895. FS: Navy VLF RAK-7 Receiver

For Sale: RAK-7 VLF receiver with external matching power supply. Rig works needs a good going over as far as cleanup, but it works very well as it is. It is a regen. and is super sensitive. I can tune in Lowfers and all kinds of stuff on VLF with it. I am selling it as I got a more modern setup and need some space. I will sell the both pieces together for $50.00 pickup only!!!! I am located in Northwestern Pennsyvania. Bring some extra cash and I will load you up with boat anchor stuff! Don't worry, I'm not getting out of the boat anchor hobby, just thinning the stock a little.

Thanks,

Chris KX0Y in PA

Hi All,

I realize this is a long shot, but here goes....

I'm looking for the Ten-Tec Argonaut 509, serial number 509-4580. It had green LEDs replacing the dial lights and a couple of diodes back to back tacked on the SSB generator board to provide some RF clipping. Back in my freshman year in college, my dad gave me that rig. I had a lot of fun with it, but then in my lean grad school years I traded it at TNT Radio in Minnesota for a shiney new Icom IC-735. If you have any info on this perticular radio, please send me a note!

73,

Rob, KL7NA/W7

> --
> Bill W2BLC
> Remove the 599 to reply
I'd go for the drakes, but the twins not the tr-4. The twins much more
versatile.
Also work 160 and warc. The heaths are ok, but I think the drake has a
much better receiver overall. The avc wins hands down on the drakes from
the ones I've seen.
In my lowly opinion the drakes were the 2nd best tube rigs next to
collins. Used simular type circuits with the pto,stable low freq ocl
ect. And the drakes have it over the collins in that they run 500+ kc a
xtal instead of 200+, and having 160.The tr-4 doesn't have 160. Or the
sb-201 etc I don't think. MK

5900. Re: HICKOK 600A SETUP DATA FOR 6550 TUBE NEEDED..

> Looking for either tube tester settings (EICO 666 & family)
> or enough basic data to develop the tester settings...

12AH8
I show it my tube tester book , but it's a sencore continentaL not a eico. So don't know what the differences would be. But I can tell you it's a 12v of course, and fit's socket 25 on this machine, which would be the same as a 12ad7,12ad5,12ae7,12av7,ect for crossing over for socket. For emission tests show B-load set to F. C-grid set to 2 and D-screen set to 0. It shows no mutual conductance tests for that tube.So a perfect match in this book would be to a 12ad7. Same settings on all. So if you show 12AD7 that should work hopefully. MK

Source record: 101590

Uncovered an ancient "radio" set recently. I emphasize "radio" as I still
not convinced that is what it is....
Two parts: one looks like a separate power supply-three transformers, one
or two coke bottle rectifiers(power supply has Hammarlund
on it) The other part is the main unit that has several larger tuners that
are among an immense amount of other switches and controls.
This thing is in great condition (at least for it's apparent age). I didn't
try powering it up for fear of fireworks. Anyhow, it's up for grabs.
If it's worth the trouble and someone would like to trade me something for
it, (tube Hi-Fi or guitar amp gear), I'll
remove it from the "executioners" garage. I can't imagine shipping this
beast anywhere-it has tremendous girth and poundage...
If anyone digs this sort of item, E-mail me for I dwell not among this NG !

Thanks,
Bill
p.s.-I'm located in North-eastern Ohio. There's some dialog regarding this
posted 7/28("just curious") on rec.audio.tubes

Message-ID: <6pnf77pup1@nnrp1.dejanews.com>
Source record: 101595

I have a 2 meter converter for a receiver with a 28-30 MHz tuning range.

It's a Vanguard Electronics Lab, Dual Gate MOSFET converter with BOTH crystals for full band coverage. Requires 12 volts. In very good condition with a few smudges on the case that I think will polish right off.

This was a very hot converter in its day and is a perfect "period" complement to receivers from the 60s and 70s. I bought it years ago and never did use it.

$35 shipped to you. $40 if you wish UPS COD.

Ian, K6SDE

I tried it. The things I tried didnt even work. This is the wrong place
to post a page like yours, but even so, at least wait till it works.

5922. Removal of Reserve For Hammarlund HQ-170 & OEM Spkr on Ebay

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-29 00:00:00 UTC
From: Karlan@juno.com
Message-ID: <6pnnfj$53t$1@nnrp1.dejanews.com>
Source record: 101598

ATTN: I HAVE DECIDED TO REMOVE THE RESERVE PRICE FOR BOTH THE
HAMMARLUND HQ-170 RADIO & O.E.M. SPEAKER BEING AUCTIONED
SEPARATELY. ALTHOUGH I BELIEVE THAT BOTH OF THESE UNITS ARE
TRULY WORTH THE RESERVE I SET DUE TO THEIR FINE CONDITION,
I WILL SELL EACH UNIT TO THE HIGHEST BIDDER EVEN IF MY
RESERVE IS NOT MET. THANK YOU FOR YOUR INTEREST.

The auction ends this coming Sunday.

Being auctioned off separately--two extraordinary condition
items by Hammarlund.

If you want excellent original factory condition one or both of
these Hammarlund items are for you.

For Photos & Description see:

Hammarlund HQ 170 at: ITEM# 22886261

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=22886261

Hammarlund O.E.M. External Speaker at: ITEM# 22887942

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=22887942

Thank you.

5923. FS: Tube Manuals, Book sets, ARRL

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-29 00:00:00 UTC
From: John Wieder <jwieder@rmi.net>
Message-ID: <01bdbb18$ae542040$1f0a5da6@wieder>
Source record: 101599

Last of the books. I am selling mostly in sets only as I don't want to fool with shipping a few books here and there. Prices do not include shipping and all are in good condition unless noted. Thanks. John jwieder@rmi.net

SET 1: ARRL License Manuals - set of 10 - 2 ea 1952 (early and late in year editions) , 1954, 2 ea 1955, 1964, 1973, 1975, 1976, 1959 - set of 10 - $10

SET 2: ARRL Publications - VHF Manual 1968, Understanding Amateur Radio (2 copies) 1971, Operating Manual (2 copies) 1972 - Set of 5 - $5

SET 3: First Principles of Radio (1944) 250 pages paperback; FET Projects 1966 Motorala 90 pages; Solid State Projects from Motorola 1968, 67 pages; Radio Shack Transistor Projects 1974, 90 pages; RCA Hobby Circuits Manual 1968, 200 pages. Set of 5 books - $5

SET 4: Nice set of Allied Radio Books from the 60's. Each book is approximately 75-100 pages. Nice little reference books. Each set contains the following:
Integrated circuits and projects
Understanding transistors and transistor projects
Electronic Data Handbook (tube substitutions, formulas, etc)
How to build electronic kits
Understanding your oscilloscope
Encyclopedia of electronic components
All about HiFi and Stereo
Getting started in Electronics
Using Your tape recorder
Understanding schematic diagrams
Understanding and using Citizen Band radio

Set of 11 books - $15

**RCA Receiving Tube Manuals, etc (some say Physics Dept on cover)
RC21 (1961) - $5
RC24 (1965) - $5
RC26 (1968) - $5
RC25 (1966) - $5
RC25 (1966) same as above - $5
PT60 (1963) Phototubes and photcells manual - $5
GE Transistor Manual (1962) - $5
GE Tunnel Diode Manual (1961) - $3

** OR BUY THE SET OF 8 FOR $20

5924. FS: Drake SC-2 2m receiving converter

Source record: 101601

Hello all. I have a very nice SPR-4 for sale for $330 and shipping. It comes with a photocopy of the manual. This model has a built in speaker. It has crystals installed for ranges of 500 kHz, starting with the following frequencies(in MHz): .2, .5, 1.0, 2.0, 2.5, 4.0, 6.0, 6.5, 7.0, 8.0, 8.5, 9.5, 11.5, 12.0, 13.0, 15.0, 16.5, 17.0, 17.5, 21.5, 22.0, 22.5

The radio plays perfectly and is in excellent cosmetic condition. I have a picture of it at: http://www.bcinet.net/darla/spr4.jpg

>
If people don't get on six meter AM, then there sure won't be any activity with that mode. There are all those old rigs around, and people put them aside "beause AM is obsolete" and then the band is empty. I don't know if there's much AM activity on six these days, but if everyone waits until there is, then nobody will be there. It's a collective effort.

The same thing with 2M. But six has the advantage that if nobody is on locally, there are band openings where you can work someone, as long as someone somewhere else has bothered to put their old AM rig on the air,

Communciations Quarterly recently had an article about a 6M solid state transceiver for AM. It was a nifty design, taking advantage of recent devices and trading off between simplicity and performance. It might not set a trend, but I can imagine people building it because it is a neat design, and then putting it on the air because they've got it. I've certainly thought about using parts I have to make a similar rig. If people simply wonder whether it's worth putting on the air, instead of simply putting it on the air and calling CQ, then there won't be AM activity. If they put it on the air, someone may hear it and answer. Or someone with a more recent SSB or multimode rig might hear it, remember the old days, and put their AM rig on the air, or tell someone else who will.

One of the sad things I notice from reading this newsgroup is that people are putting fairly high prices on older rigs. That indicates to me that in many cases it is a matter of collecting, rather than using them. I don't think there is a lot of demand for old 6M AM rigs, so one would think they'd go for very little. But I see them carrying higher prices, and I don't think a lot of people will spend the money because they want to get it on the air, especially if there's uncertainty of whether there is anyone else to make contact with. So the rigs go on the shelf, and then there's no AM activity on 6M.

Hi Dave

I have just read your artical on vibrators used in radios,
I have the transistor version from a old VHF radio that was fitted in tanks
If it is of help to you I could trace the circut out on paper.
If you e-mail me your phone no or home address or better still
if you have a fax I could send it to you

My first rcvr was a hammurland. I had kinda noticed the same on mine I think if I remember right. Been a long time. I do know that the hammurland q-multiplier isn't quite up to the one in the old drake 2-b,2-c with the speaker multipliers. The 2-c and 2cq I have still have the best q-multiplier I have seen so far. The 2 bq the same I think. But overall the hammurlands pretty good. I made a lot of novice qso's on the one I had. Used it with a homebrew xmtr and then a valiant. MK

Rich,

I e-mailed you with an offer to buy this rig on the day of your post,
but have not gotten a reply.

This may be my fault as I have been having trouble with the local phone
company, and hence, internet service.

Or perhaps you noted it "SOLD" and I missed the post.

Ennyway, if you still have it, I wannit!

Tnx & 73,

Bob, w6lac

I have heard signals on 50.4 Mc/s. AM here in the DC area.

There is also a net on that frequency every Sunday morning, that has
been on every week for 37 years or so I am told.

Source record: 101619

this is a scott radio made by the scott co for use aboard subs. is was incredibly well shielded and bypassed to reduce rf emissions to an absolute minimum. is was general coverage and most were made during ww2 for the navy and tactical stations. you can see a scott at www.radiofinder.com. his is for sale and perhaps he may have some details about a manual. dave WA1HRJ

Hi

I need a manual (or copy) for a Harris RF-3352 FSK Terminal. I will pay,
of course.

If not possible, then I need info on how to hookup the DB-25's.
Pinouts would be good. I can figure out the TTY loop connections and
operation of the unit by myself.

This looks like a nice unit and any help will be appreciated.

You can email me.

Thanks in advance.

Harry

Tim;
Having owned both, the L4-B was better built, primarily due to the plenum cooling for the tubes, Vs the muffin fan in the L-7. Power supplies virtually identical. Be careful on loading the L-4B on WARC. check schematic well, especially tank circuit. Insure nothing is resonant circa the old PA-76 Alphas w/ 24Mhz plate choke will becomes damaged if 12 mtr. use is attempted.

> Jeff..

Hello Jeff and the group....

My opinion....

I don't totally agree that the 599 twins out perform the Drake twins. I have two Drake C-Lines, a TR-4 and the 599D Kenwood twins. All are on-line all the time and I use them all frequently. I believe the Drake receive audio is superior to the Kenwood audio and the PBT on the Drakes is hard to beat with anything.

On the other hand, I believe the 599D transmitter is just as good as the T-4XC if not a tad better.

The Kenwood S-599 speaker does not do the receiver any justice either. Similar to the poor performing Drake MS-7 speaker. I have two Drake TR7 transceivers, but run Collins speakers on them because the MS-7 audio is inferior comparatively speaking.

The 599D receiver has a lot of nice features and I enjoy it very much, but I believe that there is a little bit of filter "blow-by" which allows a little unwanted crud in the receive audio. The bottom line is I would not sell either since they are both good rigs.

I'd be interested to hear more evaluations on this..

5964. Hammarlund HQ-180

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-29 00:00:00 UTC
From: Atherton MD <matherto@bellsouth.net>
Message-ID: <35BEA74F.AE918943@bellsouth.net>
Source record: 101671

Hello-It took me a while but I finally found a newsgroup that I hope that can give me some info. I am not a ham operator but may be soon! I recently got out of storage my Father's old Hammarlund HQ-180 Receiver. It has not been used in 18 years or so. I attached the speaker, hooked up a piece of wire about 20' long as the antenna and plugged it in the wall. WOW! The darn thing worked! I have enjoyed listening to it. I also have the manual for this radio. My Father wrote the date he purchased the radio as July 24, 1961, 37 years ago this month! He also wrote in there the dates of when he replaced tubes. the last date in there is March of 1967. I see from searching the net that the cost of it new was about $439. I am very curious to know just what it is worth now. No, I don't want to sell it, just would like to know it's worth. If you can give me any info on this radio that may be of interest please do so. If you know what it is worth please let me know too! I am beginning a class on Aug 16 to get my Technician plus license. I hope to get my Father's old call sign as my call. I look forward to hearing from you soon!

Please email me at: matherto@bellsouth.net

Thanks,

Marvin

<snip>

One requirement that I'm aware of is for the unti to be vacuum-tube based, not SandState. Not just tube finals, not just heavy. 830's are a nice radio, but I doubt anyone would sonsider them a boatanchor just because of the 12BY7A and two 6146's in the final amplifier. 940's and '781's are heavy, but they wouldn't be considered boatanchors either. Perhaps in years to come they'll be referred to as 'Big doorstops'? ;)

The real commercial BA's IMHO are the early Nationals - AGS, HRO's, NC-183's, 300's etc., the early Collins receivers up through the S-line, the many Hammarlunds, Hallicrafters, or any of those fine early commercial sets. (not that homebrew wouldn't qualify also, most just disassembled them for their useful parts).

Transmitters the same - those wonderful Collins, Johnson, Hammar, Halli, C.E. rigs, WRL, Heathkit and more.

As far as the oldest, well....Art Collins started building rigs in his basement to sell in 1933 or '34 as I recall, and National was building it's 'Thrill Boxes', the SW-2 and 3, FB7, about the sane time. Hammarlund/Roberts(if memories serves me correctly) may have come sooner, perhaps the late 20's, but more than likely the early '30's. The Comet/Comet Pro comes to mind. There are many more.

I'm a bit behind the curve as far as memory of early BA's. I was born about the time you were licensed. ;) I do still have fond memories of early radios from the QST's given to me by K1EN, Gary Watkins. He was probably my first or earliest 'elmer'. I do recall drooling over the KWM2A in the ads, and marveling at many, many other rigs in the older issues. I've since come to own many of the rigs I thought I'd never see.

Hope this view from 'up narth a ways' answers some of your questions. Perhaps we can rekindle a discussion about BA's, not prices/value/'collectability' *gag*

As I missed the original question by TechText - on holidays - I'll post my two bits here, in the hope TechText finds it. Sorry if it's aimed at the Dutch - Techtext mentioned he was in the Netherlands...
These vibrators might very well be found at Baco Surplus Stores, Kromhoutstraat 36-38 in IJmuiden, The Netherlands. They have piles of vibrators in varying conditions. You might have to root through them, though.

Cheers, Wammes

Source record: 101547
Cross-posted to: sci.electronics.equipment,sci.electronics.repair,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I recently came across a couple plugins for my 7603 scope.
One is a replacement timebase, a 7B53N to replace my
faulty 7B53A. Problem: no readout now. Does the 7B53N not
support the readout feature of the 7603.
(not an important thing, since I rarely use a scope camera...)

Next plugin if found was a 7D13 Digital Mulitmeter. It may work, but
does not display properly, just get a jumble of dots where the meter
display should be on the screen.

FYI digital display works on my other assorted plugins, as well as
the "broken" 7B53A, so I dont think it is a problem with the digital
readout board in the mainframe itself.

Anyone have any further info on these plugins? Can anyone confirm that
the 7B53N does or does not support digital readout? Does anyone have
a schematic or manual on the 7D13 multimeter plugin, as well as info on the
temp probe used with this plugin?

Any help would be greatly appreciated, but PLEASE EMAIL ME DIRECTLY!
My news server is a bit spotty, and I may not get your reply.

The 7603 is a good scope, both for its day (mid 70's for mine) or today,
and
is a decent performer up to 100Mhz. Best of all it does what I want it to
do.

Thanks all

Tom Norris

Source record: 101551

Reading through many of the ads in this "boatanchors" newsgroup,
I began to ask myself a question that's been asked here many times
by others...with no "definitive" answer. The question was...just
what constitutes a "boatanchor"? I began to also wonder...what are
some of the *oldest* commercially-manufactured boatanchor rigs?
As a young novice licensee back in the early 1960's, I recall what
I felt were "boatanchors" of that time...rigs that ham-friends in
the neighborhood had with names such as Lysco, Central Electronics,
Harvey-Wells, RME, ...etc.

The question I'm raising here is..."what are some of the *oldest*
boatanchor ham rigs which were commercially made?" Which rigs do
you remember as being considered "boatanchors"...many years ago?
Do you have any of these "genuine antique boatanchors"?
There's lots of "history" behind many of the "genuine antique
boatanchors"...most of which were manufactured by companies that
are long gone...but their history and "legacy" lives on.
Might make for some interesting discussion...?

No, all 7000 modules (and indeed also all 'scopes) with a part number
ending in N do not support digital readout. N means Non-Readout.

> Any help would be greatly appreciated, but PLEASE EMAIL ME DIRECTLY!
> My news server is a bit spotty, and I may not get your reply.

Mail copy sent.

> The 7603 is a good scope, both for its day (mid 70's for mine) or today, and
> is a decent performer up to 100Mhz. Best of all it does what I want it to do.

The 7603 is also a great mainframe for a range of instruments such as
spectrum analysers (e.g. 7L14 and 7L18) and also TD Reflectometers as
it's large screen and digital readout size offer a great display.

I've come across two different models, one with fan cooling and one
with convection cooling. I prefer the quieter ones.

6003. FS: Heathkit HO-13 and HO-10

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-30 00:00:00 UTC
From: carterm@mindspring.com
Message-ID: <35c0a503.14913634@news.mindspring.com>
Source record: 101562

I have a very nice HO-10 Monitor Scope and HO-13 Ham-Scan for sale.

The HO-13 is the nicest one I have seen, and the HO-10 is very good as
well. The front panels are both in mint condition, and both units
have some small places with paint missing on the cases (very common
with these units).

I scanned in photos of the units, which may be viewed at:

www.mindspring.com/~carterm/ho-10.jpg
www.mindspring.com/~carterm/ho-13.jpg

Both units function correctly (transformers are fine), have bright
traces, and are wired for the 3395kHz I/F (SB - line).
I have photocopies of the manuals for both.

There are no mods, or non-original paint, etc. with either unit.

I am asking $185 for both units.
I prefer not to split up the pair.

TNX ES 73,

Mike

6010. WTB:Good Cond. & Working 60's Era receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-30 00:00:00 UTC
From: Doug Person <ki6bq@ibm.net>
Message-ID: <35c0d88a.0@news1.ibm.net>
Source record: 101569

Like many of us, I'm interested in putting together the kind of station I used as a novice back in the early 60's. I have found an old KnightKit T-60 that seems to work and need a VFO to go with it and some kind of suitable receiver.

Trying to stay away from some of the bigger units. Looking for Drake 2B, Lafayette HE-30, or any of the smaller novice-type receivers of the early to mid 60's era. Happy to listen to advice, opinions, offers, comments. Thanks.

Doug Person -- W4DXV

Message-ID: <6pr4r7$2ti$1@supernews.com>
Source record: 101574

Greetings,
I have a very nice pair of Hallicrafters twins for sale. The SX-117 and HT-44 with matching PS-150-120 power supply look excellent and work very well. All original in appearance inside and out. I have had these on the air recently on 75 M ssb and received excellent reports. These include original manuals.
I would like to sell these as a set for $400 plus shipping. I guarantee them to be as described. If no one wants the set, I will entertain offers on individual units.
Thanks,
Dennis Clemenson NT0V

From: Dennis Clemenson <dclemenson@stellarnet.com>
Message-ID: <6pr4lvqfn1@supernews.com>
Source record: 101575

Greetings,

I have two oscilloscopes for sale. This are good for monitoring and repair work.
The OS-8G is one of the last of the OS-8 series. This one works fine, I used it for several years as an RTTY monitor scope. It is solid state except for the CRT, so a lot more reliable than the earlier OS-8 series units. Lots of knobs and switches but the bandwidth is not very wide. It works fine for rtty, audio, low freq RF. I don't have a manual for it but it is easy to use. Physical condition is very good, CRT display is good. I would like $60 plus shipping for this.

The Telequipment S54A is in excellent condition with original manual. This has a vertical bandwidth of 10 MHz, triggered sweep speeds up to 0.2 microsecond. Calibration on this scope is very good. Display is bright, cabinet and knobs are all excellent. This scope is very stable and works nicely. I would like $60 plus shipping.

I guarantee these scopes to be as described. No probes are included. Please email for further details.

Thanks,

Dennis Clemenson NT0V

For Sale:

Scope Module from GRC-142 TTY modems. Contains 2BP1 CRT, has
internal DC/DC inverter for all potentials from a nominal 20-24 VDC
source at a few hundred mills. Has identical X and Y axis deflection
amplifiers (transistor) and an intensity squelch circuit that blanks the
unit in the absense of a signal. Unit is compact in a cast aluminum
housing withe full mu-metal shielding on the crt. Electrical
connections to unit via standard DB-15 plug. Only external attachment
is intensity pot or a pair of resistors to set intensity level.
Centering and focus controls are contained in the unit and accessable
through access holes. The unit is like new from maintenance depot
pack. With full sized print and notes.
$75 post paid conus.

Thank you for the read.

From: sts@ac.net
Message-ID: <35c0f9ce.6296112@news.ac.net>
Source record: 101583

Hello,

I have a very clean Tempo One Hf rig for sale or possible trade. The radio is in excellent condition cosmetically and electrically. Comes with matching speaker/power supply and matching desk mike. Have manual also. Very very clean inside and out with new finals. This is the later version with solid state Bal Mod instead of the 7390 tube. Built in calibrator. VFO is solid state so drift is minimul.

Asking $200 shipped or trade for Yaesu FR101 digital receiver or other older receiver,. Will consider Yaesu FT101 accesories as trade material too such as ext VFO, transverters, scope etc.

Yes, that is one of the reasons why I picked it over a run of the mill
scope.
I am slowly collecting plugins for the beast. Maybe one day I can afford
one of the spectrum analyser plugins, and a TDR would be great for
tracking cable faults. What is the p/n of the TDR plugin?

6032. Hammer HQ-110 FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-31 00:00:00 UTC
From: larry@no.spam
Message-ID: <35c12b4f.388322644@news.pipeline.com>
Source record: 101493

Gentlemen, strangely enough, (at least for a National collector :-)
A quite nice HQ-110 recently started calling my lab/workshop home.

He is a friendly little guy, but my Nationals are getting a
little antsy.... Quite jealous truthfully. :-(
They have never been fond of seeing me spend time with anything but
them....

So: The -110 needs a new home.
This one has good paint and front, (One small bad spot on top, 1/4")
No clock, but good looking and working S-meter.
Has the Q-multiplier, but I'm not sure if it was an option or all
-110's have it. Correct knobs, No mods, no ugly extra holes, etc.
Works pretty well, but like most radios its age, probably needs
some bypass caps and an alignment.

$100 + shipping from 32733 and it gets a new home.
(I'm not really sure what Hammarlund's go for, so if this is way out
of line, please feel free to make an offer.)
Will be happy to consider trade deal for National stuff.
I collect coil-catacomb Nationals, and like many others am still
looking to complete my HRO-60 coil sets.

If no one seems to want it, I'll send it off to E-bay in a few days.

From: Philip Barber <philipbarber@virtech-nh.com>
Message-ID: <6prith$q4v@reddragon.empire.net>
Source record: 101494

Motorola 'Private Line' desktop base station, model L51GJB-20. A real heavy duty antique! All tube, don't know what vintage, but original Motorola manual (included) is dated 7/56. 60 watts, mechanical digital clock built in. Complete except for top cover and 2 knobs. Was working a few years ago, but haven't turned it on since. Probably should be turned on slowly with a Variac to reform electrolytics. Weighs about 100lbs., so local pickup is definitely preferred. Offers? Located in southern NH.

Phil Barber

6034. Military radios FS.

David:
If you are interested in old general coverage AM/CW tube type
receivers, this receiver is a really nice one. Here are a few tips:

A good list or reflector is the hammarlund.qth net. Join it by opening
http://qth.net, and clicking (actually hold the mouse button down)
when pointing to the Select List field, and dragging down to
Hammarlund. Notice the subscribe button. There is lots of SP-600
knowledge there.

The audio output transformer impedance is 600 ohms. Fortunately,
there is an earphones jack . I understand AES now sells 600 to normal
voice coil impedance transformers.

Cases are very uncommon, so don't be surprised that you don't have
one.

The black tubular capacitors are notorious for failing in this
receiver. Most people just replace all of them, a big job. 40 hours is
not an uncommon estimate of time, as some are in difficult to reach
locations. Don't go into the RF deck area blindly, or you will damage
contacts in the RF coil turret. I'm facing this problem, and can pass
along some tips I received recently, if you are interested.

If you decide to not keep it, the receiver is in some demand. It is
not a scarce item like an old HRO, but is not seen frequently at swap
meets, either. I paid $170 for the one I obtained recently at the TRW
swap meet (Los Angeles area), and considered it an ok (but not good)
price for someone who definately wanted one. It had been recapped, but
unfortunately developed a partial short in the RF deck a few operating
hours downstream. Maybe the previous owner missed a capacitor. A
strictly buy/sell list for this type equipment is baswaplist;
subscribe by typing subscribe baswaplist in the body of a message (no
subject) and sending it to majordomo@foothill.net . Another one is
forsale-swap@qth.net Use the qth.net site described above to
subscribe.

TDR plug in is 7S12, which requires a S6 sampling head and a S52
pulse generator head to complete the TDR. They were quite the
tool in there day. They made slower sampling heads and pulse
generators too. The S6 & S52 were the cats tail....
Take Care, Kevin

<snip>

One requirement that I'm aware of is for the unti to be vacuum-tube based, not SandState. Not just tube finals, not just heavy. 830's are a nice radio, but I doubt anyone would sonsider them a boatanchor just because of the 12BY7A and two 6146's in the final amplifier. 940's and '781's are heavy, but they wouldn't be considered boatanchors either. Perhaps in years to come they'll be referred to as 'Big doorstops'? ;)

The real commercial BA's IMHO are the early Nationals - AGS, HRO's, NC-183's, 300's etc., the early Collins receivers up through the S-line, the many Hammarlunds, Hallicrafters, or any of those fine early commercial sets. (not that homebrew wouldn't qualify also, most just disassembled them for their useful parts).

Transmitters the same - those wonderful Collins, Johnson, Hammar, Halli, C.E. rigs, WRL, Heathkit and more.

As far as the oldest, well....Art Collins started building rigs in his basement to sell in 1933 or '34 as I recall, and National was building it's 'Thrill Boxes', the SW-2 and 3, FB7, about the sane time. Hammarlund/Roberts(if memories serves me correctly) may have come sooner, perhaps the late 20's, but more than likely the early '30's. The Comet/Comet Pro comes to mind. There are many more.

I'm a bit behind the curve as far as memory of early BA's. I was born about the time you were licensed. ;) I do still have fond memories of early radios from the QST's given to me by K1EN, Gary Watkins. He was probably my first or earliest 'elmer'. I do recall drooling over the KWM2A in the ads, and marveling at many, many other rigs in the older issues. I've since come to own many of the rigs I thought I'd never see.

Hope this view from 'up narth a ways' answers some of your questions. Perhaps we can rekindle a discussion about BA's, not prices/value/'collectability' *gag*

73 de Todd 'Boomer' Bigelow, KA1KAQ 'The Voice of Vermont'

The earliest boatanchors were home brew. And if you want big, heavy and old, check out the prewar TEMCO stuff.

6050. NEW TECHNICAL BOOK RESOURCE CD'S

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-31 00:00:00 UTC
From: tsm@electrosys.COM
Message-ID: <c=US%a=_ecs%p=ElectroSys%l=WEBMASTER-980731150101Z-58@webmaster.eletrosys.com>
Source record: 101511

Since this august group is always looking to increase their knowledge about electronics, boatanchor radios, tubes and the like, I thought you who might read this may be interested in two new technical book CD-ROMS just recently completed and ready for distribution:

The fabulous Radiotron Designers Handbook, Version 4 (last version), 1953 by Radio Corporation of America. This is the epitome of books on radio circuit design, tubes, and just about every relating to the science of radio. Contains over 1,500 pages. Requires a PC with Windows to use. Nothing is loaded onto your hard drive to clutter it up more than it already is with useless trivial stuff. Runs directly off your CD-ROM player. You can read, enlarge, rotate, view, print a page, print several pages, print a chapter or if you have enough time to spend the rest of your life printing, you can print the entire book. Requires an Internet HTML browser to start it, such as Netscape or Microsoft Internet Explorer. The book is viewed as an executable file with a built-in digital viewer. You can see more data on this at http://www.radioera.com then choose CD's. The price is $ 62 + postage & insurance.

Another new book is the fabulous RCA HB-3 Tube Handbook. This is the motherload of all tube books and is comprised of over 7,000 pages and was printed as a loose-leaf handbook of 10 volumes. If you want tube data, than this is IT! Requires a PC with Windows to use. Nothing is loaded onto your hard drive to clutter it up more than it already is with useless trivial stuff. Runs directly off your CD-ROM player. You can read, enlarge, rotate, view, print a page, print several pages, print a chapter or if you have enough time to spend the rest of your life printing, you can print the entire book. Requires an Internet HTML browser to start it, such as Netscape or Microsoft Internet Explorer. The book is viewed as an executable file with a built-in digital viewer. You can see more data on this at http://www.radioera.com then choose CD's. The price is $ 75 + postage & insurance.

Check out all our boat-anchor CD publications. When you can find a Radiotron handbook they go generally for $ 125 and more and the RCA HB-3's go from $ 150 - $ 200 when and if you can find a complete one (and how would you know since they were a loose-leaf subscription service?).

There is infact a HP-23C as well. The whole HP-23 line was made for the
same purpose, powering the SB line of equipment. I have a PS-23, which
is the same as the HP-23C. Take a look at the following:

"KB9JJA Heathkit Ham Radio Page"
http://members.accessus.net/~dwentz/kb9jja/heathkit

There is a schematic for the HP-23B and a group of service bulletins
for the HP-23 line. There may even be some links for other information.

The "hybrid" rigs that used a combination of vacuum tubes (primarily in their RF stages) and solid-state devices (for most other functions) were introduced as "transition rigs", at a time when high-power RF solid-state devices were unavailable at economical prices (compared to tubes).

> The real commercial BA's IMHO are the early Nationals - AGS, HRO's,

Now you're talking "boatanchors"! <g>
The majority of responses I've received to the question raised regarding "what constitutes a boatanchor?" seem to indicate the "majority opinion" is that the word "boatanchor" best describes the rigs which were made around the 1930's. Some would disagree, however, and they seem to feel that a "boatanchor" describes a rig that uses tubes. There doesn't seem to be any "definitive" answer, really...almost the same as asking the question "what constitutes an antique?". Much of the answer is in the "eye of the beholder".

> Transmitters the same - those wonderful Collins, Johnson, Hammar, Halli,
> C.E. rigs, WRL, Heathkit and more.

Ahhh...the transmitters that really let you know when you key them up! <g>
(i.e., "the lights dim throughout the house"!)

Sorry, that's "before my time"! <g>
But there sure doesn't seem to be much question about whether

such rigs can be considered "boatanchors"....of the finest order!

> Hope this view from 'up narth a ways' answers some of your questions.
> Perhaps we can rekindle a discussion about BA's, not
> prices/value/'collectability' *gag*

Thanks, Todd! It would be nice to see an ongoing discussion here
about "boatanchors"...sharing information, restoration techniques,
experiences with boatanchors, oldest boatanchors owned by those
who participate in this newsgroup, etc. There's a lot of "history"
which can be shared, and learned by many of us.

> >The earliest boatanchors were home brew. And if you want big, heavy and
> >old, check out the prewar TEMCO stuff.

There's a name not seen too often these days!
Perhaps you can share some info on the prewar TEMCO rigs with
those of us who aren't familiar with them?

Dave,

Fun is sure the word. In 1974 I was living in an apartment in the Philadelphia area had a 505 and a run of #28 wire about 150 feet from my bedroom window to the top of a tree. No RF interfearence with this setup and it was very stealthy as you could not really notice the antenna.

I was listening to the 75 meter big guns from New England and Long Island on the lower end of the phone band working into Europe one evening and broke in and asked if they could relay me through to one of the Great Britian stations I was hearing but whom I never thought would hear me... more of an SWL report than anything. This station from Long Island asked everyone to standby and let the QRP station try to cross the pond with 5 watts SSB. I received a 5/5 report from several G stations and it was one of my biggest thrills in ham radio.

#1....Amp Supply LK 500ZC , two 3-500s for about 1200 out with 100 in, instant on, very smooth to tune and operate 160 thru 10 meters, does warcs ok too.Nice full out $950 plus shipping.
#2....AMP Supply LK 500 NTC, no tune amp, just like above except no tuning required$ 995+ship
#3....DRAKE L4B, very nice, STRONG<with two 3-500s, you can get 1500 if you have enough drive(abt 130). 2 piece with separate power supply, chimneys on tubes, can be changed to 2KW out for about $265.oo A hoss!! $795.

I dont have a lot of room to trade but am a trader and will consider anything.......HF or amps. I will espeically trade UP, for HF rigs and some amps. Thanks Murray K5MDM Odessa, Tx

Hi folks,
Family time is more important than ham radio time. I'm cleaning
the shack and down sizing some equipment that I wont be using.
Please email with questions. Terms are check or
money order. Prices dont include shipping. I can ship by what
ever means you like. Net references available.

5. Icom HF solid-state transceiver station including:
Icom 701, PS701 and SM-8 desk microphone. This is a 100W
DIGITAL all solid state HF rig covering 160 thru 10 meters
(excludes WARC bands). Radio covers USB/LSB/CW/CW-N/RTTY and
red LED digital frequency readout.
Has speech compressor, cw-narrow filter,
vox capability. Microphone is a condenser "gooseneck" type
with PTT button on the base. Power supply matches the radio
cosmetically. It is a 13.8V at 20 amps. Power supply also
has big speaker in it, to be used as external station speaker.
Entire setup is very clean--a few minor scratches, but front
panel is perfect. I have the original manual too. This would
make a great setup from Tech plus thru Extra. The rig works
great on SSB with the speech compression, as well as on CW with
the narrow CW filter. The bands are coming back NOW.
Dont miss the action, especially on 10M and 15M!
Entire station (wont split) $425 + 1/2 shipping.

6. Regency CB converted to 10M SSB. Radio runs 15W output PEP
and covers AM and USB. Freq coverage is 28.5-28.8 Mhz in
23 channel increments. Has VFO slider for both TX and RX,
to cover all the in-between and gap frequencies.
Can be easily moved up
or down the band with just a couple $5 crystals (available
from JAN Crystal). Nice SSB tx audio from hand microphone.
Great for mobile/backpacking. Nice cosmetic condition too.
Includes manual, sams photofact, mic, power cord,
and radio. $65 + shipping

7. ECI Fleet Courier 30B 10M/6M AM transceiver.
Cosmetically a beauty.
Electrically a beauty. This is a classic early 1960's tube
"mobile/base" AM HF transceiver. Six crystal-controlled
channels.
Chromed cabinet. Blue front panel with white lettering.
Good cabinet and front panel. Output is 15 watts AM.

Includes microphone, AC power cord, and DC-DC convertor.
This is a classic in very nice condition. Includes 1 set of
crystals (26.1, I think) Asking $45 + shipping.

8. Kenwood AT-120 mobile antenna tuner. Matches the Kenwood
TS-50 in size. Originally for use with Kenwood TS-120 HF
transceiver. Covers 80 thru 10 meters. Includes lighted VSWR
meter, as well as tuner bypass position.
Simple coax in and coax out connections.
Very clean -- works well. Also very close in size to Icom 706
and Alinco DX70 mini HF transceivers making a nice
compact ham station. $80 + shipping (reduced price)

10. Vibroplex #6 "lightning bug" key -- late 1930's vintage with
Japanned base (no gold trim). Keyer is fully functional but
is missing both the original dit arm weight and the vibroplex name
plate. Homebrew dit arm is included. This is a nice bug --
took it in on trade, but decided that I like the auto-keyer
since I get "glass arm" sending with a bug. This one is
probably not collector quality, but works great with my S-line and
gold dust twins. $70 + shipping (reduced price)

14. ICOM IC3N UHF handheld transceiver covering 430-440 Mhz (note the
band, this is for use in Asia, Central, South America, and Europe.
Does "minus 5 megahertz" repeater split and automatically transmits
the 88.5Hz tone burst to open repeaters (as in Japan). Good
cosmetics, good electrical. 3 batteries, radio, antenna, and
wall charger. $99 + shipping

15. JC Penney 981-6247 SSB/AM CB radio -- AC/DC, 40 channel, and
ready to convert to 10 meters. Will include converstion
instructions (only requires a change in the oscillator
crystal). Will also include SAMS photofact. Rig works fine.
Just no time to convert it. Would be great for new novice or
tech plus to try voice on 10M for an inexpensive price. Works
AC and DC (has built in power supply for 120VAC). Includes
hand mic, and AC power cord. Wood grain cabinet. Smaller size,
does not take up much room. Has vol, sql, clarifier, tone, dim,
vswr calibrate, mode switch, pa switch, nb, anl, etc. Again,
excellent for 10M SSB conversion --will include conversion
plans -- simple 2 crystal change and receiver tweak.
Currently still on CB band, but slider in place.
$ 70 + shipping. (price reduced)

16. Regency INFORMANT 1 police radio mobile scanner. Preprogrammed
scanner covering VHF LO and HI bands -- designed for monitoring
state / county police. Simply dial up your state, and the
preprogrammed scanner does the rest....Designed for 13.8VDC
and includes both radio and cig lighter power cord.
$20 + shipping (reduced)

17. Home brew boat anchor power supply -- designed for use with
all HEATHKITS. Much heavier duty than the HP23 supply.
Could also be used with the COLLINS S-line and KWM2
transmitter/transceiver with simple re-wire of the octal
power plug. No schematic, heavy (about 40 LBS), works fine.
$45 + shipping

18. Heathkit MicroMatic CW keyer -- one of the last kits made by
heathkit in 1981. This is the iambic CW paddle and keyer
combo with capacitive cw paddle (keys by hand capacitance,
not mechanical). Keys both boat anchor and modern rigs.
Lots of features: memories and adjustable speed/weighting. This
keyer/paddle combo also has auto-cw practice (great for
upgrading your cw speed and practicing). Includes wall power
supply. Model is SA-5010. Condition is very good. Works
well. $50 + shipping

19. Radio Shack 2M 30 watt amplifier with preamp. Model 19-1122.
0.5-5w input will give 30 watts out. Nice helical front end
and GaAs FET preamplifier cuts down on intermod. In box, brand
new, never opened, never used, tape seal still in place.
Everything included: box, manual, packing material, etc.
Paid $99 new from Radio Shack. 1/2 price - $50 + shipping.

20. Icom HT rapid charger, model BM-82U. Found this in the closet
and dont recall what radio this charged. Does not fit
Icom 2AT/3AT/4AT or 02AT series. Maybe works with
the xSAT series rigs or commercial equivalent ??
$40 + shipping

I'm located in Portland, Oregon.
No LIDS, No KIDS, No SPACE CADETS. NO BAD NEWS either.
Happy to discuss details via email or can call you. Net
references available on items that I've already sold.
